## About ifm...

ifm is one of the world's largest manufacturers of industrial sensors and controls products, producing over 18.3 million products annually.

More than 6,500 ifm employees serve over 140,000 purchasing customers worldwide.

ifm has more than 70 subsidiaries located in all major countries.

Annual global sales exceed \$850 million USD.

Our dedication to innovation, quality and customer support has made us a global market leader.

## The ifm Commitment

**ifm people.** The ifm team of employees is committed to helping you succeed in your business. We directly service and work with over 26,000 customers in North America.

**ifm products.** For over 45 years, ifm has developed, manufactured, and marketed sensors to industries that include assembly and robotics, automotive, material handling, packaging, metal forming, plastics, and food and beverage. We offer a complete family of position sensors, fluid sensors, diagnostic systems, networking products, and wiring solutions.

**Quality.** There can be no compromise in the quality and reliability of sensors that are applied in your production facility. The ifm new product development process incorporates specific testing for sensors and controls to withstand environments with shock and vibration, electrical noise and temperature fluctuations.

**Investment in R&D.** Developing new products that increase uptime and productivity is a core belief of our company. We apply practical innovation to simplify technology and develop products that can have a positive impact on your production process.

**Application know-how.** We have over 45 years of experience in working with industrial automation applications. Our knowledgeable team of technical support engineers will work with you to recommend the right solution, the first time.

**ifm business philosophy.** ifm provides a knowledgeable and courteous service center team to assist with order placement and technical support. We offer an efficient distribution center for accurate and on-time delivery of products. ifm publishes list prices in literature and on our website, and we always stand behind the quality and performance of our products.

**Global presence with local focus.** With more than 6,500 dedicated ifm employees in over 70 countries, you can count on local support all over the world.

**ifm – close to you!**

ifm – the company

Our people and our products are committed to helping you succeed in your business

## Rich History... Promising Future

ifm electronic, the parent company of ifm efector, was founded in 1969.

For over 45 years, ifm has manufactured and marketed electronic sensors and controls for industrial automation applications.

ifm employs over 6,500 dedicated individuals who provide outstanding product support and technical service.

More than 140,000 customers purchase ifm products worldwide.

*ifm North America, established in 1985, has a network of sales offices located in all major industrial markets throughout the US, Canada and Mexico.*

## Reliable Products... Innovative Design

ifm is currently one of the world's largest manufacturers of industrial sensors and controls, producing more than 18.3 million products annually.

ifm offers a broad product range that includes sensors and controls for industrial automation applications.

ifm's core competency for industrial product design is to develop products with robust housings, easy user interfaces and flexible output stages.

ifm makes large investments in R&D and employs over 820 development engineers. Our R&D team has more than 750 registered ifm patents worldwide.

ifm has received multiple awards for innovation and breakthrough technologies.

An ISO 9001:2008 compliant company.

Our dedication to innovation, quality and customer support has made ifm a global leader in sensors and controls.

### ifm Global Presence

Whether you ship your machines internationally or have manufacturing plants all over the world, ifm has local support in over 70 countries.

You can count on ifm anywhere in the world.

ifm – close to you!

## Reliable service from a dedicated team

### Experience the benefits of working directly with the manufacturer

ifm provides high performance products at a great value to help you compete in your business. Since you're dealing directly with the manufacturer, you can expect immediate customer support and competitive pricing. There are no compromises when it comes to our customers' success!

### Quality Assurance

Our products are manufactured with a high level of automation and lean manufacturing principles. ifm development engineers design and test sensors in conditions that far exceed actual application environments. There can be no compromises when it comes to uptime in your facility.

### On-site sales support

You can count on our experienced team of ifm Sales Engineers to understand your applications and challenges. The ifm Direct Sales Team provides on-site application assistance and technical support throughout the U.S.

### Service Center

You can count on our dedicated Service Center Team to provide easy order placement and knowledgeable technical support.

- Our customer service representatives can assist with order placement, product quotes and delivery information.
- Need help with an application? A team of experienced engineers is ready to assist you with technical questions and application solutions.

Our Service Center is staffed from 7:30 am to 6:30 pm EST and covers all time zones in the U.S.

We strive to provide a resolution the first time you call and avoid follow-up phone calls or transfers.

It's our goal to respond to your emails in 15 minutes. Your time is valuable.

Products are available from stock. 90% of customer orders are shipped complete within 24 hours.

You will receive a shipment tracking number within an hour of placing your order.

Your order will be shipped regular ground service. For faster delivery, we offer next business day delivery or 2-day. Just tell us your preference.

**Get to know us...**  
**Discoverifmus.com**  
**800-441-8246**

### Our Mission:

We contribute to our customers' success by providing innovative solutions through continuous development of our people, products and processes.

### The ifm Advantage

ifm has built a business model that focuses on working directly with our customers.

**There are no compromises when it comes to our customers' success.**

### Markets include

- Assembly and robotics
- Automotive
- Food and beverage processing
- Machine tool
- Material handling
- Mobile equipment
- Packaging
- Metal forming
- Plastics

## Process sensors

### Pressure sensors

Pages: 156 - 175

Sensors and transmitters monitor system pressure in hydraulic and pneumatics.

### Flow sensors

Pages: 176 - 191

Flow sensors, magmeters, and ultrasonic flow meters detect the flow rate of liquids and gases.

### Level sensors

Pages: 192 - 207

Point and continuous level sensors detect level of liquids, powders, granular solids and plastics.

### Temperature sensors

Pages: 208 - 225

Modular temperature monitoring products provide feedback in temperature control applications.

## Industrial networks

### AS-i networking

Pages: 226 - 239

Networks sensors and actuators with plug-and-play functionality.

### Safety networking

Pages: 240 - 251

Safety at Work connects safety components directly to the AS-i network.

## RFID systems

### RFID

Pages: 252 - 253

A high frequency or UHF platform. The antennas are able to read/write multiple tags up to 10 meters.

## Machine condition

### Vibration sensors

Pages: 254 - 257

Continuously monitor machine's vibration level to prevent equipment failure.

### efector Metris

Pages: 258 - 259

In-line flow meter monitors compressed air systems and specialty gases.

## Power supplies

### Power supplies

Pages: 260 - 263

Power supplies provide the voltage for sensors, actuators, and other electronic loads.

## Wiring technology

### M8 Pico cordsets

Pages: 264 - 265

Quick disconnect M8 Pico cordsets and field wirable connectors for electrical wiring.

### M8 Pico wiring block systems

Pages: 266 - 269

Quick disconnect wiring blocks offer plug-and-play functionality.

### M12 Micro cordsets

Pages: 270 - 273

4-pin Micro DC cordsets and field wirable connectors.

### M12 Micro wiring block systems

Pages: 274 - 275

4-port and 8-port M12 Micro DC wiring blocks and patchcords.

### 1/2" Micro AC cordsets

Pages: 276 - 277

3-pin Micro AC cordsets and field wirable connectors.

**IO-Link**

# The foundation of Industry 4.0

ifm offers a variety of IO-Link I/O master blocks and IO-Link compatible sensors.

Today's sensors have evolved from standard switches with simple on/off capabilities to highly intelligent devices with built-in microprocessors that process large amounts of data. This data has been trapped with no pathway to the control system ... until now.

## Introducing IO-Link

IO-Link is a communication interface that unlocks trapped data in the existing sensor's electronics and transmits the data via a pure digital signal to the controller. By simply replacing the Ethernet I/O block with a version that has IO-Link capabilities and using IO-Link enabled sensors, the intelligence in industrial sensors is unlocked. IO-Link provides:

- Simple plug-and-play replacement of sensors; easy real-time recipe changes, and diagnostic feedback on the sensor's operation
- Continuous monitoring of machine vibration in real-time allowing equipment to be serviced as needed instead of at scheduled intervals
- A better understanding of the cost of production by monitoring energy usage
- Mass production of quality parts by determining exact tolerances
- Improved product efficiency by tracing valuable assets throughout the manufacturing process

The foundation of Industry 4.0 is utilizing real-time data from the plant floor. By having full access to sensor data and transmitting the data to the controller via IO-Link, plant operators can analyze the data to make adjustments to machines with greater accuracy, eliminate downtime and maximize overall equipment effectiveness.

IO-Link is a worldwide open-standard protocol for connecting sensors and devices and does not require any special wiring.

### To get started...

Use an IO-Link master with existing wiring and IO-Link enabled sensors. LineRecorder device software offers easy and fast parameter setting, and more.

**IO-Link sensors in this catalog are noted with the symbol** 

Company	IO-Link	Position Sensors						Motion Control	Vision Sensors

# IO-Link Benefits

## ► Analog vs. IO-Link digital

**Conventional:** Analog signals require multiple analog-to-digital conversions that affect the accuracy of the sensor's output signal.

**IO-Link:** Requires only one analog-to-digital conversion. This avoids conversion losses of up to 1% accuracy.

## ► Sensor parameterization

**Conventional:** Change parameters via on-board pushbuttons.

**IO-Link:** Sensors can be parameterized remotely by PLC.

## ► Automatic device replacement

**Conventional:** If a sensor needs to be replaced, the sensor must be re-programmed with pushbuttons.

**IO-Link:** Data is automatically uploaded to a sensor. No need for manual parameterization.

## ► Diagnostic information for predictive maintenance

**Conventional:** It is not possible to obtain diagnostic information without changing or adding wiring in the PLC.

Ex. Clean lens 100% excess gain

**IO-Link:** Transfers diagnostic information on existing wiring allowing for predictive maintenance.

Ex. Dirty lens 40% excess gain

**Pure digital signal:** IO-Link transmits a pure digital signal value that is noise-immune and more reliable than conventional analog signals.

**Remote parameterization:** Access to all available parameters of the sensors can be reached through the PLC without the need for external software and local sensor display.

**Simple plug-and-play sensor replacement:** IO-Link restores the sensor or actuator parameters automatically when replacing and servicing the sensors.

**Recipe changes:** Recipe changes can be made to multiple sensors from your controller. Downtime and production changeover is minimized.

**Sensor health:** On existing wiring, additional diagnostic information can be transferred for easier fault location and predictive indication.

**Not a fieldbus dependent system:** IO-Link can be added to most existing control architectures with minimal cost.

## Typical controls architecture

In a standard ethernet architecture, sensors can only transmit simple on / off or analog signals to the plc.

Process instruments use multiple analog cards which increase costs and limit the number of I/O.

## IO-Link controls architecture

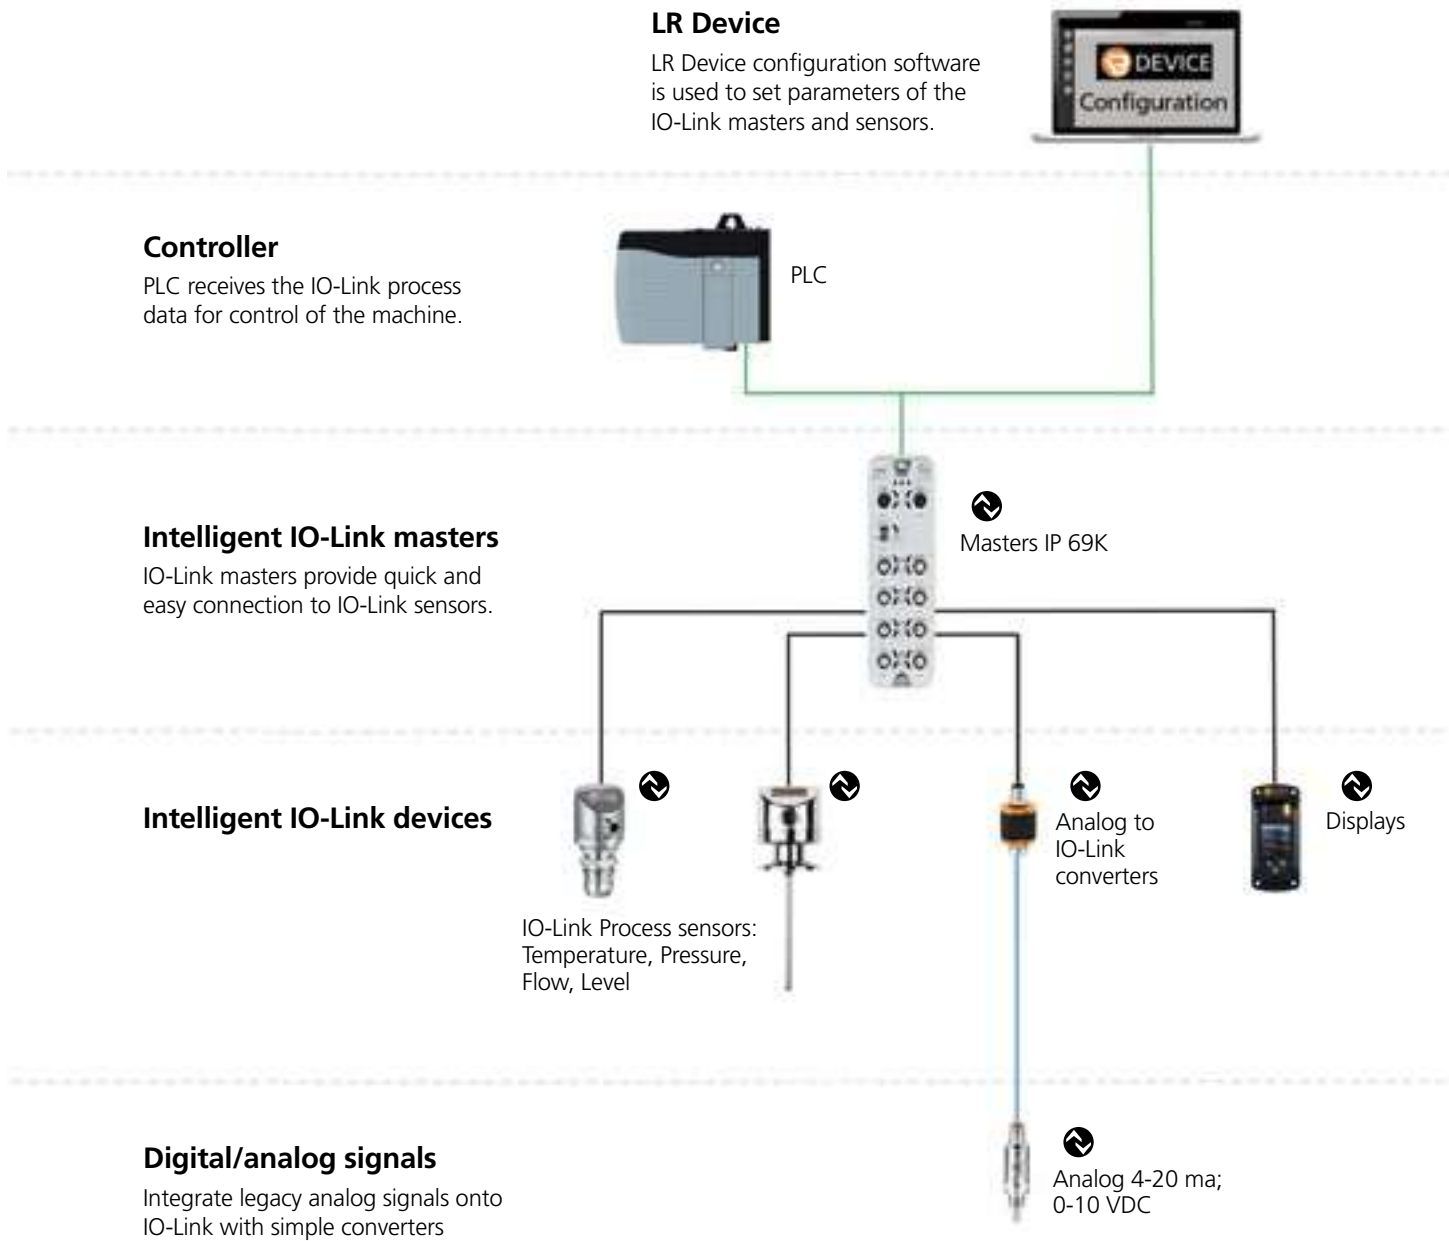

IO-Link is a communication interface that unlocks trapped data in sensors and transmits the data via a pure digital signal to the plc.

An IO-Link Master located in the field near the sensors, uses existing fieldbus protocol, such as Ethernet IP.

# IO-Link – process industry applications

## Cooling water monitoring in the foundry

The cooling system in a typical furnace is critical to its proper machine operation and to the process of producing quality parts. Accurate cooling of the elements improve the life cycle and safety of the machine. In order to do this, several flow parameters of the cooling water, such as temperature and flow need to be accurately monitored. This requires multiple sensors and installation points throughout the machine.

### Additional functions with IO-Link data

ifm's SM magmeter flow sensor via IO-Link transmits flow rate, temperature and a totalizer value using a standard 3-wire cable.

IO-Link eliminates multiple costly analog cards, extra pipe fittings, numerous termination points and excessive stock inventory.

## Media detection in process tanks

The ifm LMT level sensor is used as a switch to determine the low and high level or pump run dry condition in tank applications. Typically, the feedback will be "on" when the media is present and "off" when there is no media.

### Additional functions with IO-Link data

With IO-Link, additional information is accessible from the LMT sensor. The real digital process value is available to determine the type of the media, such as water or milk, etc. The IO-Link value can be used to differentiate between medium and build-up on the sensing face.

Identification of the media is critical, especially in the washing process. Once the media is flushed out of the tank, the cleaning process can be started to maximize production time.

	IO-Link	Position Sensors					Motion Control	Vision Sensors	
Company	IO-Link	Inductive	Capacitive	Cylinder / valve position	Photoelectrics / lasers / fiber optics	Distance / Application specific	Ultrasonic	Encoders / Speed monitors	2D / 3D inspection
1 - 5	6 - 21	22 - 55	56 - 61	62 - 71	72 - 111	112 - 117	118 - 119	120 - 127	128 - 143

## Continuous tank level measurement

The PI pressure sensor provides a 4...20 mA and switching output. Traditional analog signals can be prone to EMC disturbances and need to be scaled to show the real pressure of the system at the plc. High and low pressure spikes are stored in the sensor, which may be an indication of a challenge, but this information has no direct access to the control system.

### Additional functions with IO-Link

With IO-Link, real pressure values can be accessed without the need to scale the signal. For example, a pressure sensor rated from 0 to 100 inH<sub>2</sub>O, the same value range is accurately transmitted to the control system without the need for scaling.

By retrieving high and low pressure values from the sensor, any unexpected pressure spikes and dips can be monitored directly. This is important because it can lead to sensor failure or contaminated products.

## Power supply distribution with T-splitters

- Masters with 4 or 8 configurable ports, IO-Link, digital inputs or digital outputs (< 200mA)
- Standard M12 T-coded power cables reduces cost of power connection (up to 4A)
- IO-Link 1.1 compatible with COM1, COM2, COM3
- 2 Ethernet ports 10/100 Base-TX with integrated switch
- IO-Link Masters and sensors are configurable via LR Device software

Type	Description	Interface	Part No.	List Price (1-pc.)
<b>1</b> IO-Link Master block

# IO-Link – automation industry applications

## Compressed gas meter for recording energy consumption

Leaks are a significant source of wasted energy in compressed air systems, can contribute to problems with system operations and cause system pressures to fluctuate. This, in turn, can lead the air-operated equipment to function less efficiently and possibly affect production. Unnecessary cycling may occur and increase the run time. Maintaining the equipment becomes more critical. ifm's SD air flow sensor allows for the detection and elimination of expensive line leakages.

### Additional functions with IO-Link data

Implementing compressed air monitoring systems are typically cost prohibitive, but with IO-Link this doesn't have to be the situation. Using the SD air flow sensor, IO-Link transmits multiple process values over a single cable, such as flow rate, temperature and totalizer values eliminating numerous and costly analog cards. Since this one sensor can transmit multiple process signals, extra pipe fittings, sensors and wires are eliminated and ultimately streamlines inventory. The savings from detecting wasted energy and reduction in total installation costs allow for a quick return on investment.

## Vacuum sensors monitor suction grippers

PN7 Series vacuum sensors detect the required vacuum for proper operation of suction grippers. If the minimum values are not reached, the suction gripper remains in its initial position so as to prevent damage to the workpieces and systems. The high-pressure compressed air network (175 psi) and the low-pressure compressed air network (87 psi) is monitored.

### Additional functions with IO-Link data

Sometimes a sensor must be replaced and then reconfigured. If the PN7 vacuum sensor needs to be replaced, IO-Link's automatic device replacement feature can copy the parameters to the new sensor. This saves time and prevents possible errors in setting the switch points. The vacuum sensor can also be used as an on/off switch or analog functionality via IO-Link, allowing one sensor to handle both digital and analog applications. IO-Link reduces cost and inventory stocking requirements.

	IO-Link	Position Sensors						Motion Control	Vision Sensors
Company	IO-Link	Inductive	Capacitive	Cylinder / valve position	Photoelectrics / lasers / fiber optics	Distance / Application specific	Ultrasonic	Encoders / Speed monitors	2D / 3D inspection

## Collision check on the assembly platform

Optical distance sensor Series O1D detects if the assembly platform is free of the car body. Before the car body is conveyed within the area, the hanger will be lowered and only then will the car assembly be securely positioned. The mounting position of the O1D is critical and often cannot be parameterized without stopping the assembly line if the application must change.

### Additional functions with IO-Link data

Remote parameterization is key in this application. ifm's O1D distance sensor is mounted in an inaccessible location and cannot be adjusted without stopping the production line.

As different production models are changed within the application, IO-Link enables the sensor's parameters to be changed remotely via the controller. No need to stop the line!

## Standard Line – power supply distribution with T-splitters

- Standard Line masters with 4 or 8 configurable ports, IO-Link, digital inputs or digital outputs (< 200mA)
- Standard M12 T-coded power cables reduces cost of power connection (up to 4A)
- IO-Link 1.1 compatible with COM1, COM2, COM3
- 2 Ethernet ports 10/100 Base-TX with integrated switch
- IO-Link Masters and sensors are configurable via LR Device software

Type	Description	Interface	Part No.	List Price (1-pc.)
<b>1 IO-Link Master block</b>				
	4-port IO-Link master, IP67	Profinet	AL1100	\$249.00
	8-port IO-Link master, IP67	Profinet	AL1102	\$334.00
	4-port IO-Link master, IP67	Ethernet/IP	AL1120	\$286.00
	8-port IO-Link master, IP67	Ethernet/IP	AL1122	\$334.00

## Accessories

- Expand the functionality of IO-Link masters with IO-Link hubs, displays and converters
- LineRecorder Device software for easy parameter configuration of IO-Link sensors and masters

Type	Description	Part No.	List Price (1-pc.)
<b>IO-Link Hubs</b>			
	Input hub – 4-ports; capable of 8 inputs, IP67	AL2400	\$116.00
	Input hub – 8-ports; capable of 16 inputs, IP67	AL2401	\$141.00
	Output hub – 6-ports; capable of 12 outputs, IP67	AL2330	\$180.00
	Output hub – 6-ports; capable of 12 outputs, IP69K	AL2230	\$208.00
<b>Configuration Software</b>			
	LineRecorder Device, software for remote parameter setting and monitoring of all connected sensors. Automatically identifies all IO-Link masters and IO-Link sensors within the ethernet network. Decreases commissioning time; Optimizes the device replacement process; Easy graphical visuals.	QA0011	\$110.00
	USB IO-Link master cable for parameter setting	E30390	\$367.00
	Memory plug to store sensor's parameters for easy upload without a computer	E30398	\$51.00
<b>IO-Link Display</b>			
	Module displays process values of ifm IO-Link sensors – includes full graphic TFT display – mounts in-line	E30430	\$140.00
<b>IO-Link Converter</b>			
	Compact device converts 4...20 mA analog signal to IO-Link communication, M12 connection	DP2200	\$118.00

### **i** Who developed IO-Link?

IO-Link is a consortium of sensors and plc manufacturers dedicated to unlocking the trapped data in sensors. The main goal of the consortium is to enable users to extract sensor intelligence without adding cost.

Safety Technology	Process Sensors					Industrial Networks	ID Systems	Machine Condition	Power Supplies	Wiring Technology

## Top product features!

- Inductive sensors with the longest sensing ranges in the market
- Sensing technology provides same sensing range for all target materials
- Industry standard M12, M18 and M30 diameter housings fit a variety of industrial automation applications
- Wide temperature range for application flexibility
- Robust metal housings are tested to withstand harsh environments and are rated IP 68/69K

## Sensors with extended sensing ranges detect all metals – set new price/performance benchmark

**NEW!** ifm's new line of inductive proximity sensors offers an ideal combination of features, performance and value. The IFS, IGS and IIS Series new technology sensors have extended sensing ranges that enable the sensor to be mounted farther away from a target. This prevents mechanical damage to the sensor from physical impact. The IIS Series has up to 30 mm range, the longest sensing range on the market today.

### K factor 1 sensing technology

Standard proximity sensors have correction factors for sensing ranges depending on the target material. For example, the range for an aluminum target compared to a mild steel target is reduced by 60%. The K=1 technology sensors have a correction factor of one for all metals. The ifm "S" Series inductive sensors provide an equal range for aluminum and mild steel targets.

### Designed for reliable sensing

These sensors resist shock, vibration and electrical noise. They are rated IP68/IP69K against water ingress and resist oils and coolants used in harsh applications.

They feature a high switching frequency and reliably sense metal targets in high speed applications. Moreover, they incorporate a technology that allows them to ignore magnetic fields that can cause false triggers. With a wide temperature range of -40 to 185 °F, the Series "S" inductive sensors can be applied in many applications.

High performance and a low price point, ifm's IFS, IGS and IIS Series inductive sensors can be used as a plant standard—not just a solution for harsh applications.

## Top product features!

- *Stainless steel housing and sensor face withstand physical damage in industrial automation applications*
- *Sensor design dramatically extends life-in-application by a factor of 15 compared to plastic face sensors*
- *Extended sensing ranges increase distance between the sensor and target which increases uptime*
- *Permanent laser-etched part numbers will not wear off over time*
- *360° ring LED for status indication*

## Metal face technology design dramatically improves life-in-application and increases production uptime

In industrial automation applications, plastic sensors can fail from liquid ingress, damage from target impact, and overall wear from high shock and vibration.

ifm's non-contact, zero-leak, all-metal sensors are so robust that they may outlast the life of your machines! Our highly durable, stainless steel sensors are completely sealed against ingress and carry protection ratings of IP67, IP68 and IP69K.

*Metal face technology can dramatically extend life-in-application for the sensor.*

ifm metal face sensors offer reliable performance and durability in tough industrial

applications. Stainless steel construction extends the sensor's life-in-application by a factor of 15 compared to teflon or plastic face sensors. ifm metal face sensors increase plant uptime, and its price point is the best value in the market.

The stainless steel sensors are subjected to a variety of tests that insure reliable performance in application.

- Stainless steel sensor face and housing withstand damage from machining process and moisture ingress.
- Sensor design extends life-in-application by a factor of 15.
- Extended sensing range increases the distance between the sensor and the target.

### Can be used in oils and coolants

## Top product features!

- Extended sensing ranges reduce failure from mechanical damage and increase uptime
- Available in both short and long body lengths
- Wider temperature range of -40...185 °F for greater application flexibility
- Robust industry standard housings are rated IP68 / IP69K and reliably perform in environments with oils and coolants
- Four bright LEDs provide 360-degree visibility for status indication and make troubleshooting in applications easy

## Sensor with extended range reduces failures from mechanical damage

**NEW!** ifm's new line of inductive sensors offers an ideal combination of features, performance and value. A newly patented design provides less temperature drift over a wider temperature range. This improves sensing range tolerance to  $\pm 5\%$ .

The sensors resist shock, vibration and electrical noise. They are rated IP68/IP69K against water ingress and resist oils and coolants used in harsh applications.

ifm's new technology sensors incorporate extended sensing ranges that enable the sensor to be mounted farther away from a target. This prevents mechanical damage to the sensor from physical impact.

Many variables affect sensing range such as temperature. ifm's newly patented design provides a sensor with less temperature drift over a wider temperature range. This improves sensing range tolerance to  $\pm 5\%$  and enables more reliable detection of metal targets.

Metal forming applications

## Top product features!

- *Stainless steel sensor face and housing withstand damage from physical impact in the part loading process in manufacturing cells*
- *High temperature, weld slag resistant coating prevents weld slag from adhering to sensor*
- *Sensor design dramatically extends life-in-application by a factor of 15 compared to Teflon™ and plastic face sensors*
- *Permanent laser-etched part numbers will not wear off over time*

## High performance at a good value

ifm's metal face sensors are designed and tested to provide reliable position detection in the toughest welding and metal stamping applications. The stainless steel sensor face and housing withstand damage from physical impact in the part loading process in manufacturing cells. A high temperature weld slag resistant coating prevents weld slag from adhering to the sensor, eliminating abrasive cleaning techniques.

## The right combination of price and performance

Priced lower than competing metal-faced sensors, ifm's sensors are an exceptional benchmark for value. High performance, longer life-in-application and a low price point. The ifm metal face sensors can now be used as a plant standard – not just a solution for harsh applications.

### Challenge

*Plastic and teflon sensors life expectancies are reduced from weld-slag build-up and physical impact from the part-loading process in manufacturing cells.*

### Solution

*The ifm metal forming sensor's stainless steel construction and high temperature weld-slag resistant coating withstands damage from impact and weld slag build-up.*

## Designed and tested to increase life-in-application

### ifm Impact Test

*Sensors are hit twice every second by a 1 kg hammer. This represents the force of a large part being loaded in a cell. ifm's sensors can withstand 500,000 impacts compared to plastic face sensors that failed after 32,000 impacts.*

### ifm Abrasion Test

*Sensors are scoured with wire wheel brushes for 1 million passes to simulate abrasive cleaning processes.*

## Top product features!

- Inductive sensor with IO-Link precisely monitors target position with high linearity and repeatability
- Digital transmission of target distance eliminates analog signal drift and noise
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Output function and polarity selectable via IO-Link
- Wider temperature range of -40...185 °F for greater application flexibility
- Rated IP 68 / IP 69K and reliably perform in oils and coolants environments

## Precise position sensing on machines

**NEW!** ifm's new inductive sensors with IO-Link incorporate several functions in one unit. They can be utilized as switching sensors with an adjustable switch point or target window.

The output signal can be set to normally open or normally closed and PNP or NPN switching. IO-Link also allows output on-delays and off-delays to be programmed. Additionally, these inductive sensors can be applied as a measuring system with the target distance value transmitted digitally via IO-Link.

### Highest precision

ifm's IO-Link inductive sensors can precisely detect minute changes in target position. Even spindle runout or the tension of circular or band saw blades is reliably detected.

An alarm can be set if the target leaves the target window or comes too close to the sensing face. All data acquired can be transmitted via IO-Link and recorded.

IO-Link provides the foundation for Industry 4.0 and allows the precise detection of the target with greater accuracy and maximizes overall equipment effectiveness.

Robust industry standard housings, ifm's new inductive sensors detect runout in rotating mechanical systems leading to improved tool life and higher quality manufactured parts.

Oils and coolants applications

## Top product features!

- Extended sensing ranges increase distance between the sensor and target which increases uptime
- Models with robust 316 stainless steel housings withstand aggressive oils and coolants
- Models with chip-resistant ceramic sensing faces
- K=1 sensing technology provides same sensing range for all target materials
- Industry standard M12 Micro DC connectors

## Robust sensors for oils and coolants

The oils and coolants used in metalworking applications can penetrate into the housing of a sensor resulting in component failure and sensing range fluctuations. Through research and experience, a number of oils and coolants were identified that were used by industry leaders.

ifm's sensors were completely submerged in these oils and coolants at a temperature of 176 °F. The sensor's zero-leak design was verified by measuring the sensing range after prolonged exposure in the chamber. The sensors passed this test with no change in sensing range characteristics.

## K factor 1 sensing technology

Standard technology proximity sensors have correction factors for sensing ranges depending on the target material. For example, the range for an aluminum target compared to a mild steel target is reduced by 60%. The K=1 technology sensors have a correction factor of one for all metals. Therefore, these sensors have an equal range for aluminum and steel targets.

## Tested for oils and coolants

**High temperature IP68 coolant test**  
Sensors are submerged in industrial oils and coolants at 176 °F. The sensors successfully pass the test and maintain sensing characteristics.

**1000-hour cycle test**  
Sensors are cycled between -30 °C and 70°C to apply stress on the electronic and mechanical components and to check overall design integrity.

## Top product features!

- Analog sensors with precise linear output signals
- 4...20 mA and 0...10 V analog output models in M12, M18 and M30 housings
- Four LEDs provide 360-degree visibility
- Wide temperature range enables sensors to withstand harsh conditions
- Use with ifm's ecolink M12 Micro DC cordsets

## Analog sensors

ifm efector's inductive proximity sensor family includes models with analog output. Both 4-20 mA and 0-10 V output versions are available in 12, 18 and 30 mm diameter body styles. The sensors feature a linearity error of  $\pm 1\%$  or  $\pm 3\%$  depending on the model.

Linearity describes how closely the actual analog output of the proximity sensor mirrors a straight line drawn from the start point of the operating range ( $s_{min}$ ) to the end point of the operating range ( $s_{max}$ ).

- ① Operating range – LED on
- ② Warning range – LED flashes

$s_{min}$  = start point of operating range  
 $s_{max}$  = end point of operating range

### LED Indication

The analog proximity sensor contains a single yellow LED. The LED is "on" when a target is within the specified operating range and the LED flashes when a target is not present or out of range. For example, the 30mm sensor has an operating range of 1mm ( $s_{min}$ ) to 15mm ( $s_{max}$ ). If the sensor is <1mm or >15mm from the target, the LED will flash. The LED will be "on" if the target is within the operating range (1mm to 15mm). Note: this example assumes a mild target. Standard material and size/shape correction factors apply to this sensor.

### Analog Sensors solve a variety of applications:

**Converting linear motion into an analog signal:** The distance between the sensor and target can be continuously monitored by an analog input card. Multiple switch points can be programmed if needed.

**Sorting product by material:** Targets with different material correction factors will have different curves when the output (current or voltage) is plotted versus the sensing distance. If the sensing distance is constant, targets constructed of dissimilar material will give different outputs and can be distinguished.

**Sorting product by height:** Targets constructed of the same material, but with different heights or thickness, can easily be sorted.

**Concentricity monitoring:** Analog proximity sensors can determine if rotating concentric targets go "out of round."

## Top product features!

- Extended sensing ranges reduce failure from mechanical damage and increase uptime
- Models available in universal voltage with a range of 20...250 V AC/DC
- Industry standard M12, M18 and M30 diameter housings to fit a variety of industrial automation applications
- Available in quick disconnect and prewired options – visit [www.ifm.com/us](http://www.ifm.com/us) for more sensor options
- Robust metal housings are designed and tested to withstand industrial automation applications

## Flexible mounting and quick installation

A three-piece solution provides flexible mounting and quick installation. ifm has developed accessories and connectors to simplify the installation process for inductive proximity sensors. The overall installation time of a proximity sensor can be further reduced by utilizing ifm efector's quick disconnect cordset for "plug and play" wiring.

### Sensing range is determined by the physical size of the sensor

The strength of the radiated sensing field is a function of the size of the core in the sensor. Larger sensors have larger cores, and therefore, longer sensing ranges.

## Select from three brackets for installation flexibility

ifm's snap clamp allows quick replacement of a switch with no tools or mounting nuts. The clamp features a "positive stop" that provides exact placement every time.

Metal quick mount sleeve features a "positive stop" for accurate placement every time.

L-Bracket secures tubular sensors and mounts quickly.

## Robust housings designed and tested for industrial automation

ifm's prewired tubular sensors provide reliable position detection throughout the industrial automation process. The robust, metal housings are ideal for tough applications found in robotics, packaging, assembly automation and material handling.

Extended sensing ranges allow the sensors to be placed farther away from a target which reduces the chance of damage from physical impact. The sensor's high-flex PVC cable can withstand repetitive movement.

### Sensing range is determined by the physical size of the sensor

The strength of the radiated sensing field is a function of the size of the core in the sensor. Larger sensors have larger cores, and therefore, longer sensing ranges.

## Top product features!

- Small package, large sensing range! Compact design is ideal for applications with limited mounting space
- Sensors retrofit V3 mechanical switches which increases uptime and reduces installation time
- Wiring flexibility – sensors available with quick disconnect or prewired 300 mm cable with M8 Pico connector
- Robust industry standard housings designed and tested to withstand industrial automation environments
- Plastic and metal housings to suit application needs

## Compact sensors with powerful performance

ifm efector's small rectangular proximity sensors are ideal for sensing the "open" and "closed" positions of a rising stem valve. The housing design of the IS Series family is a direct replacement for V3 style mechanical devices. The sensors are based on standard inductive technology and are mounted in the valve top for non-contact sensing of the stem.

ifm proximity sensors are designed as a sensor "system" with surface-mounted components on flexible polyamide film. All elements are carefully matched to expand and contract together, minimizing the effects of thermal shock. Sensors with an IP67 rating are constructed to withstand washdown conditions.

Compact rectangular sensors can be mounted in the valve top for non-contact sensing of the stem.

## Top product features!

- ID and IM Series feature extended sensing ranges that reduce failure from mechanical damage and increase uptime
- IM Series "cube" sensing face can rotate in one of five different directions for application versatility
- IM "cube" easily retrofits limit switches using only half the space
- K=1 sensing technology provides same sensing range for all target materials
- ID unit with terminal chamber offers convenient wiring of various lengths

## Rugged housing for industrial applications

IM rectangular inductive proximity sensors feature extended sensing ranges for rugged industrial automation applications. The sensor can be placed farther away from the target which provides protection against mechanical damage in applications such as conveying.

Ideal for packaging lines and conveying applications, the IM "Cube" sensor offers two corner-mounted LEDs to indicate power and output.

### Compact size, long sensing range

The compact sensor "cube" measures 40 x 40 x 66 mm and features a sensing face that rotates in one of five different directions. An integrated mounting bracket offers simple installation and the sensor can be rotated in one of five directions for application versatility.

The ID unit is ideal for floor conveyor applications. The ID also has a "mechanical quick disconnect" feature; it snaps onto a mounting bracket, or DIN rail, so any damaged sensor can be replaced in seconds.

### Flexible mounting options

The IMC "Cube" sensor can rotate in one of five different directions for application versatility.

### PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

Part no.: EVCO1E (5 meters)

List price (1-pc): \$19.00

## Top product features!

- Analog sensors with precise linear output signals
- 4...20 mA and 0...10 V analog output models
- Two corner-mounted LEDs indicate power and switching status
- "Cube" sensor features sensing face that rotates in one of five directions
- Use with ifm's ecolink M12 Micro DC cordsets

## Analog sensors

ifm efector's inductive proximity sensor family includes models with analog output. Both 4-20 mA and 0-10 V output versions are available in rectangular housings. The sensors feature a linearity error of  $\pm 1\%$  or  $\pm 3\%$  depending on the model.

Linearity describes how closely the actual analog output of the proximity sensor mirrors a straight line drawn from the start point of the operating range ( $s_{min}$ ) to the end point of the operating range ( $s_{max}$ ).

- ① Operating range – LED on
- ② Warning range – LED flashes

$s_{min}$  = start point of operating range  
 $s_{max}$  = end point of operating range

### LED Indication

The analog proximity sensor contains a single yellow LED. The LED is "on" when a target is within the specified operating range and the LED flashes when a target is not present or out of range. For example, the 30mm sensor has an operating range of 1mm ( $s_{min}$ ) to 15mm ( $s_{max}$ ). If the sensor is <1mm or >15mm from the target, the LED will flash. The LED will be "on" if the target is within the operating range (1mm to 15mm). Note: this example assumes a mild target. Standard material and size/shape correction factors apply to this sensor.

### Analog Sensors solve a variety of applications:

**Converting linear motion into an analog signal:** The distance between the sensor and target can be continuously monitored by an analog input card. Multiple switch points can be programmed if needed.

**Sorting product by material:** Targets with different material correction factors will have different curves when the output (current or voltage) is plotted versus the sensing distance. If the sensing distance is constant, targets constructed of dissimilar material will give different outputs and can be distinguished.

**Sorting product by height:** Targets constructed of the same material, but with different heights or thickness, can easily be sorted.

**Concentricity monitoring:** Analog proximity sensors can determine if rotating concentric targets go "out of round."

## Top product features!

- ID and IM Series feature extended sensing ranges that reduce failure from mechanical damage and increase uptime
- IM Series "cube" sensing face can rotate in one of five different directions for application versatility
- IM "cube" easily retrofits limit switches using only half the space
- IM "cube" with two corner-mounted bright LEDs indicate power and switching status
- ID unit with terminal chamber offers convenient wiring of various lengths

## Robust rectangular sensors easily retrofit limit switches

Smaller and more robust than traditional limit switches, ifm's IM Series rectangular inductive proximity sensors feature extended sensing ranges for industrial automation applications. Both ID and IM Series sensors offer extended sensing ranges that allow them to be placed farther away from the target which provides protection against mechanical damage. Ideal for packaging lines and conveying applications, the sensors offer bright LEDs to indicate power and output.

Traditional limit switches are large with moving parts.

IM Cube is compact with no moving parts.

## Application flexibility

The IM "Cube" sensor can rotate in one of five different directions for application versatility.

## Top product features!

- Ring and tube inductive sensors detect metal objects inside tubing
- Static and dynamic versions with extremely quick response times
- High resolution – even steel balls with 0.6 mm diameters can be detected
- Pulse stretching and sensitivity adjustable via potentiometer
- Normally open and normally closed options available in varying diameters and connection options

## ifm's ring and tube inductive sensors are ideal for feeder process applications

ifm's ring and tube inductive sensors detect small metal objects that pass through tubing. These sensors are ideal for assembly automation applications that include feeder processes and parts counting. Two output versions are available: static and dynamic.

### Static and dynamic operating principal

**Static sensors** operate like an inductive proximity sensor and generate an output signal when there is metal in the detection zone. These sensors can be used for a variety of feed applications that include detecting falling screws or monitoring for jams. Static-style sensors are also used in wire-brake detection applications.

**Dynamic sensors** are used when very small parts with low mass or fast-moving parts need to be detected. When the sensor detects a part, it generates an output, which is adjustable from 0.1 to 150 ms. The resolution is also adjustable for the application needs and will remain stable, even in the case of metal contamination in the tube.

### Ring and tube sensors with high resolution

Ideal for assembly automation applications that include feeder processes and parts counting.

## Application solutions

Ring sensor detects parts in hoses

Tube sensor detects parts in feed hose

Wire break detection

## Top product features!

- Ideal for sensing non-metallic objects such as plastic, glass, wood and paper
- Robust stainless steel housing withstands harsh industrial environments
- Potentiometer enables easy sensitivity setting
- High performance PEEK sensing face
- 4-port LED for 360° visibility

## Capacitive proximity sensors detect the position of non-metallic objects

Capacitive proximity sensors use non-contact sensing and solid state circuitry to ensure durability in the most aggressive environments.

In contrast to inductive sensors, which detect metallic objects, capacitive sensors can detect almost any material. They are used in the wood, paper, glass, plastic, food, and chemical industries.

### Potentiometer adjustment

The sensors feature a potentiometer that adjusts the sensitivity of the sensor. This feature allows the sensor to be precisely tuned for a specific application.

### Improved noise immunity

Switching power supplies, variable frequency motor drives, and high-powered communication devices are found in most industrial plants. These devices can generate high noise levels contributing to erratic sensor operation.

As a result, ifm's patented "charge balance" circuit design offers reliable noise immunity and enables ifm capacitive sensors to perform effectively in high noise level environments.

### PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

Part no.: EVC01E (5 meters)

## Top product features!

- A reliable alternative to mechanical and optical touch sensors using dynamic and static sensing principles
- Sensor is actuated with a light touch of a single finger
- Housing is resistant to impact and wear, rated IP69K for water ingress
- Dynamic sensing principle ignores build-up on sensing face
- M22 x 1.5 threads allows direct mounting in many areas

## Cylindrical capacitive touch sensitive sensors for machine start / stop with light finger touch

The KT Series capacitive touch sensors are used for starting and stopping machinery, assembly lines and processes. When compared to mechanical pushbuttons, the KT Series sensors offer many advantages. Utilizing the capacitive principle, the KT Series sensors are electronic sensors with no moving parts to wear out. The completely sealed device is rated IP69K, prevents oil ingress and ignores build-up on the sensing face. KT Series sensors use roughly half the space of mechanical pushbuttons freeing up valuable space behind panels.

### Dynamic, static and latching sensing principles provide reliable operation

ifm offers three types of devices for start / stop control.

- KT sensors utilizing the dynamic principle give a 300 mS output signal when touched. This principle allows the sensor to ignore build up on the sensing face and suppress interference such as water, layers of ice, or particles that can stick to the sensor face. Even if the operator is wearing a glove, the sensor will trigger.
- The output for KT sensors using the static principle remain on for as long as the sensing face it touched.
- When touched, the output of KT latching sensors changes state and remains in that state until touched again.

### Versatile and simple mounting

The KT Series capacitive touch sensors have a M22 thread along the entire length of the housing. Simply screw the sensor into a M22 tapped hole until it bottoms out. There is no need to worry about the alignment of the sensing face as the symbol disc is snapped in place after mounting. KT Series capacitive touch sensors may also be mounted in through holes 22.5 mm or larger by using the supplied lock nut.

Mechanical machine start/stop buttons are susceptible to wear and tear. ifm's cylindrical touch sensitive sensors operate without wear because they react to light contact for actuation and therefore provide a long life-in-application.

## Top product features!

- A reliable alternative to mechanical and optical touch sensors using dynamic and static sensing principles
- Ergonomic design allows sensor to be actuated with a single finger or hand
- Robust polycarbonate housing is resistant to impact and wear, rated IP69K
- Dynamic sensing principle ignores build-up on sensing face
- Optical feedback provided by switching status LEDs

## Capacitive touch sensitive sensors for machine start / stop with light hand touch

Machine operators often require simple start / stop control of their plant machinery by simply pushing or pressing a large button. Traditional mechanical start / stop buttons are often used but these devices are susceptible to wear and tear. ifm now introduces the KT Series capacitive touch sensitive sensor that operates using non-contact sensing and solid state circuitry. With this design, the KT touch sensors will respond with simply a single finger or light touch of the hand, providing an ergonomic advantage.

### Designed to provide long-life in application

The KT's robust housing is made of scratch-resistant polycarbonate. The completely sealed device is rated IP69K, prevents oil ingress, and ignores build-up on the sensing face.

### Dynamic and static sensing principles for reliable operation

ifm offers two types of devices for start / stop control.

- KT sensors utilizing the dynamic principle give a 300 mS output signal when touched. This principle allows the sensor to ignore build up on the sensing face and suppress interference such as water, layers of ice, or particles that can stick to the sensor face. Even if the operator is wearing a glove, the sensor will trigger.
- The output for KT sensors using the static principle remains on for as long as the sensing face it touched.

### Easy mounting

KT sensors are easily mounted directly to a wall or in other areas with an L-bracket specifically designed to fit the KT. Cover rings in a variety of colors are also available for function association.

Mechanical machine start/stop buttons are susceptible to wear and tear. ifm's KT Series touch sensitive sensors operate without wear because they react to light contact for actuation and therefore provide a long life-in-application.

## Top product features!

- *Magnetic T-slot sensors offer significant advantages over Reed switch technology*
- *Mounts into any cylinder type – smooth, tie rod, dovetail and integrated profile – using ifm mounting accessories*
- *Quick installation! Sensors mount directly from the top of the cylinder – no need to remove end caps*
- *Excellent repeatability and fast response times enable increased uptime*
- *Unlimited number of switching cycles extends life-in-application*

## Compact housing, simple mounting

ifm offers miniature T-slot cylinder sensors that easily fit into slot-style cylinders to provide a low-profile mounting. The sensors sit flush against the cylinder slot which prevents physical damage in harsh industrial environments.

### Technology comparison

	Reed	ifm Solid State	Solid State Advantages
Durability	Low (1-2 M cycles)	High (unlimited cycles)	ifm cylinder sensor has unlimited number of cycles. Typically, a reed switch is replaced many times during the life of a cylinder.
Repeatability	Low	High	Provides excellent repeatability. Mechanical wear in reed switches can cause the switch point to drift.
Response Time	Low	High	Fast response time. Reed switches with slower response times cannot maintain their accuracy in high speed applications.
Sensitivity	Low	High	Can operate reliably with weak magnetic fields. Reed switches require great magnetic strength for sensing.
Temperature Stability	High	High	Extremely stable operating characteristics over a wide temperature range.
Longevity	Low	High	Immunity from long-term effects of magnetic fields. Contacts on reed switches can become permanently magnetized over time.

### MK sensor for welding

Weld field immune sensor's PTFE tubing protects cable damage due to weld slag.

### MK dual sensors reduce wiring

Two cylinder sensors per port allows more points and less wiring.

### Mounting comparison

**Conventional sensors:** Cable and mounting screw are placed at opposite ends of the housing. If the cable is pulled, the sensor can be dislodged.

**ifm top-loading sensors:** Cable and mounting screw are at the same end. If the cable is pulled, the sensor stays put.

## Top product features!

- Magnetic C-slot sensors offer reliable sensing with no moving parts
- Fits all standard cylinders with 4 mm diameter C-slots
- Quick installation! Sensors easily slide into the top of the cylinder – no need to remove end caps
- Excellent repeatability and fast response times enable increased uptime
- Unlimited number of switching cycles extends life-in-application
- Dual cylinder sensor versions simplify wiring – 2 sensor elements

## Compact housing, simple mounting

ifm offers miniature C-slot cylinder sensors that are available in flush mount and non-flush mount models. Flush mount sensors are designed for standard C-slot cylinders. Non-flush mount sensors easily fit into small grippers and short stroke cylinders.

### Technology comparison

	Reed	 ifm Solid State	Solid State Advantages
Durability	Low (1-2 M cycles)	High (unlimited cycles)	ifm cylinder sensor has unlimited number of cycles. Typically, a reed switch is replaced many times during the life of a cylinder.
Repeatability	Low	High	Provides excellent repeatability. Mechanical wear in reed switches can cause the switch point to drift.
Response Time	Low	High	Fast response time. Reed switches with slower response times cannot maintain their accuracy in high speed applications.
Sensitivity	Low	High	Can operate reliably with weak magnetic fields. Reed switches require great magnetic strength for sensing.
Temperature Stability	High	High	Extremely stable operating characteristics over a wide temperature range.
Longevity	Low	High	Immunity from long-term effects of magnetic fields. Contacts on reed switches can become permanently magnetized over time.

### MK dual sensors reduce wiring

Two cylinder sensors per port allow more points and less wiring.

### Mounting comparison

**Conventional sensors:** Cable and mounting screw are placed at opposite ends of the housing. If the cable is pulled, the sensor can be dislodged.

**ifm top-loading sensors:** Cable and mounting screw are at the same end. If the cable is pulled, the sensor stays put.

## Top product features!

- Inductive sensing technology provides non-contact detection of valve position
- One sensor provides two separate outputs indicating open/closed position
- Sensor and target puck feature low-profile design that's 1/4 the size of switchboxes
- Bright LEDs on sensor indicates open/closed valve position
- No open cavities, completely sealed against the effects of liquids

## Quarter-turn valve position sensors

Quarter-turn valves with pneumatic actuators are used for process control in industrial automation. Typical applications for these devices include tank farms, diverter valves, valve skids and valve banks.

Traditional valve position feedback solutions can include large switchboxes. These high-maintenance packages are mounted on top of the actuator and use mechanical devices and cams to indicate valve position. Since the mechanical arm must make physical contact with the cam, it can stick, bounce, or actually break. If the switchbox fills with water, other problems can occur including corrosion, loss of signal, and short circuits.

ifm efector's IN Series proximity sensors work on a non-contact sensing principle, and because there are no moving parts, they are less likely to become misaligned, wear out, or break. The IN Series is also unaffected by water ingress because of its completely sealed construction.

An ifm valve position feedback solution includes a sensor, cable assembly and a rotating target puck.

- Step 1** Select an ifm valve position sensor
- Step 2** Select a target puck
- Step 3** Select a cordset

**Challenge:** Limit switches physically contact cams to indicate valve position. These mechanical switches can stick, break and wear.

**Solution:** ifm efector's inductive sensing technology provides non-contact sensing of valve position. With no physical contact, the sensor has a long life-in-application.

### How does it work?

A rotating puck, which is mounted on the actuator stem, contains two stainless steel targets positioned 90° apart on the puck at different heights.

As the valve opens and closes, the puck rotates, moving a target in front of the sensor providing valve position feedback.

## Top product features!

- Actuator Sensor-interface networks an entire system of valves
- Non-contact sensor detects open and closed position of quarter-turn valves
- AS-i networking connects up to 62 quarter-turn and 62 solenoid valves
- Connects to DeviceNet, Profibus, and Ethernet
- Parallel wiring is replaced by a 2-wire cable carrying both data and power

## Integrated AS-i networking connection for pneumatic valves

Valve applications such as tank farms and valve skids require a large number of feedback devices. These devices are connected back to a PLC which monitors valve position. With the growing number of valves being used and minimal plant floor space available, wiring has become time-consuming and difficult to troubleshoot. To reduce wiring, a simple solution is to apply the AS-i networking system.

AS-i networks an entire system of valves with only one 2-wire cable, completely eliminating wire bundles. Valve position sensors with AS-i connectivity provide an integrated connection for the solenoid valve. Connection to the control unit is made with a 2-wire AS-i cable.

This solution provides remote indication of valve status and can connect to higher level bus systems via DeviceNet, Profibus, and Ethernet. Up to 62 quarter-turn valve feedback devices and 62 solenoids can be connected to one AS-i master.

- Connects to higher-level bus systems
- Provides non-contact valve position
- Sensor and puck feature low-profile design that is one-quarter the size of a switchbox
- The valve sensor uses an integrated output for the solenoid valve.
- Mounts on all ISO standard type actuators.

Please refer to pages 202 -217 for more details and products for AS-i networking.

An ifm AS-i valve feedback solution includes a sensor, cable assembly, rotating target puck and AS-i cable

- Step 1** Select an ifm valve position sensor
- Step 2** Select a target puck
- Step 3** Select a DIN-style connector

## Top product features!

- Industry standard 12 mm diameter housing provides simple mounting
- LEDs indicate power, output and marginal signal for easy installation and maintenance
- Durable metal housing resists mechanical damage
- Adjustable sensitivity enables greater accuracy for reliable target detection
- Alarm output alerts user when signal is marginal due to sensor misalignment or cleaning

## Simplified alignment and maintenance

OF photoelectric sensors include signal strength monitoring capabilities with LED indications that simplify installation, identify fault conditions, and provide output status. The sensor provides predictive maintenance to increase uptime throughout the production process. In applications where dust, dirt or moisture accumulates on the lenses, the OF sensor continuously monitors the strength of the received signal.

### Ease of installation

For quick setup and alignment, the OF sensor will indicate a green LED when mounting is optimal and when power is on.

### Ease of predictive maintenance

Quickly identify fault conditions that can cause downtime in your production process. The strength of the returned signal can be seriously degraded in applications where dust, dirt or moisture accumulates. Under marginal operating conditions, a red LED provides a visual warning.

### Ease of setup

The OF photoelectric has a yellow LED that indicates the status of the sensor output. If an overload or short circuit fault occurs at the sensor output, the yellow LED will flash at a 3 Hz frequency.

## Compact and reliable

Designed for industrial automation applications, the robust OF photoelectric sensor features a metal housing with bright LEDs for simple alignment and fault indication.

## Technical Specs

Supply voltage: 10...36 VDC  
 No. of wires: 3-wire; Part No. OF5021: 2-wire  
 Maximum load current: 200 mA  
 Voltage drop: <2.5 V  
 Leakage current: Negligible  
 Connector: M12  
 Housing material: Optalloy-plated brass  
 Lens material: PMMA  
 Operating temperature: -13...140 °F (-25...60 °C)  
 Protection: IP65

**On-time delivery with accuracy**

## Top product features!

- Robust photoelectric resists mechanical damage
- Metal M18 mounting threads will not strip – eliminating a common problem with plastic threads
- Long sensing range in a small package offers more application flexibility
- Powerful visible red light source with large spot diameter enables easy alignment and quick setup
- Industry standard M12 connector withstands high torquing and provides easy maintenance

## Durable metal housings with long sensing ranges

ifm's OG Series photoelectrics are stronger and more durable than traditional plastic housings. The sensor's durable metal M18 mounting threads will not strip – a common problem with plastic threads. Its standard M12 connector withstands high torquing and provides quick wiring.

OG sensors are more durable than plastic housings that can wear or break over time.

## Reliable performance regardless of target color

\* The 100 mm sensing range background suppression model is rated for  $\pm 10\%$  of nominal sensing range for all target colors.

## High performance background suppression

The OG background suppression sensor uses diode array technology that enables the sensor to differentiate between the target and the background regardless of background color.

## Top product features!

- 316 stainless steel housing designed and tested to withstand industrial automation applications
- Industry standard 18 mm diameter photoelectric suits a variety of applications
- Extremely long sensing ranges for application flexibility
- Innovative two-pushbutton 'Teach Mode' offers simple adjustment for quick setup
- Flexible mounting bracket system simplifies installation

## Innovative teach mode

ifm's OG M18 tubular sensors are designed to provide reliable position detection in factory automation applications. The sensor's innovative two-pushbutton 'Teach Mode' operation establishes light-on / dark-on programming with the press of a button. This functionality eliminates traditional teach programming that can be complicated and difficult to apply.

The innovative teach method eliminates complex programming. The sensor features one button each for teaching a precise on and off state for the sensor signal. For example:

- OUT-off**  
Mount and align the sensor in the application. The sensor's visible red light simplifies adjustment. Press the OUT-off (*output off*) button for two seconds.
- OUT-on**  
Position the object to be detected. Press the OUT-on (*output on*) button. The sensor is now ready for operation.

For precise sensing applications, the background suppression models provide high accuracy. The sensor's microprocessor provides automatic calibration and can differentiate between the target and the background which is ideal for conveying applications.

## Bracket system offers accurate alignment

Innovative mounting brackets offer quick installation and setup. The bracket rotates 360° in each of two axes to achieve the most accurate alignment.

## Top product features!

- Class 1 laser light source detects small objects and provides visual indication of beam alignment
- 316 stainless steel housing designed and tested to withstand industrial automation applications
- Extremely long sensing ranges for application flexibility
- Innovative two-pushbutton 'Teach Mode' offers simple adjustment for quick setup
- Flexible mounting bracket system simplifies installation

## Class 1 laser sensors detect small parts at long distances

Laser sensors are used where detection of small objects or precise positioning is required. Laser light consists of light waves of a single wavelength, high in energy and power density because the waves are in phase with each other. This results in a tightly focused, almost parallel light beam that can detect very small objects at long ranges.

An important feature of the laser is that the light beam is visible, and during set-up of the sensor, the laser power is increased. This provides a bright light spot clearly visible even in the daylight which aids alignment. ifm efector also offers fine adjustment mounting brackets that allow the laser sensors to be precisely aligned for optimum performance.

The OG Series laser sensors are listed as FDA Class I Laser Products and comply with the international standard IEC60825 and European standard EN60825 which describe the operation of laser sensors.

## Innovative teach mode

The innovative teach mode eliminates complex programming. The sensor features one button each for teaching a precise on and off state for the sensor signal.

### PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

## Top product features!

- Compact M18 diameter photoelectrics withstand harsh environments
- Simple two-wire AC design does not require grounding wire allowing quick installation
- Tubular versions offer application flexibility
- Long sensing ranges reduce failure from mechanical damage and increase uptime
- Integrated microprocessor-based electronics offer high performance in the toughest applications

## Compact solutions for industrial environments

ifm's M18 diameter sensors are designed to provide reliable position detection in harsh industrial applications.

The product family offers long sensing ranges that increase the distance between the sensor and the target, preventing failures from physical damage. Integrated microprocessor-based electronics offer high performance in the toughest applications.

The OG tubular's 2-wire design simplifies wiring. No ground wire is required.

- Industry standard 18 mm diameter tubular housing
- Automatic pushbutton provides easy setup adjustment and simplifies installation
- One-piece molded unit is completely sealed against environment
- Electronic lock prevents unauthorized adjustments

## Technical Specs

Supply voltage: 20...250 V AC (47... 63 Hz)  
 No. of wires: 2-wire  
 Maximum load current: 180 mA (40°C) / 90 mA (80 °C)  
 Voltage drop: < 8 V  
 Leakage current: 1.7 mA  
 Connector: 1/2" Micro AC  
 Housing material: PBT  
 Lens material: PMMA  
 Operating temperature: -13...176 °F (-25...80 °C)  
 Protection: IP67

## Top product features!

- PMD "time-of-flight" technology enables long sensing ranges up to 2 meters (6.5 ft) and eliminates need for sensors with reflectors
- Superior optical performance independent of target color
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of target distance
- Reliable background suppression with no false triggers from highly reflective objects such as stainless steel
- M30 diameter, Class 1 and Class 2 laser

## OID with easy-turn setup applies "Time-of-Flight" measurement via PMD Technology

**NEW!** The OID Series photoelectric sensors integrate "Time of Flight" sensing principle with PMD technology to provide reliable sensing in industrial automation applications. The advantages of PMD technology include extremely long sensing ranges, reliable background suppression, visible red light spot for setup and high excess gain. The OID's sensing range can reach up to 2 meters.

The OID Series sensors offer reliable optical performance independent of target color. Whether shiny, matte, dark or light objects, the OID provides superior background suppression.

Models OID200, OID202 and OID250 feature a rotatable ring for quickly setting the switchpoint. Parameters may also be set via the IO-Link LineRecorder Device software. Models OID204 and 254 are designed with a one-piece, completely sealed stainless steel housing. These robust sensors are ideal for harsh environments. The parameters are set using IO-Link.

The OID allows you to select the setpoint in inches and centimeters by turning the rotatable setting ring. A visible red light spot helps to align the sensor. No power is required for simple bench setup.

**Time of flight principle**  
This principle measures a distance based on the time it takes light to travel to an object and back to the receiver.

## Top product features!

- Miniature photoelectric with sensing range that can be set to the nearest millimeter for precise detection of small components
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Selectable light-on and dark-on mode
- Adjustable switch-on and switch-off delays
- Integrated metal frame with mounting thru-holes will not bend or break
- Compact design and 45° cable exit is ideal for applications with limited mounting space

## Miniature photoelectric reliably detects small objects

**NEW!** The O8 Series of photoelectric sensor, while small in size, contains a powerful LED light source that allows it to detect targets up to 80 mm away regardless of their color or surface finish. Whether flat, shiny, matte, dark or light, the O8 offers reliable optical performance independent of target color. Designed with extremely reliable background suppression, it can precisely detect very small targets.

### Setup is easy.

The sensor features a visible red light spot that helps to align it. The sensing distance is set to the nearest millimeter using IO-Link. Two highly visible LEDs indicate switching status and power.

The compact design is well suited for mounting in tight areas. The sensor's integrated robust metal frame with thru-holes will not bend or break during installation.

The O8's price/performance value makes it ideal for assembly automation, packaging, and robotic applications – or wherever very small sensors are required.

## Miniature sensor mounts in tight areas

Whether flat, shiny, matte, dark or light, the O8 offers reliable optical performance independent of target color and is ideal for assembly automation and robotic applications.

## Top product features!

- Miniature housing provides reliable part detection in tight spaces
- Diffuse background suppression model's precise light spot accurately senses small targets and are interference immune
- Visible red light for easy alignment and setup
- Thru-beam, retro-reflective and diffuse background suppression sensors with fixed sensing ranges for quick setup
- Ideal for position detection in part feeding and material handling applications

## Powerful photoelectric in a miniature housing

The O7 Series of photoelectric sensors are specifically designed for small part detection or when there is minimal mounting space for sensors. The sensor's well-defined light spot enables the precise detection of small objects over long distances. Typical applications are part feeding and material handling technologies.

### Fixed sensing ranges enable quick setup

Fixed sensing ranges make the sensors plug-and-play and ready for operation immediately after installation. Visible red light allows fast and simple alignment.

Diffuse sensors with background suppression are available with 30, 50 or 100 mm ranges. Other models include polarized retro-reflective with 1 meter ranges and thru-beam pairs with 1.5 meter ranges.

*The miniature O7 photoelectric sensor is ideal for position detection in part feeding and material handling applications.*

## Top product features!

- Suitable for use in factory automation applications
- Best-in-class optical features
- Precise background suppression sensing independent of target color
- Rectangular plastic housing is industry standard size
- Dual potentiometer design for adjustment and light-on / dark-on selection

## Miniature photoelectrics for industrial automation

ifm introduces a new line of miniature photoelectrics that are designed for a variety of applications in industrial automation.

The O6 Series Photoelectric Sensors feature a simple adjustment potentiometer and a visible red light source that allows the sensor to be set up in the application quickly and easily. The potentiometers are double-sealed and, like the lens, are embedded flush to allow for residue-free cleaning. The transparent black cover ensures that the sensor's two LEDs are highly visible even in bright lighting conditions. The coated lens is made of resistant, shatterproof PMMA plastic.

The O6 sensor line is available in diffuse, diffuse with background suppression, polarized retro-reflective and through-beam pairs.

Easy alignment – Powerful visible red light source with precise spot enables easy alignment and quick setup.

Easy light-on / dark-on adjustment potentiometer

Sensing range potentiometer adjustment

Transparent black cover encases two bright LEDs

Coated lens made of shatter-proof PMMA plastic

ABS plastic housing

The "high performance" O6 Series photoelectric is designed and tested to withstand tough industrial automation applications.

### Technical Specs

Type of light:	Red light 633 nm Infrared light 850 nm
Operating voltage:	10...30 VDC
Current consumption:	20 mA
Switching frequency:	1000 Hz
Switching status indication:	Yellow LED
Operation:	Green LED
Current rating:	100 mA
Voltage drop:	< 2.5 V
Protection rating:	IP65, IP67
Ambient temperature:	14...140 °F (-25...60 °C)
Housing material:	ABS
Lens material:	PMMA

 For M8 and M12 Micro DC connectors, see pages 265, 271.

## Top product features!

- Suitable for use in both factory automation and harsh applications
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Precise background suppression sensing independent of target color
- Robust 316 stainless steel rectangular housing is industry standard size
- Dual potentiometer design for adjustment and light-on / dark-on selection

## Robust photoelectrics for harsh environments

ifm introduces a new line of robust photoelectrics with stainless steel housings that are designed for a variety of industrial automation applications as well as sanitary environments. The O6 Series Photoelectric Sensors provide reliable position sensing in harsh environments.

The sensors feature a simple adjustment potentiometer and a visible red light source that sets up the sensor in an application quickly and easily. The potentiometers are double-sealed and, like the lens, are embedded flush to allow for residue-free cleaning. The transparent black cover ensures that the sensor's two LEDs are highly visible even in bright lighting conditions. The coated lens is made of resistant, shatterproof PMMA plastic.

The O6 sensor line is available in diffuse, diffuse with background suppression, polarized retro-reflective and through-beam pairs.

The sensor can automatically adapt to the changing environmental conditions in a plant such as water and steam.

Small but mighty – The robust O6 photoelectric sensors are designed to perform in the harshest environments.

## Top product features!

- Suitable for use in coolant applications
- Precise background suppression sensing independent of target color
- Robust 316 stainless steel rectangular housing is industry standard size
- Dual potentiometer design for adjustment and light-on / dark-on selection

## Robust photoelectrics for coolant applications

ifm introduces a coolant line of robust photoelectrics with stainless steel housings. The O6 Series Photoelectric Sensors provide reliable position sensing in harsh environments. Thanks to a specific material used in the construction of the sensors, they are extremely durable in applications where coolants are used.

The sensors feature a simple adjustment potentiometer and a visible red light source that sets up the sensor in an application quickly and easily. The potentiometers are double-sealed and, like the lens, are embedded flush to allow for residue-free cleaning. The transparent black cover ensures that the sensor's two LEDs are highly visible even in bright lighting conditions. The coated lens is made of resistant, shatterproof PMMA plastic.

The O6 sensor line is available in diffuse, diffuse with background suppression, polarized retro-reflective and through-beam pairs.

*Small but mighty – The robust O6 photoelectric sensors are designed to perform in coolant applications.*

## Application solutions

*These products offer an ideal combination of features, performance and value for all industrial automation and metal-working applications!*

## Top product features!

- Small package, long range! Compact design is ideal for applications with limited mounting space
- Advanced microprocessor provides powerful signal processing and enables automatic adjustments to maximize safety margin
- Ideal for sensing small components and features 500  $\mu$ s response time for high-speed applications
- Sensor continuously monitors the strength of received signals and provides a visual LED alert under marginal operating conditions
- Programmable light-on / dark-on for application flexibility

## Compact size and automatic setup

OJ photoelectric sensors use visible LEDs as the light source and measure only 24 x 45 x 11 mm. With switching speeds up to 2000 Hz, the sensors are fast enough to be used in most high-speed applications. A wide variety of mounting brackets allow the OJ to be adapted to most mounting configurations.

An advanced microprocessor provides powerful signal processing and analysis capabilities. This enables the OJ to learn the characteristics of both the target and the background in a specific application.

During initial installation, the automatic calibration will determine the light conditions of both the target-present and target-not-present conditions. The sensitivity of the OJ will then be automatically adjusted so there is a maximum safety margin under each condition.

## Diode array sensing technology

The OJ incorporates diode array technology that enables the sensor to differentiate between the target and the background.

The sensing element contains 63 diode receivers that are placed on an integrated circuit. The array is extremely small allowing it to fit inside the OJ's miniature housing.

## Top product features!

- Bright red Class 1 laser light source provides visual indication of beam alignment
- Small package, long range! Compact design is ideal for applications with limited mounting space
- Advanced microprocessor provides powerful signal processing and enables automatic adjustments to maximize safety margin in an application
- Sensor continuously monitors the strength of the received signal and provides a visual LED alert under marginal operating conditions
- Programmable light-on / dark-on for application flexibility

## Differentiates target from background at less than 0.5 mm

High resolution background suppression laser sensors are ideal for precise sensing applications. The sensor can differentiate between the target and the background at less than 0.5 mm. This type of accuracy is critical for assembly automation applications such as part present and inspection. The OJ's collimated laser beam provides the same beam width up to a distance of 200 mm.

An advanced microprocessor provides powerful signal processing and analysis capabilities. This enables the OJ to learn the characteristics of both the target and the background in a specific application.

During initial installation, the automatic calibration will determine the light conditions of both the target-present and target-not-present conditions. The sensitivity of the OJ will then be automatically adjusted so there is a maximum safety margin under each condition.

For application versatility, OJ sensors are available in two lens configurations, side sensing and front sensing.

## Diode array sensing technology

## Top product features!

- Visible red light technology provides precise alignment and simplifies adjustment
- Extremely long sensing ranges – up to 1.8 meters for background suppression models; 10 meters for polarized models
- Innovative two-pushbutton 'Teach mode' simplifies setup
- Protective metal frame withstands mechanical damage in industrial automation applications
- Durable rotating connector rotates 270° and easy-to-use bracket system reduces inventory for cordsets

## Rugged design and versatile mounting

ifm's O5 photoelectric sensors offer extremely long sensing ranges in a small housing. The sensors offer a simple two pushbutton 'Teach Mode' that provides high accuracy and extreme resolution for precise applications.

Installation is easy. The sensor's connector rotates 270° for alignment in multiple directions. A variety of brackets are available for versatile mounting.

The O5 sensor can be mounted above its target – up to 1.8 meters for background suppression models.

With its combination of sensing range, compact housing and simple setup, the O5 sensor family is a price / performance benchmark.

Actual size

## Innovative 'Teach Mode' operation

### Step 1: OUT-off

Mount and align the sensor in the application. The sensor's visible red light simplifies adjustment. Press the OUT-off (output off) button for two seconds.

### Step 2: OUT-on

Position the object to be detected. Press the OUT-on (output on) button. The sensor is now ready for operation.

## Top product features!

- PMD "time-of-flight" technology enables long sensing ranges up to 2 meters (6.5 ft) and eliminates need for sensors with reflectors
- Superior optical performance independent of target color
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- 📡 Digital transmission of target distance
- Reliable background suppression with no false triggers from highly reflective objects such as stainless steel
- Class 1 and Class 2 laser can be mounted to any surface and rotated in any position for application versatility

## O5D with simple setup applies "Time-of-Flight" measurement via PMD Technology

**NEW!** The O5D Series photoelectric sensors integrate "Time of Flight" sensing principle with PMD technology to provide reliable sensing in industrial automation applications. The advantages of PMD technology include extremely long sensing ranges, reliable background suppression, visible red light spot for setup and high excess gain. The O5D's sensing range can reach up to 2 meters.

The switchpoint can be set easily by using the sensor's display with plus / minus (+/-) buttons that set the switchpoint. A visible red light spot helps to align the sensor and a numeric display shows the distance set. A model is available to display in inches. The switchpoint on the O5D may also be set via IO-Link.

The O5D Series sensors offer reliable optical performance independent of target color. Whether shiny, matte, dark or light objects, the O5D provides superior background suppression.

**Time of flight principle**  
This principle measures a distance based on the time it takes light to travel to an object and back to the receiver.

Typical photoelectric sensors have challenges with false reflections from shiny targets such as stretch wrap on a pallet. The PMD "time-of-flight" technology from ifm performs reliably in these applications.

## Top product features!

- Photoelectric with long sensing ranges that reach up to 80 meters
- Visible red light technology provides precise alignment and simplifies adjustment
- Innovative two-pushbutton 'teach mode' simplifies setup procedure
- Built-in stainless steel frame protects housing in harsh environments
- Durable rotating connector rotates 270° and easy-to-use bracket system reduces inventory for mounting accessories

## O4 Photoelectrics with 80 meter sensing ranges

Compact O4 Series photoelectric sensors offer extremely long sensing ranges that are ideal for applications including transporting, conveying, inspection and error-proofing. The sensor's extended sensing range enables the sensor to be placed farther away from an application reducing its chance of physical damage. A built-in, stainless steel frame provides additional protection for the sensor.

Flexible mounting with visible red light for alignment

- Visible red light technology simplifies set-up and provides quick mounting.
- The durable connector rotates 270° for alignment in multiple directions. A variety of easy-to-use brackets are available for versatile mounting options.

## Innovative 'Teach Mode' operation

**Step 1: OUT-off**  
Mount and align the sensor in the application. The sensor's visible red light simplifies adjustment. Press the OUT-off (output off) button for two seconds.

**Step 2: OUT-on**  
Position the object to be detected. Press the OUT-on (output on) button. The sensor is now ready for operation.

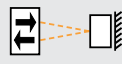

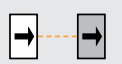

### PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

## Top product features!

- Fork and angle sensors with one-piece housing design saves set-up time
- Accurate alignment – no need to align transmitter and receiver
- Robust, metal housing with thru-holes for easy mounting without brackets
- Laser sensors are ideal for detecting very small parts
- Light-on / dark-on mode selectable via rotary switch for application flexibility

## Optical fork and angle sensors offer easy setup and accurate alignment in robust metal housing

ifm's optical fork and angle sensors offer a flexible solution for a broad range of packaging and material handling applications. Unlike traditional thru-beam photoelectric sensor pairs, ifm's fork and angle sensors offer a one-piece, fixed-distance transmitter and receiver design. This design eliminates the time consuming alignment of a transmitter and a receiver.

The sensor's robust metal housing resists distortion that typically occurs with conventional plastic fork sensors. A visible red light beam across the whole width assists in setup. Easy adjustable sensitivity setting is established via a potentiometer. Integrated thru-holes provide simple mounting without brackets.

Fork housings are available with slot widths ranging from 10 mm up to 120 mm. Angle sensors are available in 60 mm and 100 mm widths.

## Top product features!

- Multi-channel fiber optic controller with central operating display is designed for applications with multiple sensing points
- Features LCD operator interface that can be used to program multiple fibers and perform AND / OR logic functions
- Available in 2-fiber, 4-fiber, 6-fiber and 8-fiber models
- Individual fibers can be programmed for up to two switchpoints each
- Controller eliminates excessive wiring by using a single cable that replaces individual wiring for each amplifier

## Fiber optic controllers and amplifiers

Fiber optics can be used in applications with limited mounting space or as an alternative to a standard photoelectric sensor. Because the electronics are contained in a separate housing that can be remotely located, only the miniature fiber must be mounted near the target.

### Multi-Channel Fiber Optic Controller reduces wiring

ifm's multi-channel fiber optic controller is designed for applications that require multiple fiber-optic sensing points. The controller eliminates excessive wiring by using a single cable that replaces individual wiring for each amplifier. Depending on the model, up to eight fibers can be connected to one fiber optic controller.

## Top product features!

- Fiber optic amplifiers for plastic or glass fibers
- Single-fiber amplifiers incorporate transmitter and receiver in one housing
- Automatic pushbutton setup adjustment for quick application setup
- Auto detect circuit for PNP or NPN output
- Provides multiple bright LEDs for signal strength indication

## Fiber optic amplifiers

OBF amplifiers can be mounted in areas with limited mounting space

Fiber optics can be used in applications with limited mounting space or as an alternative to standard photo-electric sensors. Because the electronics are contained in a separate housing that can be remotely located, only the miniature fiber must be mounted near the target.

### OBF amplifiers

The OBF amplifiers incorporate a transmitter and receiver in one housing. A single fiber optic cable is connected to the amplifier and directs light to and from the transmitter and receiver. Fiber optic cables are available in two versions: thru-beam and diffuse reflection.

### Typical applications:

**Confined spaces:** The fiber optic head can be positioned at the sensing location, while the amplifier can be mounted remotely where sufficient space is available. Fiber cables are typically 2-6 feet long to accommodate the distance.

**Detection of minute objects:** Depending on the sensing head and range, objects as small as 0.5mm can be detected. When the placement of the target is precise, it is possible to detect fine structures such as thread pitches.

**High temperatures:** Stainless steel glass fiber optic cables can withstand temperatures up to 600°F

### Powerful amplifier in a compact housing

## Top product features!

- Right balance of performance, size and price for distance measurement applications
- Photoelectric is ideal for long-range background suppression applications
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- ⚙️ Digital transmission of target distance and reflectivity
- Large 4-digit alphanumeric display indicates measured distance
- Ignores ambient light up to 100 klx

## Reliable solution for long-range object detection

The harsh effects of manufacturing conditions such as weld slag and chemicals often prevent optical sensors from being used in error-proofing applications. The *efector pmd* laser sensor with background suppression can be placed farther away from the application – and the elements – to accurately locate a small part.

### efector *pmd* advantage

Background suppression and ultrasonic sensors are lower-cost alternatives for distance measurement but have shorter ranges. Traditional time-of-flight systems offer an improved level of performance but are much higher in cost. ifm's *pmd* sensor combines the advantages of these systems: a 10 meter range at an affordable price.

### New feature

The ifm *pmd* sensor can now ignore ambient light up to 100 klx. This makes it a perfect sensor for both indoor and outdoor applications.

### 4-digit numeric display

The sensor's 4-digit alphanumeric display precisely indicates the measured distance. Models available with simple teach function or parameter setup via pushbutton.

## Top product features!

- Contrast and color sensors for error-proofing and object detection
- Sensor uses reliable RGB (red, green, blue) technology to determine ideal color to differentiate target background
- High color contrast sensitivity and resolution
- 18 to 22 mm sensing range for contrast, 15 to 18 mm for color
- Auto-detect for PNP/NPN configuration and "Teach Mode" setup to establish application parameters

## O5 contrast and color photoelectric sensors

ifm's high performance O5 Series Contrast and Color sensors offer a variety of sensing solutions for the packaging, assembly, material handling and printing industries.

The O5 sensors feature a RGB visible light transmission LED that processes through red, green and blue to identify the best contrast color between the target and the background.

### Contrast sensor application solutions

The Contrast Sensor's visible light processes through red, green and blue to identify the best color for contrast.

In this example, the sensor selects blue for the highest contrast color. The sensor's high switching frequency can handle the application's short mark-to-space ratio.

### Color sensor application solutions

**Color verification:** Using the O5's adjustable tolerance, the O5 can accept variations of the same color and reject different colors.

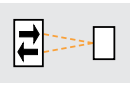

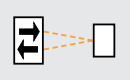

**Orientation:** The O5 detects proper orientation in fast-moving applications.

## Top product features!

- Detects glass, film, PET bottles and transparent objects
- Simple automatic sensitivity adjustment for reliable detection of clear objects
- Programmable LO / DO for application flexibility
- Thru-hole mounting for an easy, fixed mounting solution
- Multiple bracket options for mounting flexibility

## Reliable clear object detection

OJ sensor uses a reflector to detect plastic bottles on a conveyor.

One of the most difficult photoelectric applications is the detection of clear objects such as film, glass, or PET plastic bottles and transparent packaging. Standard sensors typically have too much excess gain and “burn” through the clear material. ifm efector offers two options for clear object detection applications: the OJ Series sensors and the O5 Series sensor.

### OJ Series sensors – compact housings, long sensing ranges

ifm’s OJ Series retroreflective sensor offers a low switching hysteresis specifically for the detection of transparent objects. The sensors incorporate an innovative technology that allows the sensitivity to be automatically set using an easy-to-use teach function. The teach function eliminates the need to have the product present during initial

set up. The technology also reduces the effect of “dead spots” or areas on plastic bottles that cannot be detected when teaching the sensor to read a clear bottle as the target.

### O5 Series sensors - sensing range up to 3 meters

ifm’s compact O5 Series polarized retro-reflective sensor offers extremely long sensing ranges – up to 3 meters when used with ifm’s prismatic square reflector (Part No. E20454). The high-precision sensor is designed for inspection and error-proofing applications and offers high switching frequency of 2000 Hz for fast moving processes. The unit features a two-pushbutton Teach operation that quickly establishes light-on/dark-on programming. The sensor’s micro-processor provides automatic calibration, load detection (PNP or NPN), and switch point adjustment with soiling indication.

O5 Series sensing range reaches up to 3 meters using a prismatic reflector.

OJ sensors feature front sensing and side sensing models.

## Top product features!

- Ultrasonic sensors with robust high-grade stainless steel housing for demanding applications
- Sensing range up to 1.2 m in M18 cube design and 2.2 m in M18 tubular design
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of target distance and sensor health diagnostics
- Digital and analog outputs for object detection and level applications

## Compact ultrasonic sensors with robust metal housings – Object detection for long ranges and challenging surfaces

**NEW!** Ultrasonic sensors emit short bursts of very high frequency sound waves. When the sound waves strike an object, an echo is reflected back to the ultrasonic sensor. The time it takes for the sound to travel to the object and back is measured and converted into a distance. This information may be used for both position and level sensing applications.

### Ability to solve challenging applications

Ultrasonic sensors are similar to photoelectric sensors in their ability to detect targets at long ranges. Since they operate by sensing sound, ultrasonic sensors are not subject to interference from light sources such as UV or direct sunlight. Ultrasonic sensors are capable of sensing irregular-shaped targets including objects with holes. They are particularly well suited for sensing sound-reflecting targets regardless of their color, transparency or surface reflectivity.

### The solution for a wide variety of position applications

- Ideal for sensing clear objects and diffuse sensing of targets at long ranges (up to 2.2 meters), such as automobile windshields.
- Detects full or empty positions in stack height control applications.
- Senses position of the material loop so the roller speed can be adjusted as required for non-contact web loop control.
- Detection of roll diameters to determine when the material will run out; or for stamping applications where shiny metal surfaces can be challenging to detect with photoelectric sensors.
- Well suited for level applications with liquids and materials with uneven surfaces such as granules and powders.
- Retro-reflective models detect objects regardless of orientation.
- Good solution for dusty environments because vibrating sound transducer reduces the accumulation of deposits.

### Application solutions

ifm's ultrasonic sensors detect targets regardless of their color, transparency or surface reflectivity.

## Top product features!

- Encoders with programmable resolution from 2 to 10,000 and selectable HTL / TTL output
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Functions as an encoder, counter or speed/direction monitor
- Dual color digital display for at-a-glance monitoring
- Solid or hollow shaft designs of varying diameters and flange options
- Industry standard M12 connectors

## Intelligent incremental encoder with digital display and IO-Link

**NEW!** Incremental encoders provide accurate feedback of the position of rotating shafts on machinery. ifm now introduces a versatile line of intelligent encoders that can perform in three capacities: as an encoder, counter or speed / direction monitor. Evaluating pulses in the encoder reduces the burden on your controller. These encoders incorporate features that are ideal for applications found in the material handling, packaging, automotive, wood and print / paper industries.

### Easy setup via pushbuttons or IO-Link

A simple pushbutton menu allows the encoder resolution to be programmed from 2 to 10,000 and the output is selectable for either HTL or TTL. Parameters may also be set via ifm's LineRecorder Device software or IO-Link. There's no need to stock multiple encoders!

### Two color digital display for easy monitoring and troubleshooting

These intelligent encoders are designed with a two color (red / green) integrated digital display for indicating if process values are in an acceptable range or if limits have been exceeded. The display values can also be electronically rotated 180° increasing installation flexibility.

### Reliable performance in various options

ifm's incremental encoders operate using magnetic technology and provide the accuracy of traditional optical encoders with the robustness of magnetic encoders. They withstand shock and vibration, offer high switching frequencies and are available with a 6 mm or 10 mm diameter solid shaft or 12 mm diameter hollow shaft. These encoders have a rotatable industry standard M12 connector that may be positioned radially or axially.

ifm's intelligent encoders feature a dual color (red / green) digital display for indicating if process values are in an acceptable range or if limits have been exceeded.

Program setpoints via intuitive menu or via IO-Link.

ifm's intelligent encoders include a 32-bit microprocessor. With a resolution of 16-bits, a precision <math>< 0.1\%</math> (12 bits) can be reached. Signal transmission is fast!

## Top product features!

- 18 and 30 mm diameter speed monitors detect under-speed and over-speed conditions
- For rotational speed applications
- 18 mm quick disconnect offers 3-LED status display
- 30 mm units feature easy-to-adjust sensor setpoint
- Time delay eliminates nuisance trips

## Evaluation system for self-contained speed applications

The compact speed monitor is an evaluation system for monitoring rotational speed, particularly over- or under-speed conditions. The sensor and evaluation electronics are integrated into a compact 18 and 30 mm diameter metal housing. The 3-wire version includes a "target-present" LED to simplify set up. The unit senses the speed of the rotating target and provides a digital output when the speed exceeds a customer-programmed set point.

Positioned to sense a bolt head, cam, or other target on a rotating shaft, the DI series speed monitor generates an internal pulse each time the target passes. Counting the pulse train determines if the shaft speed is above or below the set point.

Speed monitors can be used to detect under-speed conditions on spindle applications.

## Top product features!

- Monitoring of two limit values with separate output relays
- High input frequency of up to 60,000 pulses / minute
- Configurable functions, speed-proportional analog output
- Clearly readable, luminous OLED display
- Extended operating temperature range down to -40 °F

## Versatile rotational speed monitoring and standstill detection

**NEW!** The speed monitors calculate the rotational speed by evaluating pulses. The transistor and relay outputs switch when adjustable limit values are exceeded or not reached. This allows, for example, reliable overspeed and standstill detection.

The DD2503 monitors the rotational speed of one channel with two separately adjustable limit values. A separate output is assigned to each limit value. The DD2505 monitors two separate input channels, each having one switchpoint.

### Overspeed monitoring

Centrifuges, carousels or wind turbines are monitored for exceeded maximum rotational speed. The speed monitor gives a switch-off signal as soon as the speed is too high. This makes sure that the resulting centrifugal forces will not destroy the system.

### Standstill monitoring

Standstill monitoring is used to detect torn conveyor belts, to monitor the V-belts of ventilators or to detect blocked screw conveyors. The speed monitor signals a dysfunction in case of unexpected standstills of the non-driven side of the machine.

### Configurable output functions

The relay outputs are switched on or off in case the limit values are exceeded or not reached. They may also remain switched until they are manually reset. Optionally, the reset can take place automatically after an adjustable period of time.

The transistor outputs that can be used alternatively are switched to the relays simultaneously. These can, for example, be connected directly to a plc in order to transmit status messages.

Speed monitors switch when critical rotational speeds are exceeded or not reached.

## efector dualis Contour Sensor provides 100% inspection testing

ifm efector's inspection sensor, efector dualis, monitors a variety of error-proofing applications to provide 100% inspection testing throughout the assembly automation process.

Objects in fast-moving processes are reliably detected and evaluated – regardless of orientation – with the sensor's miniature CMOS-based image processor. High-performance software enables the sensor to find objects with extreme accuracy and speed. The sensor detects and compares defined shapes and provides up to five configurable outputs.

- 100% inspection testing throughout the assembly automation process
- All-in-one design includes an image sensor, evaluation electronics and integrated infrared LED lighting
- Powerful intelligence and 640 x 480 resolution are driven by a smart algorithm
- Compact, industrial-compatible housing measures only 42 x 80 x 53 mm
- An LED display indicates operating status
- Prices start under \$1000.00

## efector dualis Inspection Sensor application examples

### Identify missing piece in O-ring assembly

Complete O-ring

Incomplete O-ring

**Description:** In this application, identifying that a piece is missing in an O-ring is imperative. Contour Sensor is programmed to verify that the O-ring is complete and that no piece is missing regardless of the size and location of the missing piece.

**Industry:** Assembly automation

The Contour Sensor is the appropriate choice for this application because the missing piece can vary in location and size.

### Application solutions:

- Right part / wrong part
- Correct orientation
- Missing component
- Object character verification
- Counting
- Sorting
- Logic functions
- Pass / fail

### Verify the correct position of a punch-out on a steel rod

Correct part

Incorrect part

**Description:** Verifying the correct punch-out position is imperative to the process. If left undetected, an improper crimp or punch-out position on a steel rod would lead to scrap metal.

**Industry:** Stamping

The Contour Sensor detects the outer edges of the rod and uses it as a reference point for the circular punch-out providing reliable results.

Company	IO-Link	Position Sensors		Cylinder / valve position	Photoelectrics / lasers / fiber optics	Distance / Application specific	Ultrasonic	Motion Control	Vision Sensors

1 - 5	6 - 21	22 - 55	56 - 61	62 - 71	72 - 111	112 - 117	118 - 119	120 - 127	128 - 143

## efector dualis Pixel Counter monitors error-proofing applications

ifm's O2V Series efector dualis Pixel Counter sensor solves a variety of inspection and error-proofing applications throughout the manufacturing process. The compact CMOS vision sensor provides reliable performance in production control.

The Pixel Counter analyzes the area of an object by counting the pixels and can identify objects that vary in shape, size or shade. ifm's Pixel Counter features a robust die cast metal housing that is able to withstand the abuse typically found in industrial environments.

- Integrated lighting, evaluation electronics, and image sensor
- On-board lighting element provides correct amount of image brightness
- Powerful algorithm and fast image capture
- Pushbutton setup and 4-digit numeric display
- Easily accessible focus tool quickly defines images
- Easy-to-follow Setup Wizard guides user for quick setup
- Supports Allen-Bradley's Ethernet IP and standard Ethernet TCP products

## efector dualis Inspection Sensor application examples

### Verify the presence of threads

Correct part

Incorrect part

**Description:** *Missing threads in metal parts can cause oil leaks and ultimately engine failure.*

**Industry:** *Metal casting*

*The Pixel Counter detects the inconsistencies on the threaded surface so that faulty parts can be eliminated prior to assembly.*

### Application solutions:

- Part verification
- Orientation
- Sortation
- Part / no part
- Pattern matching
- Shape detection
- Object counting and contrast
- Inner/outer radius
- Measurement

### Verify the correct amount of glue for bonding on a joint

Glue present

Glue missing

**Description:** *In wood assembly, the right amount of glue must be applied to a joint. Too much glue causes bleeding out of the joint and too little causes improper bonding.*

**Industry:** *Wood*

*The Pixel Counter is able to count the amount of white pixels (produced by the glue) to determine the amount of glue on the joint.*

## Multi-Code Reader identifies data matrix and 1D codes

Data matrix codes are critical for tracking parts and insuring reliable quality in the manufacturing process. ifm has designed a high-performance, easy-to-use Multi-Code Reader in a compact metal housing for rugged industrial automation applications.

ifm's Multi-Code Reader is designed to read 2D data matrix codes and 1D bar codes in industrial automation applications. The versatile Multi-Code Reader can identify, verify and qualify most marking methods.

- Easy-to-use reader in a compact, metal housing
- Reads 2D Data Matrix Codes including ECC200, PDF-417 and QR
- Reads 26 different styles of printed 1D barcodes
- Fast code reading and data transfer
- Integrated lighting eliminates need for external lighting
- Identifies most marking methods including dot-peened, laser-etched and printed DMC codes and barcodes
- Priced 50% lower than current technologies

## Multi-Code Reader application examples

### Dot-peened codes on highly reflective metal parts

**Challenge:** Dot-peened codes on highly reflective metal parts can be difficult to read due to reflections and code placement.

**Solution:** The camera's internal filters can adjust lighting to increase contrast, and its "Smart Algorithm" reads a code in any orientation at angles up to 45°.

### Application solutions:

- Laser etched code on glass
- Printed code on plastic parts
- Dot-peened code on metal parts
- Laser etched code on solar panels

### Laser-etched code on glass and solar panels

**Challenge:** Laser-etched code on PVT panels and glass can be difficult to read due to low contrast.

**Solution:** ifm's Multi-Code Reader features integrated lighting, a CMOS image sensor and digital signal processor to identify and read low-contrast codes.

## O3D Smart Sensor adds an extra dimension to machines

The O3D Smart Sensor is a unique industrial 3D imaging solution that enables automated machines to perceive their environment in 3D with human-like vision.

The O3D Smart Sensor utilizes PMD Time of Flight Imager to quickly and accurately measure the distance of 23,232 points within the field of view.

These points of data are then used to simplify complex applications such as case completeness and dimensioning.

- Includes four pre-built applications on board
- Outputs data to a plc via Ethernet or 24v signal
- Robust and reliable; unaffected by changes in lighting conditions in applications and is color independent
- Quick and easy setup with ifm's Vision Assistant software, available free of cost
- Sets a price/performance benchmark!

### O3D sensor technology

#### The field of view – determine the minimum object size

The distance to target determines both the field of view and the minimum target size. As the distance between the sensor and object increases so does the size of each pixel. The pixel size will determine the minimum size of the object that can be evaluated.

For best results, ifm recommends that the minimum object size is at least 2 x times the size of an individual pixel.

For example:

- at 0.5 meter the pixel size is 2.4 x 2.4 mm
- at 1 meter the pixel size is 5.6 x 5.6 mm
- at 2 meters the pixel size is 11.3 x 11.3 mm
- at 5 meters the pixel size is 28.3 x 28.3 mm

#### The O3D Smart Sensor is ideal for:

- Level Detection
- Case Completeness
- De-Palletizing
- Box Dimensioning

## NEW! Level Detection - accurate, multi-point

The O3D's wide field-of-view and over 23,000 points of measurement provide accuracy over the entire area.

### Challenge

Single point level measurement of bulk materials can be difficult due to the peaks and valleys associated with these materials.

### Solution

The ifm O3D Smart Sensor utilizes 23,000 distance measurements in the Field of View to accurately determine the level of bulk material in hoppers and bins.

### Features

- Analog, digital and Ethernet output available
- Easy setup (usually under 2 minutes)
- Color independent
- Lighting independent
- Stainless Steel housings available

## Case Completeness – a sensor as flexible as your machine

Up to 32 different case sizes can be stored in the O3D. Because the sensor is not impacted by color and can digitally change between recipes, it is the perfect fit for today's flexible packaging lines.

### Challenge

100% inspection for a correct "pack" is difficult. The machines are flexible enough to handle a variety of package sizes, quantities and colors but the sensing technology has not been... until now!

### Solution

The O3D Smart Sensor ignores color and size, and is easily configured for different case sizes. The result is a flexible sensing solution for flexible machines.

### Features

- Color independent
- Lighting independent
- Quick setup (usually under two minutes)
- Easily configured for multiple case sizes
- Digital switching between recipes
- Digital and Ethernet (EIP outputs) available
- Up to 32 different case sizes can be stored on the sensor
- Stainless Steel housings available

Company	IO-Link	Position Sensors		Cylinder / valve position	Photoelectrics / lasers / fiber optics	Distance / Application specific	Ultrasonic	Motion Control	Vision Sensors
	IO-Link	Inductive	Capacitive					Encoders / Speed monitors	2D / 3D inspection

## NEW! De-Palletizing – increase throughput by decreasing cycle time

The next box is located during the previous cycle, to eliminate dwell time.

### Challenge

Localizing individual boxes for robotic de-palletizing can be slow. Limiting overall throughput.

### Solution

The O3D Smart Sensor determines the next box to pick while the robot is dropping the previous case, eliminating the need to stop before each pick.

### Features

- Provides the center of mass coordinates to the robot
- Can be calibrated into the robot coordinate system
- Color independent
- Lighting independent
- Industrial Ethernet Output (EIP, ProfiNet and TCP/IP)
- Stainless Steel housings available

## Box Dimensioning - a new price / performance benchmark

The box dimensioning application provides length, width, height, rotation and location data. A sortation application is also available.

### Challenge

Dimensioning systems for cases / boxes make mixed case palletizing more efficient and help distribution centers better utilize storage space. Price points, however, limit their usage.

### Solution

The ifm O3D Smart Sensor is configured in less than 5 minutes, accurate to under 1/2" on all dimensions, applicable for all areas of the plant.

### Features

- Provides length, width, height, rotation and location data
- Color independent
- Lighting independent
- Quick setup (usually under two minutes)
- Both dimensioning and sortation applications available
- Digital and Ethernet (EIP) outputs available

- Easy-to-use Setup Wizard guides you step-by-step for simple installation
- Flexible connections with Ethernet interface
- Self-contained unit (internal lighting)

## The inspection sensor for error-proofing applications

efector dualis provides reliable performance in production control. Fast processes or moving objects can be detected and precisely evaluated with the sensor's fast image capture and evaluation.

The sensor is an ideal solution for inspection and error-proofing applications such as right part / wrong part, correct orientation, missing component and object character verification.

### Additional application examples

correct orientation

incorrect orientation

### Feeding technology

Feeder bowls are commonly used to constantly supply an assembly line with small parts. These parts, however, must be in the proper orientation to allow correct assembly.

efector dualis can identify incorrect orientation of parts in a feeder bowl before they are applied.

test passed

test failed

### Object character verification

Even the smallest error, such as a missing date on a milk bottle, can cause large problems in a production line. The efector dualis is ideal for object character verification in a moving production line.

In this example, efector dualis detects a series of preset characters that indicate expiration date. In the following picture, efector dualis detects the missing characters and sends an alarm.

### Built-in intelligence

*Independent evaluation: efector dualis includes an image sensor, evaluation electronics and lighting integrated in one robust, industrial compatible housing.*

## Top product features!

- Ideal for inspection and error-proofing applications with irregularly shaped objects
- Reliable inspection testing throughout the production process
- CMOS image element and powerful digital signal processor
- Robust housing for use in industrial environments
- Easy application Setup Wizard offers step-by-step instruction with advanced functionality

### efector dualis Pixel Counter

ifm's O2V Series efector dualis Pixel Counter sensor solves a variety of inspection and error-proofing applications throughout the manufacturing process. The compact CMOS vision sensor provides reliable performance in production control. The Pixel Counter analyzes the area of an object by counting the pixels and can identify objects that vary in shape, size or shade.

The O2V Series Pixel Counter includes an image sensor, evaluation electronics and integrated lighting in a die-cast metal housing that withstands harsh industrial

environments. Objects are reliably detected and precisely evaluated with the sensor's fast image capture and powerful algorithms. The sensor's push-button setup and 4-digit numeric display indicates the sensor's output.

An on-board lighting element illuminates the object and provides the correct amount of image brightness at various ranges. An easily accessible focus tool quickly defines images. The sensor features an easy-to-follow Setup Wizard that guides the user for quick setup and supports Allen-Bradley's Ethernet IP and standard Ethernet TCP products.

### Additional application examples

Black seat frame

The goal is to separate a black seat frame from a silver seat frame. A standard contrast sensor would solve this application, but typically lacks the sensing range required to detect the seat frame.

Silver seat frame

The Pixel Counter can be used for simple contrast applications when extra distance is needed and can easily detect the silver seat frame in this application.

Correct molding

A piece of metal is inserted in a rubber mold, and it is imperative that the area is covered smoothly. In this case, while in the molding process, an inconsistent shape formed around the insert.

Incorrect molding

The molding process can leave an inconsistent shape around the insert. The Pixel Counter inspects for a low level of bright pixels, detecting an incorrect molding.

## Top product features!

- Robust design and compact metal housing provide long life and reliability in industrial environments
- CMOS image sensor and digital signal processor with no moving parts for durability
- Reliably reads dot-peened, laser-etched and printed data matrix codes as well as printed bar codes
- Configurable four-quadrant lighting improves readability, reduces glare and the need for external lighting
- Easy application Setup Wizard guides you step-by-step with advanced functionality for demanding applications

## Reliable identification of data matrix and 1D codes

The ifm Multi-Code Reader is designed to read 2D data matrix codes and 1D bar codes in high speed industrial automation applications.

The versatile Multi-Code Reader can identify, verify and qualify most marking methods including dot-peened, laser-etched and printed data matrix codes as well as printed barcodes.

The Multi-Code Reader features a maximum speed of 7 meters/second. The unit reads three types of 2D codes: ECC200, PDF-417 and QR as well as 26 styles of printed barcodes.

## A better alternative from ifm

Features	ifm
Robust housing	✓
Reads both 2D and 1D codes	✓

Reads all marking methods	✓
Orientation independent	✓
Configurable quadrant lighting	✓
7 meters/second line speed	✓
Easy Setup Wizard	✓
Switching output for I/O	✓
Ethernet TCP/IP	✓
Price – 50% lower than current technologies	<b>\$936</b>

### Challenge (1D Barcode)

Traditional barcode readers can only read the 1D code in horizontal or vertical positions.

### ifm Solution (1D Barcode)

ifm's camera based Multicode Readers can read 1D barcodes in multiple orientations.

## Top product features!

- Uniform and shadow-free illumination of the object
- Permanent or pulsed light operation with optional high intensity light
- White light, red light and infrared versions
- Compact design and robust housing
- Diffuser accessory available for “cloudy day” illumination to balance light source

**NEW!** ifm’s vision sensors include an on-board lighting element that illuminates the object and provides the correct amount of image brightness at various ranges.

Some applications, however, may require additional lighting. For example, detecting specific surface characteristics, such as a dot-peened code, scratches or nicks may require high intensity light. In contour sensing, sometimes there is not enough contrast between the object and the background. Additional backlighting may help emphasize the target against the background.

ifm’s high-quality LED illumination units provide uniform lighting to solve a large

variety of applications. Models are available with white, red and infrared light in spot light, back light, ring light, bar illumination and dark field illumination units.

An assortment of mounting kits are provided and make installation quick and easy.

## Top product features!

- Robust industrial O3D Smart Sensor – Application Assistant adds 3rd dimension to machines
- Includes two on-board applications: case completeness and box dimensioning
- Objective lens housing protected behind Corning Gorilla glass defines large field of view
- 4 IR LEDs illuminate large field of view over the 0.3 to 5 meter range protected behind Corning Gorilla glass
- M12 Ethernet connection for parameterization and communication output data via industrial Ethernet networks (TCP/IP & ProfiNet)

**NEW!** Today's manufacturing and logistics environments are becoming more and more automated to meet customer demand. The tools being used, whether it be robots or machines, have to become faster and more flexible to maintain throughput. This requires them to "see" more. 2D is not enough. They must be able to perceive their environment the same as we do... in 3D. ifm's revolutionary O3D Smart Sensor for industrial automation enables automated machines to perceive their environment in 3D with human-like vision.

### Innovative pmd imager

ifm's patented pmd time-of-flight imager provides 176 x 132 pixel array to quickly and accurately measure the distance of 23,232 points within its field of view. The

distance to each pixel is calculated by comparing the phase shift of send and returned infrared light. Every measurement is collected simultaneously and made immediately available as a fully calibrated 3D point cloud, which can be sent to a PC or controller via Ethernet.

The technology also features a patented suppression of background illumination technology making it immune to changing lighting conditions in the application environment.

### Application Assistant adds third dimension!

The O3D Smart Sensor - your Application Assistant - adds a third dimension of sight to packaging and material handling machines. The Smart Sensor has four pre-built applications on board: case completeness, box dimensioning, palletizing / de-palletizing and level. The opportunities are endless.

An outstanding price/performance value, ifm's O3D Sensor can be applied in most areas throughout the plant!

### Technical Specs

Maximum load current:	100 mA
Current consumption:	< 2400 peak current pulsed; typ. mean value 420; max. mean value 1600 mA
Image repetition rate:	≤ 25 Hz
Lighting:	infrared LED 850 nm; invisible radiation of light-emitting diodes
Operating voltage:	20.4... 28.8 DC; to EN 61131-2
Operating temperature:	14... 122 °F (-10... 50 °C)
Protection rating:	O3D300 and O3D302 IP65, IP67, O3D310 and O3D312 IP65, IP67 and IP69K
Material:	Lens window: corning gorilla glass Housing: O3D300 and O3D302 diecast aluminum O3D310 and O3D312 stainless steel
Parameter setting / process interface:	Ethernet TCP, Ethernet IP: 10BaseT / 100Base-TX

## Top product features!

- Fail-safe inductive sensors do not require a special key or coded magnet for a target, reducing installation time and alignment issues
- High tolerance to misalignment and nuisance tripping
- Multi-function safety relay compatible with industry-standard safety devices
- Self-monitoring circuit verifies that the sensor is functioning correctly
- Rated up to SIL 2 or SIL 3 according to IEC 61508

## Non-contact, fail-safe inductive sensors for safety applications

ifm's non-contact fail-safe sensors incorporate inductive technology that detects standard metal target material such as stainless or mild steel. Coded magnets or mechanical keys are not required as targets, greatly reducing installation time and avoiding misalignment issues and nuisance tripping. The sensors continuously monitor the sensing window for target position and dwell time.

ifm's non-contact fail-safe sensors may be used with any standard safety relay, safety PLC and bus system.

### Fail-Safe Sensors for Series Connection (Gx5 Series)

Up to 10 non-contact, fail-safe sensors can be connected in a series with the ifm clocked input versions. Ideal for monitoring multiple stations, such as robotics cells, the fail-safe sensors will provide an output if one point along the chain is stopped. Using ifm's quick disconnect T-piece connectors, wiring is greatly reduced and simplified.

#### Single connection

Safety relay Safety sensor

#### Series connection (up to 10 sensors)

Safety relay Safety sensors

## ifm's fail-safe sensors are a better alternative

Challenge: 2-piece interlocking mechanical switch is prone to misalignment and time-consuming setup.

ifm solution: Setup is fast. ifm inductive non-contact fail-safe sensors do not require coded magnets or keys.

ifm's safety relays are ideal for connecting electronic and mechanical fail-safe sensors / switches and for use as two-hand control.

## Top product features!

- Light curtains designed for finger protection – 14 mm resolution
- Compact 28 x 30 mm housing profile for less intrusive mounting
- Up to 6 meter sensing range with no software required
- Light curtains offer protected heights of 160 mm to 1810 mm in intervals of 150 mm
- **You don't have to compromise the safety level of your machine because of cost... competitive list prices set a new benchmark for value!**

## Safety light curtains help to protect plant personnel

ifm's Type 4 safety light curtains provide an optical solution for protecting plant personnel in unsafe work areas. ifm Type 4 light curtains provide continuous protection, tighter effective aperture range, redundant circuitry and the highest maximum achievable safety level requirements.

### Why choose ifm for your safety products?

- ifm has taken the complexity out of selecting light curtains by offering only Type 4 light curtains.
- Not only does ifm provide the maximum achievable safety for a light curtain, ifm also offers the optimal resolution models for finger, hand and body protection applications.
- ifm's pricing enables Type 4 light curtains to be used in all applications.
- Fewer variations that cover a broad range of applications allows for standardizing on a smaller number of light curtain models.
- ifm has stock available for immediate delivery.

ifm safety light curtains provide a multiple beam array of infrared light in front of a hazardous area. If any of the beams are blocked by a **finger** in the sensing field, the light curtain sends a signal to the machine to place it in a safe state.

### Woodworking Power Saws

Operators are denied access to power saws any time the saws are in motion. Finger protection safety light curtains allow operators to work in close proximity to power saws without risk of injury.

### Machine tool Hydraulic presses

Presses require large amounts of force and pose a serious safety hazard. ifm safety light curtains will halt the press if an operator gets near the dangerous area.

### Assembly automation SMT (Surface Mount Technology) machine

Light curtains help protect an operator from the hazards associated with material positioning such as mechanical power presses.

## Safety light curtains help to protect plant personnel

ifm's Type 4 safety light curtains provide an optical solution for protecting plant personnel in unsafe work areas. ifm Type 4 light curtains provide continuous protection, tighter effective aperture range, redundant circuitry and the highest maximum achievable safety level requirements.

### Why choose ifm for your safety products?

- ifm has taken the complexity out of selecting light curtains by offering only Type 4 light curtains.
- Not only does ifm provide the maximum achievable safety for a light curtain, ifm also offers the optimal resolution models for finger, hand and body protection applications.
- ifm's pricing enables Type 4 light curtains to be used in all applications.
- Fewer variations that cover a broad range of applications allows for standardizing on a smaller number of light curtain models.
- ifm has stock available for immediate delivery.

ifm safety light curtains provide a multiple beam array of infrared light in front of a hazardous area. If any of the beams are blocked by a **hand** in the sensing field, the light curtain sends a signal to the machine to place it in a safe state.

### Vertical automated storage systems

If the operator reaches into the carousel prematurely or accidentally, ifm light curtains will stop the carousel from rotating to prevent injury.

### Carton erecting

Carton machines can jam during the erecting process. Once the operator breaks the protective area of the safety light curtain, the machine stops to allow the operator to clear the jam.

### Semi-automated assembly station

Line workers reach into a press to remove the assembly. The press is stopped when an operator reaches inside the machine and breaks the protective field of the light curtain. When the operator has removed the assembly, the machine cycle is automatically restarted, and the light curtains resume operation.

## Top product features!

- Light curtains designed for body protection – 300, 400 and 500 mm resolution
- Highest level of safety protection without increasing cost – Type 4 curtains at a Type 2 price
- Up to 12 meter sensing range with no software required
- Light curtains for body protection offer protected heights of 500 mm to 900 mm in intervals of 150 mm
- **You don't have to compromise the safety level of your machine because of cost... competitive list prices set a new benchmark for value!**

## Safety light curtains help to protect plant personnel

ifm's Type 4 safety light curtains provide an optical solution for protecting plant personnel in unsafe work areas. ifm Type 4 light curtains provide continuous protection, tighter effective aperture range, redundant circuitry and the highest maximum achievable safety level requirements.

### Why choose ifm for your safety products?

- ifm has taken the complexity out of selecting light curtains by offering only Type 4 light curtains.
- Not only does ifm provide the maximum achievable safety for a light curtain, ifm also offers the optimal resolution models for finger, hand and body protection applications.
- ifm's pricing enables Type 4 light curtains to be used in all applications.
- Fewer variations that cover a broad range of applications allows for standardizing on a smaller number of light curtain models.
- ifm has stock available for immediate delivery.

ifm safety light curtains for **body** protection prevent access to a machine by using light curtains and optional mirrors to define a hazardous area.

### Palletizer

A palletizer erects a pallet of kegs and places it on a conveyor. Muting sensors are tripped and the pallet is allowed to bypass the light curtain and leave the area. If an operator attempts to enter the palletizing area

from the opposite direction, the light curtain will detect his presence and cut power to the machine.

### Perimeter guarding of palletizing area

Corner mirrors allow a single pair of safety light curtains to be used in perimeter guarding applications. Up to three corner mirrors may be used to "bend" the light into shapes that protect multiple

sides of the dangerous area. ifm light curtains enable a safe and economical way to replace expensive hard guarding.

	For muting applications only 2 x relay (N.O.)	1 x PNP	G2001S	\$504.00

## Technical Specs

Operating voltage: 19.2...28.8 VDC  
 Current rating: 2 x 400 mA  
 Current consumption: Transmitter 42 mA, Receiver 83 mA  
 Safety outputs (OSSDs): 2 x PNP  
 Operating temperature: 14...131 °F (-10...55 °C)  
 Protection: IP67  
 Dimensions (W x D): 28 x 30 mm  
 Connection: M12, Transmitter: 5-pin, Receiver: 8-pin  
 Max. cable length: 100 m  
 Safety category: Type 4 (IEC 61496-1) SIL 3 (IEC 61508) SILcl 3 (IEC 62061) PL d / PL e (EN ISO 13849-1)

## Top product features!

- Multi-function safety relays are compatible with a variety of devices including switches, light curtains, e-stops and two-hand controls
- Connects e-stop buttons with cross-fault and optional simultaneous monitoring
- Two safety output versions available: relay or solid-state
- Solid-state auxiliary non-safety output provides feedback to PLC
- Meets requirements of Category 4 PL e and SIL 3 (IEC 61508)

## Multi-function safety relays reduce stock levels

ifm's multi-functional safety relays are compatible with industry standard safety devices. The versatile safety relays connect single or dual channel emergency stops, mechanical safety switches, transistor-based safety devices, light curtains, two-hand controls and ifm's non-contact safety sensors. All of these devices can be monitored with one relay. The benefit is a large reduction in stock levels that eliminates the need for different types of safety relays for various applications. Dual channel safety devices can be configured to monitor simultaneous logic and cross fault detection across the inputs.

### Safety Relays for Series Connection

Up to 10 non-contact, fail-safe sensors can be connected in a series with the ifm clocked input versions. Ideal for monitoring multiple stations, such as robotics cells, the fail-safe sensors will provide an output if the one point along chain is stopped. Using ifm's quick disconnect T-piece connectors, wiring is greatly reduced and simplified.

## Top product features!

- Safe standstill / underspeed and overspeed models are available
- Safe speed monitors use 2 standard sensors as pick-ups
- 2 safety outputs (contacts)
- Meets requirements of Category 4 PL e and SIL 3
- Low profile safety speed monitors use minimal cabinet space

## Speed monitors for safety applications

**NEW!** ifm offers speed monitors developed for safety applications. Models are available for standstill and overspeed applications. Both styles of speed monitors are suitable for rotational or linear movement and evaluate pulses received from standard PNP sensors.

The DA101S speed monitor is ideal for both standstill and underspeed safety applications. A common application for this monitor is to ensure access doors stay locked until tooling has stopped moving. When the target speed is below the switchpoint, the two OSSD outputs will open.

The DD110S and DD111S speed monitors have been developed for safety-related overspeed monitoring as used in carousels and centrifuges. The DD111S is specifically designed for the low rotational speed of wind turbines. Both units are easily configured via rotary switches. When the switchpoint is exceeded, the 2 OSSD outputs will open.

Speed monitor switch when critical rotational speeds are exceeded or not reached.

## Top product features!

- Pressure switch with fully welded stainless steel measuring cell and housing
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Two solutions: continuous transmission of process values via IO-Link and 2 switching outputs
- Compact design with 1/4" NPT connection
- High accuracy  $< \pm 0.5\%$  and repeatability  $< \pm 0.05\%$  of full range

## PV digital pressure sensor - one sensor, two solutions

**NEW!** The new PV pressure sensor features a thin-film stainless steel measuring cell with integrated process connection. This allows for a fully welded construction, which eliminates elastomer seals. The design delivers a compact sensor with high accuracy, excellent vibration resistance and IP67 / IP69K environmental protection for harsh environments. The sensor also comes with a laser etched label preventing deterioration of sensor information.

### For hydraulic and inert gas applications

The absence of an elastomer seal within the process connection makes the PV ideal for both hydraulic and inert gas applications without limitations. The all-stainless steel wetted parts eliminate chemical compatibility issues found in traditional elastomer seals and offers high over- and burst-pressure ratings.

The integrated IO-Link communication transmits the real process values (i.e. measurement in psi instead of mA) via a highly accurate digital signal. The pure digital communication eliminates analog to digital (A/D) conversion losses and external influences such as electronic noise. The IO-Link interface can also be used to configure sensor parameters, and transmit diagnostic information such as the pressure peak counter.

## Top product features!

- Compact pressure switch for pneumatic applications
- 2-color, 4-digit alpha-numeric display for visual indication of operating status
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Easy installation using integrated mounting holes and accessories
- Flexible outputs available: dual PNP, dual NPN, analog / PNP

## Compact pressure switch for applications in robotics and material handling

ifm's PQ Series pressure switches are designed for pneumatic applications in robotics and material handling. The switches precisely measure the full range of vacuum and pressure typical in these applications.

The PQ Series pressure switch family has been expanded to include versions with analog outputs that are also IO-Link enabled (i.e. part numbers PQ3809 and PQ3834).

The technology is based on a piezoresistive measuring element. The silicon measuring cell is unaffected by liquids (e.g. condensed water) and deposits that might occur in the system. The silicon measuring cell guarantees a high overload resistance as well as an accuracy of  $\pm 0.5\%$ .

Application parameters are established using two pushbuttons. The two-color, four-digit display provides system pressure which can be seen from long distances.

## Various mounting options

- Can be fixed to flat surfaces and profiles using the two M4 drill holes on the front.
- Can be fixed to a DIN rail using the robust DIN rail clip.
- Can be fixed to a pipe or air-duct plate.

## Technical Specs

Operating voltage: 18...32 VDC  
 Maximum load current: 100 mA  
 Current consumption: <50 mA  
 Switch point accuracy: < ± 0.5 % of full range  
 Repeatability: < ± 0.1 % of full range  
 Medium temperature: 32...140 °F (0...60 °C)  
 Wetted parts: Brass, FPM, silicon (coated), PBT  
 Protection rating: IP65

## Top product features!

- Simple setup with mechanical adjustment dials that rotate to quickly establish setpoint and resetpoint
- 316 stainless steel process connection and strain gauge technology provide higher reliability than mechanical pressure switches
- Accuracy is consistent across the range reducing the number of ranges required
- The switch's high accuracy and long-term stability insure the setpoint does not drift
- LEDs provide switching status and power indication

## Mechanical adjustment dials provide simple setup

PK pressure switches feature mechanical adjustment dials that rotate to quickly establish the setpoint and resetpoint. The switch is adjustable without system pressure and supply voltage.

The PK pressure switch is an ideal alternative to mechanical piston pressure switches. The PK switch features a gas-tight measuring cell that reliably detects gas and liquid pressure. The switch withstands aggressive media and detects pressure ranges up to 5800 psi (400 bar).

The PK's compact design is ideal for space saving mounting. Quick electrical connection is made using an industry standard Micro DC connector.

## Simple mounting is plug-and-play

### Electronic PK pressure switch

No moving parts reduces wear and prevents leaks.

### Mechanical piston pressure switch

Piston movement can wear the sealing ring resulting in pressure leaks.

## Top product features!

- Solid state pressure sensors are more reliable than mechanical switches
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- ⚙️ Two solutions: continuous transmission of process values via IO-Link and 2 switching outputs
- Integrated built-in display eliminates the need for a reference gauge; values may be set in green or red providing at-a-glance status indication
- 2 large bright LEDs for output indication can be seen easily from all angles
- Stainless steel construction designed to last in harsh environments

## New generation pressure switches

ifm has provided reliable pressure monitoring for pneumatic and hydraulic applications for more than 20 years.

ifm now introduces the next generation pressure sensor, the PN7 Series, with enhanced features that provide more flexibility in adapting the product to fit your pressure application.

ifm pressure switches are a solid state alternative to mechanical pressure switches. Because there are no moving parts to jam or break, ifm pressure switches eliminate the maintenance headaches of mechanical switches.

The PN7 family now incorporates the best combination of over pressure, burst pressure and long term stability for each measuring range. The technology allows for use in high pressure gas applications as well as liquid applications. Encased in a stainless steel housing, these switches can withstand extreme shock and vibration and provide high accuracy and reliability for most pressure applications.

Through innovative design technology and features that make the switch easy to implement, ifm once again, sets a new benchmark for price/performance with the PN7 family of pressure sensors.

### Compact, reliable and easy to use!

2-color digital display is easier to see from a distance

Robust 316 stainless steel construction

Laser etched part numbers will not fade for future referencing

Sensor can be rotated 345° for optimum visibility after installation

Large bright LEDs can be seen from all angles indicate output status

Simple pushbutton setup allows the sensor to be parameterized in less than 5 minutes with new scroll and enter buttons

QR code for quick access to technical data and installation instructions

Atmospheric reference is achieved via the electrical connection for high IP67 rating

Available with five different process connections, including 1/4" NPT male and female for direct installation. No extra fittings are required.

## Top product features!

- Simple pushbutton setup allows the switch to be adjusted and mounted in less than 5 minutes
- Ceramic pressure sensor element is more reliable than mechanical switches
- Solid state relay output to switch loads up to 2.5 A
- Integrated built-in display eliminates the need for a reference gauge
- Stainless steel construction designed to last in harsh environments

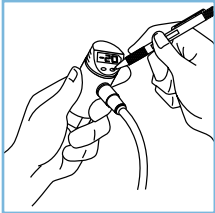

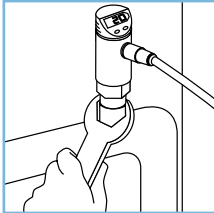

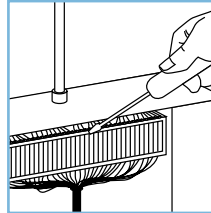

## Customer benefits!

Mechanical pressure switches are not reliable and their installation is time-consuming

1. Mount the switch and connect conduit.
2. Install reference gauge.
3. Apply system pressure.
4. Adjust setpoint and differential.
5. Make electrical connections.

ifm pressure switches have no moving parts and can be installed in less than five minutes

1. Program the switch.
2. Install the switch.
3. Make electrical connections.

## Top product features!

- 4...20 mA fixed range output – for plug and play operation
- IP69K miniature housing – 3/4" diameter by 2 1/2" tall for easy mounting in tight spaces
- Stainless steel measuring cell using thin film technology – for better chemical compatibility, use with high pressure gases, and better burst pressure rating over ceramic technology
- 1/4" integrated process connection – for installation in common applications without additional fittings
- Laser etched label – remains readable even in the harshest environments

## Compact one-piece design, fast response time

**NEW!** The new compact PT pressure transmitter is ideal for monitoring pressure in hydraulics and pneumatics applications as well as inert gases where mounting space is limited.

These pressure sensors feature a thin film measuring cell which is welded directly to the process connection. No separate seal is required. This innovative design technology guarantees high accuracy in a compact housing.

Constructed of stainless steel, the robust PT pressure sensors are designed to withstand extreme shock and vibration in harsh environments. The one-piece, completely welded housing eliminates moisture ingress and is rated IP 67 / IP 69K.

The transmitter provides an analog output at an exceptionally fast response time of 1 millisecond and reliable repeatability of < 0.05 %.

With its robust housing, fast response time and low cost, the PT Series transmitters are a great value!

With its fast response time of 1 millisecond, the miniature PT pressure transmitter accurately monitors pressure on a high-speed pump.

## Top product features!

- Ceramic sensing element provides high burst / over pressure protection and exceptional reliability
- Robust stainless steel housing
- Repeatability 0.15% of full range
- Ideally suited for hydraulic applications and applications subjected to pressure spikes
- No compromise in performance at a great price

## Compact size fits easily in applications with limited mounting space

The compact PX pressure transmitter provides an analog output for reliable pressure indication. Pressure transmitter output options include 4...20 mA and 0...10 V.

PX pressure transmitters are an ideal alternative to mechanical piston pressure transmitters. The transmitters feature a ceramic measuring cell that reliably detects line pressure and withstands aggressive media.

### Capacitive sensing technology using ceramic measuring cells

The most important element of the capacitive sensing technology is the ceramic pressure measuring cell made of aluminum oxide ( $Al_2O_3$ ).

After assembly, the ceramic cell element resembles a plate capacitor with a reference electrode and measuring electrode placed 10  $\mu m$  apart. The capacitance is inversely proportional to the distance between the electrodes. If the distance changes by a small value because of an increase in pressure applied to the cell, the capacitance changes proportionately. This signal is then processed by a microprocessor.

### Accurate and reliable

### Technical Specs

Supply voltage: PX3: 9.6...32 VDC; PX9: 16...32 VDC  
 Max. load for PX3: [(supply voltage - 9.6) x 50] Ω; 720 Ω at 24 VDC  
 Min. load for PX9: 2000 Ω  
 Medium temperature range: -13...194 °F (-25...90 °C)  
 Accuracy: < ± 0.75% of full range  
 Repeatability: < ± 0.15% of full range  
 Wetted parts: 303 stainless steel, ceramic, FPM  
 Protection rating: IP68 / IP69K (363 psi / 25 bar ranges and lower: IP65)

## Top product features!

- Transmitter with multiple outputs including scaleable analog for flexibility
- Integrated built-in display eliminates the need for a reference gauge; values may be set in green or red providing at-a-glance status indication
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- 2 large bright LEDs for output indication can be seen easily from all angles
- Stainless steel construction designed to last in harsh environments

## New generation pressure transmitters

ifm has provided reliable pressure monitoring for pneumatic and hydraulic applications for more than 20 years.

ifm now introduces the next generation pressure transmitter, the PN2 Series, with enhanced features that provide more flexibility in adapting the product to fit your pressure application.

The PN2 family now incorporates the best combination of over pressure, burst pressure and long term stability for each measuring range. The technology allows for use in high pressure gas applications as well as liquid applications. Encased in a stainless steel housing, these transmitters can withstand extreme shock and vibration and provide high accuracy and reliability for most pressure applications.

Through innovative design technology and features that make the transmitter easy to implement, ifm once again, sets a new benchmark for price/performance with the PN2 family of products.

### Compact, reliable and easy to use!

2-color digital display is easier to see from a distance

Robust 316 stainless steel construction

Laser etched part numbers will not fade for future referencing

Sensor can be rotated 345° for optimum visibility after installation

Large bright LEDs can be seen from all angles indicate output status

Simple pushbutton setup allows the sensor to be parameterized in less than 5 minutes with new scroll and enter buttons

QR code for quick access to technical data and installation instructions

Atmospheric reference is achieved via the electrical connection for high IP67 rating

Available with 5 different process connections, including 1/4" NPT male and female for direct installation. No extra fittings are required.

## Top product features!

- 3-in-1 unit: Transmitter and switch with the advantages of a gauge display
- Gauge display indicates the current operating pressure relative to the overall range
- Pointer does not require damping liquid and is driven by an integrated stepper motor
- Transmitter can be configured in less than 5 minutes using two optical pushbuttons
- Display can be rotated 350 degrees for optimal visibility

### PG transmitter features highly visible gauge with the functionality of a pressure sensor

### High-precision measurement

ifm's PG Series pressure family offers a 3-in-1 solution for pressure applications. The PG is a transmitter, switch and gauge in a light-weight, stainless steel housing.

## Top product features!

- Pressure compensation via internally vented cable
- 2-wire connection technology with 4...20 mA analog output
- Stainless steel housing rated IP68 for durability and long-term immersion
- Models available with measuring ranges of 100, 240 and 400 inH<sub>2</sub>O
- Good overall accuracy and long-term stability

## Submersible pressure transmitter for liquid level applications

ifm's PS3 Series submersible pressure transmitters indicate liquid level measurement in tanks, containers, sumps, wells and river water.

The two-wire, stainless steel transmitter is inserted directly into the medium and provides a 4...20 mA analog output signal. Its watertight, vented polyurethane cable withstands over 220 pounds of strain.

The transmitter measures liquid level through pressure sensing technology. The weight of the liquid creates pressure on the transmitter's measuring element. As the liquid level changes, the output changes. The transmitter's accuracy of 0.5% of full scale and repeatability of 0.1% contribute to the operational reliability of the transmitter.

Models are available with measuring ranges of 100 inH<sub>2</sub>O, 240 inH<sub>2</sub>O and 400 inH<sub>2</sub>O with a variety of cable lengths.

The combination of analog output signal, two-wire technology and various mounting accessories allow easy integration into existing applications.

## Top product features!

- Thermal sensing principle with no moving parts is more reliable than mechanical switches
- Replaces mechanical switches for monitoring liquids and gases
- Wide measuring range to cover more applications
- LED bar graph display for flow and setpoint
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback

### ifm's flow switches are an ideal alternative to mechanical flow switches

The SI flow switch features microprocessor-based pushbutton programming and highly visible LED status of flow and output conditions. They are ideally suited to flow / no flow applications in most industries.

ifm effector flow switches offer a variety of process connections to fit most applications. This flexibility allows the switch

to be easily installed in many different applications that have various mounting requirements.

ifm effector flow switches are solid state alternatives to mechanical flow switches for sensing the flow rate of liquids and gases. Because there are no moving parts to jam or break, ifm effector flow switches eliminate the maintenance headaches of mechanical flow switches.

**Challenge**  
Mechanical flow switches that stick.

**Solution**  
ifm flow switches have no moving parts that can stick or break.

### How to convert flow rate to flow velocity

1. Find the volumetric flow rate for the switchpoint on the y-axis. (Example: 10).
2. Follow the line horizontally until it intersects the diagonal line for the pipe diameter. (Example: 2").
3. From that intersection point, drop straight down to read the velocity on the x-axis to find the flow velocity. (Example: 30).

**Ideal switchpoint setting ranges for the following flow models:**

**SI 5xxx** (see page 165): 3...100 cm/sec. for water  
**SF xxxx** (see page 167): 3...60 cm/sec. for water

If the velocity falls within the ideal switchpoint range (as indicated between the bold lines in the chart: 3...100 cm or 3...60 cm), the switch will be very repeatable. If it does not fall within that range, consider increasing the pipe size or reducing the switchpoint flow rate.

## Top product features!

- 2-piece monitoring system for remote flow indication
- Sensor connects to variety of control monitors
- Ideal for applications where mounting space is limited
- Reduced inventory via modular mounting adapter system
- High temperature model available

## Direct or remote mount flow monitoring systems offer a modular solution for installation

Remote flow probe connects to a cabinet control monitor.

Field-mount monitors can be direct mounted or remote mounted.

ifm's flow monitoring system is a modular solution for direct or remote indication of fluids and gases. With no moving parts or paddles to stick or break, ifm's flow monitor provides reliable flow detection in a variety of equipment. This modular solution is ideal for environments with limited mounting space or locations that do not permit local installation of the control monitor.

### Cabinet mount control monitor

ifm's cabinet mount control monitor offers easy to access terminal connections and can be wired prior to installing inside the control cabinet. The connection to the flow probe is low voltage and does not require a conduit for protection. The control monitor's LED display provides a visual indication of flow and flow setpoint. Separate LEDs indicate temperature and wire break relay output.

### Field mount control monitor

ifm's field mount control monitor connects to multiple probes and can be used directly at the application or remote mounted. The monitor features pushbutton programming and a bar graph LED display for visual operating status.

## Component guide

Select a control monitor depending on your application. Next, determine an electrical connection, flow probe and process connection.

## Top product features!

- Flow meter optimized for water, oils, glycol and air
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of two process values: flow rate and temperature
- Fast response time and integrated temperature measurement
- Red / green numeric display for process values and at-a-glance status
- Internal pipe diameter selectable from 0.6" to 16" and selectable outputs for switching, frequency and analog

## Thermal flow meter with digital display for liquids and gases

**NEW!** The new SA Series flow sensors are designed to detect and measure the flow and temperature of oil, water, glycol and air in large internal pipe diameters up to 16 inches.

These volumetric flow sensors operate using the calorimetric measuring principle. The sensor tip houses two RTD elements and a heat source. When power is applied, the tip of the sensor is heated. The flow rate is determined as these RTDs react to the physical effect of a flowing medium conducting heat energy away from the sensor tip. This temperature-based operating principle can reliably sense the flow of virtually any liquid or gas.

### Quick setup

A simple pushbutton menu allows the sensor to be programmed to fit your application setpoints. Switching, frequency or analog outputs are also selectable. Designed with an integrated digital display, values may be set in green or red for indicating if process values are within range or if limits have been exceeded. Parameters may also be set via ifm's LineRecorder software or IO-Link.

### Various mounting options

ifm's SA Series flow sensors are available in various probe lengths and process connections to fit most mounting requirements.

*ifm flow sensors are solid state alternatives to mechanical flow switches. Because there are no moving parts to jam or break, ifm flow switches eliminate the maintenance of mechanical flow switches.*

## Top product features!

- Flow meter monitors flow rate and temperature of water and oil-based media
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of two process values: flow rate and temperature
- Fast response time 10 ms: great for cycling applications
- Two-color digital display for at-a-glance status
- Ideal for applications with rapid temperature changes of media

### ifm mechatronic flow meter

The ifm SBN Series mechatronic flow meter monitors water and oil-based media and provides reliable flow control for various flow applications.

The mechatronic flow meter sensing principle ensures extremely fast response time and can be easily set via pushbuttons or IO-Link.

The SBN mechatronic flow meter is ideal for applications with rapid temperature changes or where fast response time is required, such as:

- Spindle coolant flow monitoring for drilling
- Furnace cooling water flow detection
- Cycling coolant flow monitoring in machining applications

#### SBN Principle of operation

The flow sensor utilizes a spring-supported piston that is lifted by the flowing medium. The piston position is detected via a magnetic sensor and is output as a binary or analog signal. The spring resets the piston to its initial position with decreasing flow. This allows the sensor to be mounted in any position (horizontally or vertically) and function as a check valve.

The mechatronic sensor reliably monitors the flow of water in cooling loops of an induction furnace.

## Top product features!

- Vortex flow meter simultaneously monitors flow rate up to 25 gpm and fluid temperature up to 194° F
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of two process values: flow rate and temperature
- Two-color TFT digital display rotates for at-a-glance status
- Mounts in-line with rotatable process connections for quick installation
- Selectable outputs for switching and frequency or dual analog

## Reliable vortex flow meter for water-based applications

**NEW!** ifm's SV Series vortex flow meter is designed to simultaneously monitor flow rate and detect fluid temperature of circulating water in industrial applications.

Encased in a compact robust housing for harsh environments, the meter utilizes the vortex flow principle. Behind a blunt body (or shedder) integrated in a measuring pipe, the flowing medium generates swirling vortices depending on the velocity. A piezoceramic sensor detects these vortices. Since the cross-section of the pipe is known, the number of the vortices determines the flow rate, independent of the medium's pressure and temperature fluctuations. The vortex flow technology enables a simple sensor design that can be easily manufactured at a very low cost.

### At-a-glance display and easy installation takes less than five minutes

The meter provides a high contrast TFT LCD digital display that can be customized to best suit the application. The setpoints are established through a simple pushbutton menu by using scroll and enter buttons. The meter can be programmed to provide switching output (flow rate and/or temperature), flow frequency, or analog output (flow rate or temperature).

The meter's NPT process connection is easy to mount in line and fits either 1/2 inch or 3/4 inch piping.

With features that ensure reliability and convenience, ifm's compact SV Series Vortex flow meter offers an excellent price / performance value.

*In welding applications, it is essential to control the flow rate and temperature of cooling water to prolong the life of the welding tip and to assure that the weld cools rapidly for optimum quality. The SV Vortex flow meter is an ideal solution.*

## Top product features!

- Magnetic inductive flow technology provides high-precision measurement of all conductive media up to 160 gpm
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- 📡 Digital transmission of three process values: flow rate, flow volume and temperature
- Compact, in-line stainless steel housing with NPT connection – fits up to 2" pipes
- 4-digit numeric display indicates flow rate, total volume and temperature
- No compromise in quality – high performance at a great price

## The next generation of magmeters from ifm

ifm's SM Series Magmeter is designed to reliably detect the flow rate of conductive media up to 160 gallons per minute. The stainless steel, mechanically-robust design mounts directly in-line providing a compact, low-profile installation for process control.

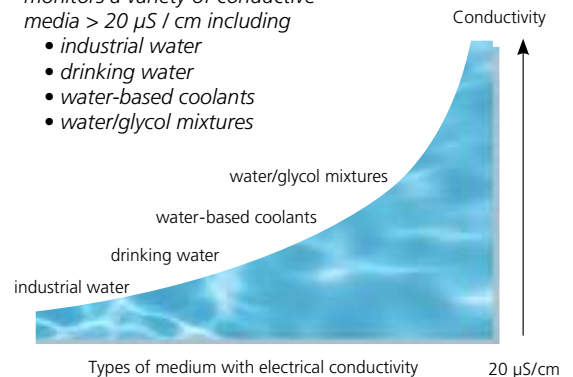

A 4-digit numeric display with pushbutton setup simultaneously indicates flow rate, fluid temperature and total volume. Simple to setup and easy to install, the SM is a reliable alternative to traditional flow meters and mechanical flow switches.

The next generation of magmeters from ifm – smaller in size at a great price/performance

The volumetric flow meter monitors a variety of conductive media > 20  $\mu\text{S/cm}$  including

- industrial water
- drinking water
- water-based coolants
- water/glycol mixtures

### Typical applications

- Flow and temperature monitoring through heat exchangers
- Guard welding equipment against loss of cooling water
- Batching applications
- Totalize flow of process water
- Pump run dry protection

## Top product features!

- Simultaneously monitors flow rate, fluid temperature and totals liquid volume
- Monitors water, glycol and oil up to 53 gpm
- Integrated display with pushbutton setup
- Ultrasonic sensing principle uses no moving parts
- Selectable outputs for switching, totalizer and pulse

## ifm's in-line flow meter provides accurate feedback for your critical flow applications

The SU Ultrasonic Flow meter is designed to simultaneously monitor flow rate, detect fluid temperature and provide a totalizer function for a variety of flow applications. With its compact design, the ultrasonic flow meter is intended for small diameter pipes – 1" or less.

The meter provides a four-digit numeric display of the liquid's flow rate (gal/min or l/min), total quantity accumulated (gallons or liters), and medium temperature (°F or °C). The setpoints are established

through a simple pushbutton setup. The meter can be programmed to provide switching output (flow rate and/or temperature), pulse output (flow volume), or analog output (flow rate or temperature).

### Batching applications

The ultrasonic flow meter has the capability to count the number of gallons of fluid. In addition to the totalizer display, the meter provides a pulse output for each gallon (or liter).

## SU Ultrasonic Flow Meter – Principle of Operation

Ultrasonic technology is based on the differential transit time principle. Sound pulses are alternately emitted and detected with and against the direction of flow using piezoceramic sound transducers. The flow rate is calculated from the difference of the transit time.

## Top product features!

- Accurate point-level indication of liquids and solids with low dielectric constant (e.g. oils, plastic pellets)
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Continuous digital transmission of capacitance value with IO-Link
- Senses level through mounting well, sight glass, plastic tank or by direct contact with media
- Sensor offers superior immunity to electrical noise
- Broad range of mounting well accessories

## Reliable point-level detection with pushbutton teach function

ifm point-level sensors provide accurate level detection of solid and liquid materials. A ring LED display provides output status indication that is visible from long distances.

### Pushbutton teach function

The KI and KG Series point-level sensors feature a two pushbutton teach function that calibrates the proper setpoint value and simplifies the setup process. The sensor is quickly and easily adjusted for a specific application. The integrated micro-processor automatically balances the sensitivity to provide the safest operating condition.

Plastic materials are now being dried at higher temperatures producing very low moisture content. The resulting materials can cause sensing problems for traditional capacitive level sensors.

ifm's capacitive level sensors incorporate sensing electrodes and patented circuitry to detect low-moisture, low-density materials. Combined, these innovations enable the sensors to perform in today's plastic processing applications.

### Improved noise immunity

ifm's patented "charge balance" circuit design for level sensors offers reliable noise immunity and enables ifm level sensors to perform effectively in high noise level environments.

## Top product features!

- No moving parts for reliable point-level indication
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Easy setpoint adjustment with multi-turn potentiometer
- Senses level through mounting well, sight glass, plastic tank or by direct contact with media
- Sensor offers superior immunity to electrical noise

## Point-level sensor with easy setpoint adjustment saves time!

**NEW!** ifm's KI6000 and KG6000 point-level sensors provide accurate level detection of solid and liquid materials. A unique 11-LED bar display indicates power and output and alerts the user if conditions have changed, build-up is occurring or if more material needs to be delivered.

The setup process is simplified by using a potentiometer to select a normally open or normally closed output and to adjust sensitivity for your application.

### Reliable level detection

ifm offers a variety of point-level sensors to fit your application. Standard housings are available with AC or DC voltage and various

connections. Using capacitive technology, they feature a potentiometer that adjusts the sensitivity of the sensors for a specific application. LEDs provide power and output indication. LEDs can alert if conditions have changed, buildup is occurring, or if more materials need to be delivered.

### Improved noise immunity

ifm's patented "charge balance" circuit design for level sensors offers reliable noise immunity and enables ifm level sensors to perform effectively in high noise environments.

The KI and KG sensors detect granulars such as plastic regrind.

Using a mounting well, the sensor detects the level of liquid.

## Top product features!

- Detects bulk materials or liquids through non-metallic materials such as plastic and glass
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Continuous digital transmission of capacitance value with IO-Link
- Sensor offers low-profile mounting – less than 15 mm high – provides same sensing range as traditional 30 mm tubular sensor
- Mounts on a flat surface, sight glass, plastic tube, or bypass pipe using brackets or cable ties
- Several models offer auto detection of PNP or NPN output loads

## KQ Series point-level sensor with simple pushbutton setup

The KQ capacitive point-level sensor offers low-profile mounting for level sensing applications. The sensor detects bulk materials or liquids through non-metallic materials such as plastic and glass. The compact sensor is only 14 mm high and has the same sensing range as a traditional 30mm tubular sensor.

Application parameters are quickly set up with the sensor's pushbuttons. The sensor's teach function eliminates difficult sensitivity adjustments. Several models offer automatic detection of the PNP or NPN output loads. ifm's patented "charge balance" circuit design provides reliable noise immunity and enables the sensor to reliably perform in high noise level environments.

The sensor mounts on a flat surface, sight glass, plastic tube, or bypass pipe using brackets or cable ties. The 3-wire DC sensors are available in three models: 2m cabled, pigtail with M8 connector, and pigtail with M12 connector.

## Detects bulk materials and liquids through non-metallic materials

Detection of liquids on a bypass tube.

## Top product features!

- Protects against overflow in fluid sensing applications
- Capacitive sensing principle with no moving parts
- Polypropylene housing resistant to most chemicals
- Top-down mounting and simple setup with two pushbuttons
- Available in four lengths with adjustable insertion depths

## New generation of overflow level sensors

The LI Series level sensor offers reliable limit level detection in tanks, indicating high or low level of hydraulic oils and coolants. They may also be used to monitor the minimum level, leakage or overflow of tanks.

The sensor can be used as an independent overflow protection device or with other level sensors for added security against overflow.

The sensor's 16mm diameter probe is inserted directly into the fluid and is highly resistant to aggressive oils and lubricants. Setup and adjustment is easy using the sensor's "output on - output off" pushbutton teach function without removing the sensor from the process.

### Pushbutton setup

The operating concept enables setting and adjustment of the output function via two pushbuttons. Deposits can be suppressed during operation without carrying out a new adjustment.

## Top product features!

- Point level sensor with the most reliable deposit suppression on the market
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Media differentiation is possible via IO-Link
- Plug and play setup with factory media settings for water or oil
- Compact stainless steel housing with IP69K environmental protection
- Robust electronics with high shock and vibration resistance

## Point level sensor reliably suppresses residues, splashes and foam

**NEW!** The LMC family reliably monitors level in a variety of industrial applications including machine tools, wastewater management, hydraulic systems, and pump run dry protection. Additionally, the back thread option provides a top-mount level solution for custom depths.

### Versatile sensor for all media types

The LMC sensor can be set to detect almost any liquid or viscous media as well as bulk materials. Permanent media temperatures up to 212 °F (100 °C) or heavy adhesion are no problem for the LMC.

Identifying two different types of media is possible due to the two programmable switching outputs. Parameters can be set for each output independently with IO-Link LR device software and USB cable accessory.

The LMC sensor is ideal for pipe level applications and eliminates obstructions in the flow path that reduce throughput.

Company	IO-Link	Position Sensors		Cylinder / valve position	Photoelectrics / lasers / fiber optics	Distance / Application specific	Ultrasonic	Motion Control	Vision Sensors
		Inductive	Capacitive					Encoders / Speed monitors	2D / 3D inspection
1 - 5	6 - 21	22 - 55	56 - 61	62 - 71	72 - 111	112 - 117	118 - 119	120 - 127	128 - 143

## Top product features!

- Ideal for level detection of water-based media in compact tanks
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- ⚙️ Easy setup and commissioning with IO-Link parameterization
- No moving parts – replaces float switches
- Built-in switching and analog output
- Simple mounting with cut-to-length measuring probe

## High performance at a great value

The **efector gwr** provides all of the advantages of reliable level detection using innovative guided wave radar technology at a very low price. Alternative level solutions may offer a lower price but may not perform in challenging applications.

Mechanical float switches can stick in an application due to deposits. Vibration forks offer slightly better performance, but multiple units are required to detect the level of the medium. Traditional GWR level sensors offer an improved performance, but at a very high price point.

## Easy installation

The **efector gwr** is directly mounted into the tank via a threaded process connection or metal bracket. Power and output are provided with an M12 connector. If needed, the probe can be cut to length by the user.

## Longer probe lengths

The LR Series offers long probe lengths for depths up to 63".

Oil and water-based media

## Top product features!

- Modular level sensor is ideal for level detection of oils or water-based media in compact tanks
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- ⚙️ Easy setup and commissioning with IO-Link parameterization
- Stainless steel housing with no moving parts that can stick is an ideal alternative to float switches
- Built-in switching and analog output
- Simple mounting with cut-to-length measuring probe

## Reliable level detection for oils or water-based media

### Versatile level sensor for harsh applications

The LR Series level sensor's measuring principle uses guided wave radar technology to detect liquid level in applications such as parts cleaning, coolant monitoring, water treatment, hydraulic power units and hot glue in corrugated cardboard manufacturing. This technology enables a powerful signal and the ability to suppress foam and buildup that causes false triggers.

### Quick and easy installation

The modular design consists of a compact, 316 stainless steel sensor housing with digital display, pushbutton setup and stainless steel measuring probe that easily attaches to the sensor housing. A wide variety of common adapters and probe lengths are available. Probes can be cut to fit any custom length.

To monitor oil and low-dielectric fluids, a coaxial tube is required that slips over the probe and provides a direct 3/4" NPT (or G3/4 BSPP) process connection.

### Resistant construction materials

The one-piece, completely welded LR2050 sensor eliminates moisture ingress and has a high protection rating of IP 69K. Parameters are easily set by using the sensor's pushbutton menu, ifm's LineRecorder software or IO-Link.

ifm's LR Series continuous level sensor has no moving parts to stick and break, withstands the harshest of environments and provides long life-in-application.

## Top product features!

- *Electronic level sensor replaces mechanical float switches that can stick*
- *Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback*
- *Pushbutton setup allows the sensor's parameters to be easily adjusted without removing the sensor from the process*
- *Independent overflow protection*
- *Highly visible numeric display*
- *Models are available with integrated temperature monitoring*

## Replaces mechanical float switches

Fluids that contain particles such as metal chips can cause floats on traditional mechanical level switches to stick. ifm efector's LK level sensor is an electronic "floatless" sensor that accurately detects fluid level without any moving parts. Using ifm's patented capacitive sensing technology, the sensor determines level by measuring the point of dielectric contrast that occurs at the level height.

LK level sensors feature an enhanced software algorithm that scans 16 sensing fields along the length of a probe to determine the point at which the change in dielectric occurs. Upon startup, the sensing fields are evaluated every eight milliseconds to provide precise continuous level indication.

### Replaces up to four binary switches

ifm's LK level sensors are available with 2 or 4 switching outputs, as well as an analog and switching output model. Thus, one level sensor can replace up to four binary switches, reducing wiring, material, and mounting costs. Versions are available with a single switchpoint indicating an overflow alarm.

Pt element at the base of the probe and are capable of monitoring temperature as well as continuous level indication.

## Easy mounting

ifm's electronic LK level sensors can be inserted into a tank opening as small as 20 mm in diameter.

## Top product features!

- One-piece temperature switch with high protection rating for harsh environments
- Measuring range -58...302 °F (-50...150 °C)
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- ⚙️ Two solutions: continuous transmission of process value via IO-Link and 2 switching outputs
- Extremely high accuracy of  $\pm 0.5$  °F

## Two temperature sensors in one

**NEW!** The TV temperature sensor provides long-term, highly accurate temperature monitoring of fluids in a variety of industrial applications. The one-piece housing, with integrated electronics, 6 mm diameter probe and threaded process connector, is made of durable 316 stainless steel and can withstand harsh environments. Its compact design is ideal for mounting the TV sensor in tight application spaces.

### Fast and precise

ifm's TV temperature sensors use a high accuracy Pt1000 class A RTD with a low mass tip design for fast response.

The sensor has two switch points that can be easily set via the Line Recorder device software. The sensor can be integrated into any control system either by using the dual switching outputs or via an IO-Link master block connected to the plc.

### Reliable digital transmission via IO-Link

IO-Link provides a pure digital transmission that is more accurate than analog signal transmission. Using IO-link, the TV temperature sensor reliably transmits minimum and maximum temperature values to the controller. By continually analyzing real-time process data, machines can be maintained with greater accuracy and operators can better maximize overall equipment effectiveness.

## Top product features!

- Simple setup with rotating adjustment dials that quickly establish setpoint and resetpoint
- Space-saving design with no moving parts that can wear or break
- Bright LEDs indicate switching status and power
- Fast response times (less than 3 seconds)
- One TK switch replaces two mechanical switches

## Compact temperature sensor with 316 stainless steel probe

The compact TK Series temperature switch and its integrated 316 stainless steel RTD probe measure only 4" long and can be directly mounted into a pipe.

Two mechanical setup dials rotate to quickly establish the setpoint and resetpoint temperatures. The switch's high accuracy insures that the setpoint does not drift and calibration is not required. Two bright LEDs indicate switching and operating status.

With no moving parts to stick in the process or break, the ifm TK Series switch maintains high performance and long term stability. A locking device prevents unintentional setpoint changes.

ifm's TK temperature sensor is a new benchmark for price / performance value.

## Quick setup! Rotating setup dials establish parameters

TK temperature switches feature mechanical adjustment dials that rotate to quickly establish the setpoint and resetpoint.

Company	IO-Link	Position Sensors					Motion Control	Vision Sensors	
	IO-Link	Inductive	Capacitive	Cylinder / valve position	Photoelectrics / lasers / fiber optics	Distance / Application specific	Ultrasonic	Encoders / Speed monitors	2D / 3D inspection

## Top product features!

- **Integrated solution:** RTD, display and switching/transmitter output
- **Integrated process connections:** 1/2" NPT, 1/4" NPT, G 1/2" and G 1/4"
- **Additional features** such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- **Digital transmission** of process value eliminates analog signal drift and noise
- **Parameter setup** in less than 5 minutes with 3-pushbutton menu
- **Configurable** for dual switching output (2 x PNP / NPN) or 1 switching and 1 analog output (4...20 mA / 0...10 V)

## Enclosure free, local mounting

ifm's compact TN Series process temperature sensors provide highly accurate temperature indication of fluids. The sensors are self-contained units that feature an integrated control monitor and probe. The sensor's robust stainless steel probe is resistant to aggressive media, withstands shock and vibration and features a rotatable display for system temperature.

These models simplify installation in small pipes where local indication is needed. The monitor's integrated display allows a user to view temperature directly at the process. The robust, stainless steel housing with-

stands harsh conditions and is mounted without the need for an enclosure or control box. With its flexible design, the temperature monitoring system adapts to most applications.

## Pushbutton programming

Using the monitor's microprocessor-based pushbutton setup, users can toggle through a variety of menu items. Two output options are available: models with scaleable analog and switching outputs, and models with dual PNP / NPN outputs. The switching output has an independent setpoint and reset-point that can be programmed as normally open or normally closed.

## Versatile mounting

A rotatable display allows the process temperature to be viewed from any angle.

## Top product features!

- One-piece temperature transmitter with 2-wire loop power installation and maximum temperature up to 200 °C (392 °F)
- Fast response time: T05 / T09 = 1/3 sec
- LED indicates the operating status
- Installation lengths from 25...150 mm
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of process value eliminates analog signal drift and noise

### Compact one-piece design, fast response temperature transmitters

ifm's new line of TA2 transmitters offer an ideal combination of features, performance and value. The TA2 is a compact transmitter with a 4...20 mA current output and pre-scaled to common measuring ranges. Scaling over the maximum measuring range is done simply via LineRecorder or IO-Link.

The bright LED indicator located in the M12 connector gives visible indication of operational status.

#### Ready to install

Pre-programmed and ready for use, the one-piece design with integrated electronics, 6 mm diameter probe and threaded process connectors makes ordering easy with a single part number.

#### Fast and precise

The TA2 transmitters use a high accuracy Pt1000 class A RTD with a low mass tip design for fast response.

Integrated electronics and factory calibration ensure a reliable ready-to-use transmitter for monitoring temperature in industrial automation applications.

Fluid temperatures are critical measurements in process applications. The TA2 transmitter is ideal for monitoring their process fluids.

## Top product features!

- Transmitters provide highly accurate temperature indication
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of process value eliminates analog signal drift and noise
- One-piece 316 stainless steel housing features integrated electronics, process connector and Class "A" RTD probe that are laser-welded and factory calibrated
- LED indicates the operating status of the TA; the bright, 4-digit LED display of the TD indicates measured temperature directly at the instrument

## Temperature transmitters are completely assembled, calibrated and ready to install

**NEW!** The TD and TA Series temperature transmitters monitor the temperature of liquids in industrial automation applications. The one-piece housing is made of durable 316 stainless steel to withstand tough environments. The 2-wire loop powered programmable transmitter is pre-scaled for accuracy over the full working range and calibrated to within 0.5 °F. A bright, 4-digit LED display of the TD is protected with a high performance polymer display window that is resistant to chemicals and high temperatures.

Temperature measurement uses high accuracy Pt1000 class A RTDs (resistive thermal detector). Evaluation electronics are optimized for accuracy over the full working range and calibrated to within 0.5 °F.

The highly engineered tip design reduces thermal mass and precisely locates the RTD element with a constant position and force. The benefit of the tip design is very fast reaction speeds of 1 second to 50% and 3 seconds to 90% of the temperature change. There is no calibration or matching of the RTD with the transmitter module.

The TD and TA come fully assembled and factory calibrated for the highest degree of reliability. This saves both installation and commissioning time.

### One-piece solution mounts directly in process

The TD temperature transmitter reliably monitors the fluid temperature in many industrial applications.

Challenge	Solution
<p>Traditional sensors require costly calibration and matching of the transmitter with the RTD probe. The assemblies do not have displays for local indication. The connection head and well assemblies are prone to damage from moisture ingress.</p>	<p>The Pt1000 sensor element, evaluation electronics and LED display are calibrated to operate as a system solution for your process monitoring. The one-piece device eliminates wiring issues and moisture ingress.</p>

Process and compression fittings attach to the RTD probe to provide a secure connection in the process.

Optional thermowell mounting allows the sensor to be removed without stopping process.

A compression fitting and nylon ferrule are required for thermowell mounting.

## Top product features!

- Compact transmitter with "Lock in Place" M12 connectors
- Plug-and-play connection eliminates wiring errors
- ⚙️ Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- ⚙️ Digital transmission of process signal eliminates analog signal drift and noise
- Integrated LED confirms operating status
- Over-molding technology guarantees integrity in harsh environments

## Turns any RTD into a programmable 4...20 mA temperature transmitter

The innovative TP transmitter module with "plug and play" M12 connectors solves the common installation and environmental problems associated with conventional terminal chamber-head transmitters.

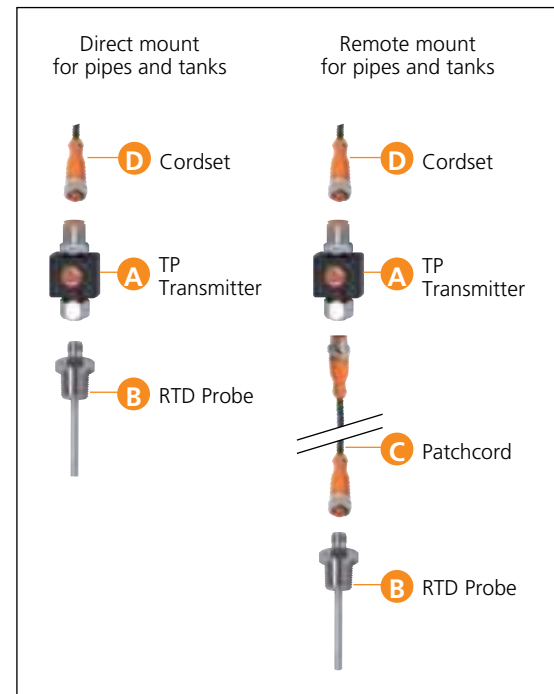

Error sources from screw terminals, wiring mistakes, and fluid ingress are eliminated. An integrated LED gives local indication that the transmitter is powered and transmitting.

Challenge	Solution
 <p>Bulky traditional head transmitters are costly and are subject to moisture ingress.</p>	 <p>ifm's compact TP transmitter is rated to withstand liquid ingress and provide reliable temperature indication</p>

### Completely configurable

Compatible with any Pt100 or Pt1000 probe, the TP temperature module verifies the type of RTD and automatically makes the correct settings. Usable with 2, 3, or 4-wire RTDs, the TP can be scaled and offset using ifm's USB interface. With its "overmolded" construction, the TP is suitable for harsh environments allowing for use in almost any application.

## Top product features!

- Temperature monitor has integrated display with switching and transmitter outputs
- Dual color (red / green) display for at-a-glance indication; large bright LEDs can be seen from all angles and indicate output status
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of process value eliminates analog signal drift and noise
- Directly interfaces with any 2, 3, and 4 wire RTDs

## More compact and easier to install than head-and-well assemblies

The TR Series process temperature monitors provide highly accurate temperature indication of fluids. The monitor's integrated display allows a user to view temperature directly at the process. The robust, stainless steel housing withstands harsh conditions. Programmable in either °F or °C, the highly-visible display can be viewed from a distance which is advantageous in low-lit areas.

Challenge	Solution
<p><i>Bulky head-and-well assemblies with open cavities are subject to liquid ingress and do not have localized displays.</i></p>	<p><i>ifm's zero-leak, compact temperature monitor connects to a variety of RTDs and features local numeric display.</i></p>

### Two monitors available:

- Model TR2439 provides a scaleable analog and switching output.
- Model TR7439 features a dual switching output.
- Both monitors have a temperature range of -40 to 1112 °F and interface with 2-, 3- and 4-wire RTDs (Pt 100 or Pt 1000). The compact monitors feature a 4-digit numeric LED display that indicates temperature in 0.1 °F resolution.

## Top product features!

- A variety of RTD probe lengths offer a wide range of insertion depths
- Various thermowells are available that allow the probe to be removed without shutting down the process
- 316 stainless steel design detect rapid temperature changes and is compatible with a wide range of chemicals
- For a custom temperature monitoring system, RTDs can be used with or without ifm's TR control monitor or TP transmitter module
- Standard M12 connectors allow for a multitude of mounting options

### ifm's modular temperature components allow flexibility in any application

Select an RTD probe and process fitting that will suit your application. Optional thermowells allow the RTD probe to be removed without stopping the process.

#### A Select an RTD probe

*ifm stainless steel temperature probes are available in 6 mm, 8.2 mm and 10 mm diameters. Probes are available in varying lengths to suit a wide range of installation depths.*

#### B Select a process / compression fitting

*Process and compression fittings attach to the probe to provide a secure connection in the process. Models are available in 1/4", 1/2", 3/4" and 1" NPT, G 1/4 and G 1/2 BSPP and weldable adapters.*

#### C If needed, select a thermowell

*Optional thermowell mounting allows the RTD probe to be removed without stopping process. Thermowells are available in various diameter options and lengths.*

### Selection Guide for RTD Probes, Fittings and Thermowells

A 6 mm diameter · Pt 100 · M12 connector Integrated 1/2" process connection

## Top product features!

- Non-contact temperature sensor reliably detects hot objects up to 4500 °F (2500 °C) using long-distance sensing technology
- Additional features such as plug-and-play replacement, real-time recipe changes and diagnostic feedback
- Digital transmission of process value eliminates analog signal drift and noise
- Integrated LED aiming pointer for alignment and control
- Integrated scratch-resistant precision quality lens for reliability in extremely harsh environments

## Compact infrared temperature sensor for detecting objects with temperatures up to 4500 °F

Many industries involve detection of objects that are too hot for the use of standard position sensors, such as in the manufacturing of asphalt, steel, glass, or ceramic products. ifm's TW Series non-contact infrared temperature switch is designed to detect objects ranging in temperature from 32 to 4500 °F.

The TW sensor solves these applications by detecting the infrared radiation emitted by the object and converting it into an output signal. The TW2 sensor provides an accurate temperature measurement based on the target emissivity.

### High precision in a robust housing

ifm's TW temperature series features a compact robust housing. The integrated scratch-resistant precision quartz lens with anti-reflective coating provides minimum sensitivity to scattered light for reliability in extremely harsh environments.

The TW is available with an M12 Micro quick disconnect connector. For mounting restrictions with limited space, fiber optic units are available. A special lens attachment is required in this case.

### Easy setup

Outputs can easily be set using the pushbuttons and digital display of the sensor or via IO-Link.

The TW Series temperature sensor can be used to detect a hot steel slab by measuring the infrared radiation intensity emitted from the hot slab. The TW2 transmitter displays actual temperature of the hot slab and provides a corresponding analog signal. The TW7 switch displays a percentage of the infrared radiation intensity and provides a switchpoint set by the user.

The AS-i network connects hundreds of sensors on a single two-wire cable. AS-i I/O modules use quick plug-and-play functionality that simplifies installation.

## AS-i is a simple solution for networking actuators and sensors

An AS-interface network offers a simple, cost-efficient alternative to conventional cabling at the lowest level of the automation. This network can operate directly in conjunction with an existing PLC or can be linked to a higher-level bus system for low-cost remote I/O. AS-interface is tailored to the needs of devices such as sensors and actuators where low connection cost per node is critical and simplicity is essential.

### Global support for AS-interface

ifm efector engineers are trained on AS-interface and can help design and implement a network on industrial equipment. On-site technical support is available and application assistance is immediate by calling our technical support hotline: 800-441-8246.

### Aggressive product development

ifm is committed to investing in new product development for AS-interface. Our goal is to improve functionality, simplify installation and maintain competitive price points.

## Point-to-point wiring vs. AS-i networking

Industrial automation systems require a large amount of control devices. The number of binary actuators and sensors placed on a typical system has grown over the years.

Current methods for wiring include point-to-point connection or bus systems. However, point-to-point wiring results in large wire bundles, and bus systems can be too complex for networking simple binary devices.

As a solution to these challenges, ifm offers the Actuator Sensor interface (AS-i), a simple network for actuators and sensors. AS-i is cost-effective, easy to install, and features modular components that offer design flexibility. AS-i is a complete networking solution for industrial control applications.

### Before

Point-to-point wiring is still the most common wiring method found in industry. One cable from each device results in large wire bundles running through the system. Due to the sheer volume of wires, installation time is considerable and troubleshooting is complex.

### After

AS-i network connects multiple binary devices with only one 2-wire cable, completely eliminating wire bundles. Its simple, plug-and-play wiring supports all topologies and eliminates device profiles and expensive hardware.

▶ Visit [www.ifm.com/us](http://www.ifm.com/us) to view all AS-i networking products.

Company	IO-Link	Position Sensors						Motion Control	Vision Sensors
	IO-Link	Inductive	Capacitive	Cylinder / valve position	Photoelectrics / lasers / fiber optics	Distance / Application specific	Ultrasonic	Encoders / Speed monitors	2D / 3D inspection
1 - 5	6 - 21	22 - 55	56 - 61	62 - 71	72 - 111	112 - 117	118 - 119	120 - 127	128 - 143

**A simple 2-wire flat cable**

The normal collection of wire bundles are replaced by a single, two-wire flat cable that carries both data and power.

**Insulation displacement**

Insulation displacement technology enables fast connection to all devices. The cable is pierced to make the electric connection and features a mechanical profile to properly insure polarity.

**Flexible topology**

AS-i supports topologies including open tree, ring, star, and trunk and drop lines to allow maximum design freedom.

**Extremely fast system**

Data transfer is fast – less than 10 ms on a fully-loaded system of 248 inputs and 248 outputs.

**Cost effective**

Since actuators and sensors are among the least expensive devices on a network, their connecting hardware should be comparable in price. AS-i's price-per-point is one of the best in industry.

**Modular system**

AS-i's design flexibility makes it a true plug-and-play networking system. Modular machines can be easily connected with the aid of splitter modules to form a production line.

**Best fit**

Actuator and sensor manufacturers developed AS-i for the sole purpose of connecting actuators and sensors. Every component on the network is specially designed to fit these binary devices.

**Industrial Ethernet and AS-i networking offer the best of both worlds**

Industrial Ethernet (IE) is commonly applied as the networking protocol for automation and plant control. IE is well known in industry, can carry large packets of data, and is ideal for HMIs, PLCs, drives, and barcode scanners.

For bit-level data such as sensors and actuators – which account for 90% of devices in automation – a lower level I/O network, such as AS-i, is better suited for these devices.

AS-i offers a better alternative to wiring bit-level devices and is an ideal complement to Industrial Ethernet at the I/O level. A single Ethernet IP address can transmit up to 992 I/O points.

AS-i uses quick plug-and-play functionality that simplifies installation in the controls architecture.

**ifm is an AS-interface founding member**

ifm efector is one of 11 founding members of the AS-interface Association, established in 1990. AS-i is a non-profit independent organization that is currently supported by more than 100 vendors worldwide.

**Dedicated sales engineers**  
ifm's experienced sales engineers understand your applications and provide solutions to your challenges.

# AS-i system overview

All of the components needed to create a complete AS-i system are illustrated in this overview. Because of its flexibility, an AS-i system has unlimited design capabilities. Choose from a variety of masters, I/O modules, power supplies and accessories depending on your current controls platform and application environment.

**1 AS-i Master / Gateway**  
Controls the data transfer for the AS-i network.

**2 AS-i Power Supply**  
Couples power and signal together for transmission over the 2-wire flat cable.

**3 Cabinet Module**  
Designed to be an inexpensive solution for connecting control cabinet I/O to the AS-i network.

**4 Compact Field Module**  
Designed specifically for harsh environments.

**5 Quick Slide Field Modules**  
IP67 module features a mounting technology that does not require tools for installation.

**6 Quick Slide Pneumatic Output Modules**  
4 inputs and 1 or 2 solenoid outputs integrated into one housing.

**7 Splitter Module**  
Allows for maximum flexibility in both the design and commissioning phases of a project.

**AS-i controller can connect to:**

- Ethernet IP
- Profinet
- Profibus-DP
- DeviceNet

**Technical Specifications:**

- 62 nodes per master
- 4/140 maximum per node (248 inputs/248 outputs per master)
- 100 m network length (up to 300 m with repeaters)
- Less than 10 ms scan time on a fully loaded system (62 nodes)

## Controllers and gateways

- AS-i Controllers provide direct connection of AS-i to EtherNet/IP, Profibus and to DeviceNet
- AS-i Backplane Masters provide connection of AS-i to most PLCs
- Single or dual master options available for application versatility
- User friendly display for setup and diagnostics

Type	Number of AS-i Masters	Programming Data Interface	Fieldbus Interface	AS-i Version	Current Consumption From 24 V DC (mA)	Current Consumption From AS-i (mA)	Part No.	List Price (1-pc.)

## AS-i power supplies

- High efficiency design generates less heat and eliminates external cooling
- Couples and de-couples power and signal for transmission over the network
- Compact housing with DIN rail occupies minimal cabinet space
- Selectable 115 / 230 VAC input voltage with short circuit and overload protection

Type	Dimensions (mm)	Output Current AS-i (A)	Output Voltage AS-i (V)	Nominal Voltage (V)	Efficiency (%)	Part No.	List Price (1-pc.)

## I/O field modules for industrial automation

- Field modules feature digital inputs and/or digital outputs
- Modules offer three directions of rotation for AS-i cable that provide flexible installation
- Simple mounting, no tools required

Type	Dimensions (mm)	No. of Inputs	No. / Type of Outputs	Max. Input Current per Module (mA)	Output Current per Channel / Total (A)	AS-i Profile	AS-i Version	Extended Addressing Mode	Part No.	List Price (1-pc.)

## I/O modules for harsh environments

- Stainless steel modules for use in harsh applications
- Resistant to standard cleaning agents (Ecolab tested)
- AS-i and 24 V supply via common M12 connector
- For direct use in wet areas (protection ratings IP 68 and IP 69 K)
- AS-i splitters – high-grade stainless steel flat cable insulation displacement connector suitable for field use

### Technical Specs

Output voltage (AS-i):	18...31.6 V DC
Current consumption:	< 180 mA
Current rating per module:	150 mA
Short circuit protection:	yes
Overload protection:	yes
Ambient temperature:	-25...55 °C
AS-i specification:	2.11 + 3.0
Extended addressing mode:	yes
Housing material:	potted PC

## Simplify Your Safety Wiring

For networking safety components, point-to-point wiring is still the most common wiring method on industrial machines. This type of wiring results in large wire bundles running through the system. Due to the sheer volume of wires, installation time is considerable and troubleshooting is complex.

ifm's Safety at Work system is a simple solution for integrating all of your safety components with one two-wire cable. Its plug-and-play wiring supports all topologies and can be connected to most standard PLCs and higher level networks.

## Seamless Integration of Safety Components

ifm efector's Safety at Work system connects safety-related components directly to the AS-i network to provide seamless integration into standard PLCs and higher level industrial networks.

Mechanical safety components such as door switches, emergency stop buttons and safety input modules are connected with the AS-i two-wire cable that carries power and signal to each safety device. The system simplifies wiring by eliminating wire bundles that form when connecting numerous input/output devices.

Plug-and-play wiring reduces installation time and eliminates junction boxes and additional input cards. The system provides fast and flexible expansion. Any modifications to the system, such as changing or adding e-stop buttons can be made quickly and easily. Safety zones can be configured and changed through a drag-and-drop configuration software.

The Safety at Work system provides status indication and diagnostic information for each safety device. The system offers increased diagnostic feedback for trouble-shooting and indicates where and when a fault occurs – without the need for additional wires for feedback.

Conventional point-to-point wiring can be very time consuming and costly

ifm's Safety at Work saves time by eliminating the need to individually wire each safety device back to the main control cabinet.

Visit [www.ifm.com/us](http://www.ifm.com/us) to view all Safety at Work networking products.

Company	IO-Link		Position Sensors				Motion Control		Vision Sensors	
	IO-Link	Inductive	Capacitive	Cylinder / valve position	Photoelectrics / lasers / fiber optics	Distance / Application specific	Ultrasonic	Encoders / Speed monitors	2D / 3D inspection	
1 - 5	6 - 21	22 - 55	56 - 61	62 - 71	72 - 111	112 - 117	118 - 119	120 - 127	128 - 143	

**Saves wiring time**

Safety at Work is plug-and-play. Connect an entire safety system with one cable that carries both data and power. This eliminates the need to individually wire each safety device back to the main control cabinet.

**Simplifies design and build time**

With less wires to handle, termination points are reduced. The system uses minimal cabinet space and machine drawings are less complex.

**Saves time in disassembly and rebuild**

Save installation and reduce rebuild-time by days. Equipment can be disassembled and rebuilt faster with Safety at Work's single-cable design.

**Provides diagnostic feedback**

The Safety at Work system provides increased diagnostic feedback for trouble-shooting. The system indicates where and when a fault occurs without any additional wiring.

**Simple zone control**

No more wiring changes! Safety zones can be configured easily and changed through a drag-and-drop configuration software.

**Universal connectivity**

The Safety at Work system can be used directly with most major PLCs including Allen Bradley and Siemens, as well as, DeviceNet, Profibus, and Ethernet bus systems. There are no requirements for special safety PLCs.

**Flexible topology**

The Safety at Work system can be configured in ring, star, and trunk and drop topologies. The system is also capable of handling multiple safety zones on one network.

**Implements standard safety devices**

The system is designed to use standard mechanical safety devices including door switches and e-stop buttons. There are no requirements to use system specific I/O devices.

**Approved technology**

Complies with the requirements: Type 4 (IEC 61496-1), SIL 3 (IEC 61508), SILcl 3 (IEC 62061) and PL e (EN ISO 13849-1)

**Internationally approved**

An international consortium of automation suppliers designed Safety at Work to reduce the cost of connecting widely distributed safety I/O. The Safety at Work system is the first fully-approved industrial safety networking system. The system is rated by TUV for up to SIL 3 according to IEC 61508, IEC 62061, and PL e according to ISO 13849-1.

The Safety at Work system uses the internationally accepted AS-i protocol. With over 3 million nodes installed, AS-i has been a major success in automation since 1994.

## Safety at Work system overview

Safety at Work utilizes the standard AS-i protocol. This provides the backbone for the system to transmit safety-related information. The basis is the transmission of dynamic code sequences (8x4-bit data sequence) which are stored in every safety module.

During installation and start-up, the safety monitor must learn these code sequences. While in operation the safety monitor constantly compares the target sequence with the current sequence of the safety module. If the safety module provides a wrong code sequence (e.g. 4x0 bit), the safety monitor switches to the safe state.

- ✓ Saves wiring time
- ✓ Simplifies design and build time
- ✓ Provides diagnostic feedback without additional wires
- ✓ Saves time in disassembly and rebuild
- ✓ Simple expandability
- ✓ Approved technology to IEC61508 and EN ISO13849
- ✓ Simple zone control up to 8 safety zones

### Controllers and Gateways

Various controller options are available to fit directly to a plc or connected to higher-level networks such as EtherNet IP, Profibus, etc. A stand-alone option is available that can act as a plc.

See page 229.

### Power Supplies

Safety-at-Work power supplies provide power for network modules and input devices. Also, 24 VDC power supplies are used to provide power to output devices over the Safety-at-Work network.

See page 230.

### Safety Relays

ifm safety relays, or monitors, evaluate the data exchange between the safety modules and the Safety-at-Work controls. If the data transmission is disrupted or a wire-break occurs, the safety relay will fail to safe.

See page 244.

All of the components needed to create a complete Safety at Work system are illustrated in this overview.

Because of its flexibility, a Safety at Work system has unlimited design capabilities.

Choose from a variety of controllers, I/O modules, power supplies and accessories depending on your current controls platform and application environment.

**Safe input modules**

I/O Modules are used to connect standard safety devices such as e-stops, door switches and light curtains to the Safety-at-Work System.

See page 246.

**E-stop**

Fully functional ifm e-stop buttons are designed to directly interface with the Safety at Work system.

Available with LED indication or key release.

See page 246.

**Guard Locking Door Switches**

AS-i door switches with guard locking have the function to keep moving-equipment safe as long as a dangerous state is present.

See page 248.

**Wiring Solutions**

Various AS-i splitters and branching modules can be used to provide maximum flexibility when designing and commissioning a project.

See page 238.

**Accessories**

A variety of accessories are available to help connect nodes and periphery devices to the Safety-at-Work system. In addition, products for extending the network, diagnosing faults and addressing modules are also available.

See page 239.

## Top product features!

- 2 safe electronic outputs locally, 6 triggerable outputs in the field
- 4 safe inputs or 8 standard inputs/outputs locally
- Configurable with an easy to use drag-and-drop software
- Saving of data on chip card for an easy exchange of units
- Certification to EN 62061/ SIL3, IEC 61508 / SIL3 and EN ISO13849-1/PLe

## Safety made simpler with ifm's basic safety monitor

ifm's safety relay (monitor) evaluates the data exchange between safety modules and the AS-i controls. If the data transmission is disrupted or a wire break occurs, the safety monitor will fail to safe.

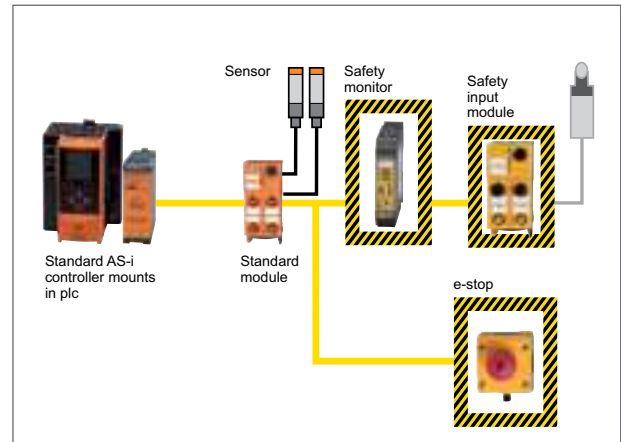

As a component of the AS-i Safety at Work system, the safety relay monitors the code sequences that are to be transmitted. In the case of message deviations or timeouts, the AS-i safety monitor ensures the safe state of the system. The new AS-i safety monitor processes up to four safe inputs or eight standard inputs / outputs locally and up to 31 safety modules / intelligent e-stops. One AS-i safety relay can replace many traditional safety relays.

The ASIMON configuration and diagnostic software provides clear and quick assignment of the safety-related components via a simple drag-and-drop interface.

Safety relay functions such as "e-stop", "stop categories 0 or 1", "two-hand operation", "enable switch" can be monitored via the software.

The safety monitor can be retrofitted on existing AS-i installations. Safe and non-safe I/O signals can be transmitted via the same system bus. All controllers, power supplies and bus components can still be used.

The Safety at Work system simplifies wiring by eliminating wire bundles that form when connecting numerous input / output devices. The system provides an ideal safety solution for industries such as conveying, special machines, material handling and the food industry.

## Top product features!

- Easy connection of standard mechanical safety devices including door switches and E-stop buttons
- Non-safe relay outputs and LED output options available
- Rated up to category 4 according to EN954-1 and SiL 3 according to IEC61508
- 2-wire flat cable carries power and signal to each safety device
- Up to 50% reduction of installation in the field

## A variety of safety I/O modules to fit your fail-safe requirements

ifm offers a variety of input/output modules that receive safe and mechanical input signals. The AS-i safety controller communicates the input signals to intelligent safety devices, such as e-stops and door switches within the Safety at Work system.

Both field and cabinet modules are available. ifm safety field input modules do not require any tools. Connection is simple and is made via the AS-i system flat cable. Cabinet modules simply mount on din rail.

Safety pcb modules are available for pushbutton applications.

Modules are available with a standard output signal and can be used with your mechanical safety devices.

**Simple mounting saves time!**

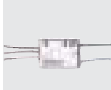

ifm's quick slide safety modules (Part No. AC5055) offer simple mounting. The module can accept the AS-i flat cable in three different directions to provide flexible cable routing.

## Top product features!

- Up to 31 safety door switches can be connected per network
- Solenoid lock is rated for 2500 N force
- Large LEDs for easy status and fault indication
- Rotatable actuating head for different mounting positions
- Suited for applications up to PLd according to EN ISO 13849-1 standard

## Safety at Work intelligent door switches with guard locking

ifm's intelligent safety door switches are safety switches with an integrated solenoid lock which allow the user to implement interlocking devices according to EN 1088.

An integrated locking mechanism keeps protective doors securely locked while equipment is operating within an enclosed guarded area.

ifm safety door switches are typically mounted on the frame of the guard door. Generally the key is mounted on the moving door and the switch body is mounted to the framing so that when the door closes, the key is fully inserted into the switch.

The door switch is connected to an input module via the AS-i system cable. AS-i reduces wiring time and is the protocol for the Safety at Work system.

As AS-i safety input signals are received by the intelligent door switches, the solenoid monitoring contacts are detected. AS-i output signals trigger the guard locking solenoid and the green/red LEDs for feedback. Evaluation is made via an AS-i safety monitor.

## Top product features!

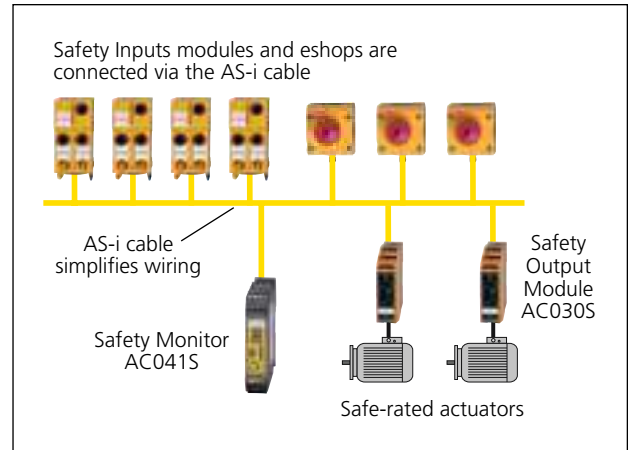

- 1 dependent safety relay output, double channel forced contacts
- 4 standard inputs (e.g. for start, EDM, etc.)
- Control category 4 according to EN 954-1, IEC 61508 / SIL 3 and EN 13849 / PL e
- 1 Local LED output (alarm) and 1 process output for optional start validation requests
- Create up to 6 independent safety zones

ifm's safe output module for the control cabinet AC030S incorporates data technology that can provide a safe output signal to motor starters or valve assemblies.

The output module is controlled by safety relay monitor, AC041S, which can be configured by using its diagnostic software ASIMON V3.0.

In conjunction with safety relay monitor, AC041S, up to 6 additional independent safety zones can be established. Each safety output module AC030S provides a decentralized safety output in the field for control of the safe-rated actuators.

The Safety at Work system simplifies wiring by eliminating wire bundles that form when connecting numerous input / output devices. The system provides an ideal safety solution for industries such as automotive assembly, conveying, special machines, material handling and the food industry.

The new Safety at Work output module enables decentralized control of actuators. Each module is mounted in the control cabinet and is connected to an actuator via the AS-i cable. In the example above, the output module is controlled by the AC041S Safety Monitor, which can ensure a safe state of the actuators.

## Top product features!

- 4-port RFID controller configurable for read/write antennas or digital inputs and outputs
- Configuration through built in web page which includes read/write capability
- Standard non-shielded M12 cables between antenna and controller
- 13.56 MHz system uses standard ISO 15693 tags for global compatibility
- Integrated Ethernet switch can be used to daisy-chain devices

## RFID high frequency system for tracking high speed processes

**NEW!** ifm's RFID DTE identification system is used to track, control and improve the quality of products throughout the automation process. ifm's DTE, RFID solution offers an easier and less expensive way to implement RFID. Widely used in conveying, mold / die management and pallet tracking, the DTE system is capable of reading and writing data at high speeds and can connect to all common plc's and industrial bus systems.

The robust DTE controller contains a built-in web-based tool for device setup, diagnosis and monitoring. Setting up the device can be done conveniently from the user's desk, without connection to a field bus system, for example, and thus allows the system to be tested prior to installation. No external software is necessary for configuring.

ifm's RFID antennas are tubular and rectangular shaped with M12 connection and can be used in applications where space is restricted. The read / write antennas are simply connected to the DTE controller with M12 patchcords. Because the devices use industry standard M12 connectors, no complicated wiring is necessary.

ID tags (transponders) are easy to mount to pallets or work-piece carriers. Information is quickly exchanged from the ID tag and the read / write antenna and transferred to the DTE controller providing an accurate real-time location, or any other parameters that have been set, of the pallet.

**A** Standard non-shielded M12 cables are used between antenna and controller

**B** No external software: Configuration through built-in web page

**C** No handheld RFID tool required: Web page allows for read and write capabilities

**D** Device parameters can be downloaded by the PC/PLC for easy hardware replacement

**E** Durable IP67 housing

**F** 13.56 MHz system uses standard ISO15693 tags for global compatibility

**G** Integrated Ethernet switch can be used to daisy chain devices

## Top product features!

- Easy-to-use sensors make vibration monitoring simple for prevention of machine downtime
- Monitoring in accordance with recognized industrial standard for machine protection (ISO 10816)
- VKV sensors combine both switching function and transmitter in one small package
- VTV transmitter is IP69K and made of 316L stainless steel for use in harsh environments
- VNB transmitters include display and provides trend history

## ifm's compact vibration sensors detect changing conditions of machinery for early warning of machine damage

In most industrial plants, every piece of equipment has its own vibration level that can change when it experiences unusual operating conditions. These changes can indicate potential machine damage or failure.

ifm's vibration sensors are designed to permanently mount on a machine to continuously monitor the machine's vibration level. By detecting vibration level changes when they first occur, these sensors can prevent equipment from catastrophically failing, reduce secondary damage and eliminate expensive downtime.

The VK, VT and VNB sensors monitor vibration levels on:

- Motors
- Pumps
- Compressors
- Fans
- Centrifuges
- Vibratory feeders

ifm's vibration sensors offer the advantages of high performance vibration monitoring devices for a fraction of the price.

### VK vibration monitor

Transmitter with switching output  
Setpoint via rotatable dials  
Operating status LEDs

### VT vibration monitor

Transmitter with time delay  
Robust 316 stainless steel housing  
Rated IP69K for harsh environments

### NEW! VNB vibration monitor with digital display

Display shows real-time vibration level and alarm status  
Memory stores time-stamped trend history  
Easy setup via two pushbuttons; free software available for VNB211

## Top product features!

- Cost-effective real-time vibration monitoring system
- Direct Ethernet connectivity for remote monitoring of machine condition
- Digital and analog alarm outputs
- Time stamped internal memory for trend history
- Easy to use configuration and analysis software

### Real-time vibration monitoring

By continuously monitoring a machine's condition, unforeseen problems can be identified and addressed. Vibration analysis protects machine components, tools and workpieces during machining against costly consequential damage and avoids scrap.

ifm's multiplex vibration monitor provides specific vibration analysis on components inside a machine such as rolling element bearings, rotational unbalances, and gear drives.

The system consists of a cabinet-mount diagnostic module, model VSE, and multiple compact accelerometers that are mounted permanently on the equipment.

The condition of the equipment is continually monitored and evaluated for any changes in the operating parameters. Time and frequency domain data is locally processed for triggering of the integrated programmable analog and digital outputs, or for transmission to SCADA systems via the integrated Ethernet communication port.

Programming of the monitor is straightforward with the user-friendly configuration software.

*Analysis tools included in the programming software give you the ability to remotely evaluate machine conditions. For example: the green / yellow / red damage level screen allows for a quick check on monitored components condition.*

*Pumps, blowers, ventilators, and cooling towers are monitored for unbalance, bearing damage, and general vibration levels using the VSE Multiplex system.*

*Accelerometers type VSA are connected to VSE units to monitor critical components of the process (pumps, motors, agitators).*

## Top product features!

- In-line flow meter monitors compressed air systems and specialty gases (Ar, CO<sub>2</sub>, N<sub>2</sub>)
- Monitors air and gas consumption to identify leakage areas and improve energy efficiencies
- Optimizes air and gas usage and improves system performance
- Totalizer function monitors overall compressed air and gas usage in a plant
- Units mounted on integrated pipes ensure easy installation

### efector metris compressed air and specialty gas meter

efector Metris monitors compressed air and specialty gases such as argon (Ar), carbon dioxide (CO<sub>2</sub>), and nitrogen (N<sub>2</sub>) to detect leakage areas and improve energy efficiencies. Compressed gases are considered one of the most expensive sources of energy consumption in a plant. By identifying leakage areas, efactor Metris can optimize compressed gas usage, improve system performance, and reduce energy costs.

The compact sensor is fitted with an integrated pipe to ensure easy mounting and proper installation depth. The sensor's 4-digit numeric display provides air and gas consumption readings and features

microprocessor-based pushbutton setup. Three display options are available: standard cubic feet per minute, standard cubic feet per hour, and total consumed standard cubic feet. The 24 VDC unit provides switching, analog and pulse output options.

#### Operating principle

efector Metris incorporates two ceramic sensing elements that each contain a thermistor.

As one sensor element is heated, the second element is used as a reference. Power is then altered to the heater to ensure a constant temperature difference (CTD) between the two elements.

With its integrated pipe length, efactor Metris ensures easy installation and proper mounting configuration.

### Technical Specs

Supply voltage: 19...30 VDC  
 Maximum load current: 2 x 250 mA  
 Maximum relative air humidity: 90%  
 Pressure rating: 230 psi (16 bar)  
 Medium temperature range: 32...140 °F (0...60 °C)  
 Wetted parts: 304 stainless steel, ceramics, passivated glass, PEEK, polyester, Viton, anodized aluminum  
 Protection: IP65

## Top product features!

- Wide input range, single phase 100...240 V AC  $\pm 10\%$
- Robust metal housing or compact plastic housings occupy minimal control cabinet space
- Extra power due to "power boost" design
- Energy-saving efficiencies up to 94% generate less heat and eliminate the need for external cooling
- Short-circuit and overload protection

## Low power loss ensures uptime

**NEW!** ifm's power supplies are designed to provide the voltage supply for sensors, actuators, controllers, and other electronic loads. These new power supplies are compact and lightweight, generating less heat and occupying minimal space in control cabinets. Models operate from a wide input voltage range with short circuit and overload protection, including "no-hiccup" short circuit operation.

ifm's switched-mode power supplies have a typical regulated output voltage of 24 VDC. Between no-load and full-load, they ensure stable supply voltage and operational reliability in case of supply voltage fluctuations. Line voltage fluctuations up to  $\pm 15\%$  as well as line interference can be compensated for and not passed on to the load. They have a high peak current capacity for inductive load switching and do not shut down or fold-back due to the high inrush currents required.

Each power supply undergoes a comprehensive test procedure including high frequency and high current load switching. To further insure reliability, all power supplies are fully burned in at elevated temperatures.

With its "power boost" design, ifm's power supplies provide up to 50% extra power above the rated load for up to 5 seconds. This additional power allows for difficult loads to start, such as motors.

## Technology Comparison

Features	Low cost Brand A	Good performance Brand B	ifm's DN4012	Why is this important?
<b>Power Supply Efficiency</b>	86%	90%	90%	<b>Efficiency reduces cabinet space:</b> A more efficient power supply generates less heat in a cabinet. This allows a smaller enclosure to be designed, which reduces machine size and saves in build costs. ifm's new power supplies are designed to generate less heat and can be mounted in smaller cabinets.
<b>Inrush Current</b>	24 A	15 A	3 A	<b>Limiting inrush current reduces cost:</b> ifm's microprocessor-controlled inrush current limiter ensures minimum inrush current. This allows the option to use smaller circuit breakers and thinner gauge wires, which reduces the overall cost of the system.
<b>Housing Size</b>	63.5 x 142 x 116 mm	40 x 130 x 125 mm	40 x 124 x 127 mm	<b>Compact housing size reduces cabinet space:</b> Cabinet space is a valuable commodity. ifm's new slim-line power supplies occupy less space. Therefore, smaller enclosures may be designed resulting in considerable cost savings.
<b>Mean Time Before Failure</b>	450,000 hrs.	635,000 hrs.	869,000 hrs.	<b>High MTBF increases reliability:</b> Mean Time Between Failure (MTBF) values indicate the quality and reliability of the unit. ifm power supply's high quality components ensure long life in application.
<b>AC Buffer Times</b>	None	None	80 ms	<b>AC buffering increases reliability:</b> AC lines can be affected by EMC and other factors leading to an unstable AC input voltage and can cause a disruption on the 24 VDC side. Longer buffer times allow for brief disturbances on the AC input line without affecting the 24 VDC output power. ifm's power supplies are designed with AC buffering capability.
<b>Power Reserve</b>	None	20%	20%	<b>Additional power reserve increases reliability:</b> The ability to provide a continuous current beyond standard specifications allows difficult loads, such as motors, to start. ifm's power supplies provide 20% extra current to ensure uninterrupted operation.

## Top product features!

- Provides regulated 24 VDC power for 2 or 3-wire position sensors
- Suitable for PNP or NPN switching sensors
- Extra-slim housing with wide input operating voltage range
- Single and dual channel versions
- High sensor supply current: 24 VDC / 300 mA

## AC to DC Converters

Switching amplifiers are used for powering DC sensors in AC voltage environments and for switching higher current loads or AC voltage.

The new switching amplifiers by ifm have a compact housing and mount on standard 35 mm DIN rail. Both one and two-channel models are available. Their wide input voltage range allows them to be powered with both 120 V AC and 220 V AC power sources. Additional features include plug-in terminals for simple installation and selectable PNP or NPN sensor inputs.

One-channel switching amplifiers are suitable for a sensor with one output, the dual channel types are suitable for a sensor with two outputs or two sensors with one output each. Current consumption must be taken into account.

### Single channel - Part No. DN0210

Provides regulated 24 VDC power for 2- or 3-wire proximity sensors and converts the sensor signal to a relay output capable of switching up to 1250 VA. The unit can be used with either a positive-switching or negative-switching proximity switch and an LED indicates the status of the output relay.

### Dual channel - Part No. DN0220

Two integrated 3A relays enable higher current loads such as solenoids to be switched by the sensors. This dual channel AC to DC converter provides regulated 24 VDC power to 2- or 3-wire position sensors. Suitable for PNP or NPN switching sensors, the DN0220 operates on a wide input voltage range and has a high sensor supply current. The compact, corrosion-resistant housing occupies minimal control cabinet space.

Dual channel converter can be used with two sensors with one output each.

### Technical Specs

Contact rating: 4 A (240 V AC, 24 V DC); resistive load  
 Auxiliary energy for sensors: 24 DC SELV, ± 10 %  
 300 mA  
 short circuit and overload protected  
 Protection housing / terminals: IP20  
 Ambient temperature: -4...140 °F (-20...60° C)  
 Display DN0210: Power supply 1 x green LED  
 Output 1 x yellow LED (lights if output relay is energized)  
 Fault 1 x red LED  
 Display DN0220: Power supply 1 x green LED  
 Output 2 x yellow LED (lights if output relay is energized)  
 Fault 1 x red LED  
 Potentiometer: Selection PNP / NPN  
 Housing material: Plastic PC GF20  
 Mounting: Rail TH35 (according to EN 60715)  
 Connection: Unit: 4-pin terminal blocks with 5.0 mm pitch  
 Connector: 4-pin with screw connection

## Top product features!

- ifm's ecolink cordsets feature "Lock-in-Place" coupling nut that resists high levels of shock and vibration
- Cordsets offer high-flex PUR jacketed cable rated for over 5 million flex cycles
- A special insert design includes a mechanical end stop that prevents damage to viton o-ring from over tightening
- Right angle black housings feature highly-visible status indication LEDs that can be seen from farther distances

### ecolink M8 DC Pico cordsets

ifm's rugged ecolink cordsets are designed and tested to withstand the harsh conditions in industrial automation applications. The product line meets cULus approval, RoHS standards and is silicon and halogen free. The high-flex PUR jacketed cable is rated to over 5 million flex cycles. ecolink's connection technology meets the M8 standard EN 61076.

IP68 / IP69K

"Lock-in-Place" coupling nut secures the cordset to a quick disconnect sensor and resists high levels of shock and vibration.

High flex, halogen-free PUR-jacketed cable rated for over 5 million cycles.

316 stainless steel sleeve with sawtooth contour maintains optimum sealing and prevents the cordset from detaching.

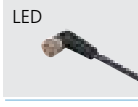

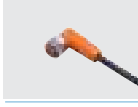

Special insert design acts as a mechanical end stop preventing possible damage to Viton o-ring from over tightening.

<b>Problem</b>	<b>Solution</b>
Traditional cordsets with transparent housings are hard to see.	ifm cordsets have high visibility LEDs with good contrast.

## Top product features!

- Redesigned 3-pin wiring block can be used as input and / or output device
- Reduces installation time and simplifies wiring
- Power and signal LED displays for quick and accurate troubleshooting
- Additional O-ring seal between M12 connector and housing
- Smaller housing for applications with limited mounting space

## M8 wiring block systems offer quick installation and eliminate junction boxes and terminal strips

**NEW!** Eliminate junction boxes and terminal strips and make your wiring plug-and-play. ifm's **ecolink** wiring block systems ensure quick connection in industrial automation applications. Available in 4-port and 8-port configurations.

ifm's newly redesigned wiring blocks offer a higher protection rating (IP68) due to an additional O-ring seal between the M12 connector and housing. The block is manufactured with a smaller, more robust housing for low-profile mounting in applications with tight mounting space. The blocks meet the requirements of Class II protection insulation.

ifm's wiring block systems are vibration and shock resistant. Status indication LEDs indicate power and output at each port location. Dust caps and labels are provided with each port.

### ecolink M8 patchcords ensure reliable connection

In addition to ecolink cordsets, ifm manufactures patchcords with the same reliable features such as "lock-in-place" coupling nuts, mechanical end stops that protect O-rings and stainless steel sleeves that maintain optimum sealing.

Cable lengths range from 0.3 meters to 5 meters.

Patchcord options include:

- straight / straight design
- straight / right angle design
- straight / right angle with status LED

### Wiring block systems:

- 4-port quick disconnect
- 4-port prewired
- 8-port prewired

### Technical Specs

Operating voltage: 10...30 VDC, PNP  
 Housing material: PBT  
 Contacts: Gold plated  
 Receptacle housing: Nickel-plated brass  
 Temperature range: -25...90 °C  
 LEDs: Power, green; output, yellow  
 Cable: PUR  
 Protection rating: IP68

## Top product features!

- New 4-pin wiring block with improved design can be used as input and / or output device
- Quick installation and simplified wiring
- Power and output LED indication for fast troubleshooting
- Increased IP68 protection rating due to additional O-ring seal between M12 connector and housing
- Smaller, more robust housing offers low-profile mounting

## M8 wiring block systems offer quick installation and robust housings

**NEW!** Eliminate junction boxes and terminal strips and make your wiring plug-and-play. ifm's **ecolink** wiring block systems ensure quick connection in industrial automation applications. Available in 4-port and 8-port configurations.

ifm's newly redesigned wiring blocks offer a higher protection rating (IP68) due to an additional O-ring seal between the M12 connector and housing. The block is manufactured with a smaller, more robust housing for low-profile mounting in applications with tight mounting space. The blocks meet the requirements of Class II protection insulation.

ifm's wiring block systems are vibration and shock resistant. Status indication LEDs indicate power and output at each

port location. Dust caps and labels are provided with each port.

### ecolink M8 patchcords ensure reliable connection

In addition to ecolink cordsets, ifm manufactures patchcords with the same reliable features such as "lock-in-place" coupling nuts, mechanical end stops that protect O-rings and stainless steel sleeves that maintain optimum sealing.

Cable lengths range from 0.3 meters to 5 meters.

Patchcord options include:

- straight / straight design
- straight / right angle design
- straight / right angle with status LED

### Wiring block systems:

- 4-port quick disconnect
- 4-port prewired
- 8-port prewired

### Technical Specs

Operating voltage: 10...30 VDC, PNP  
 Housing material: PBT  
 Contacts: Gold plated  
 Receptacle housing: Nickel-plated brass  
 Temperature range: -25...90 °C  
 LEDs: Power, green; output, yellow  
 Cable: PUR  
 Protection rating: IP68

## Top product features!

- ecolink cordsets feature "Lock-in-Place" coupling nuts that resist high levels of shock and vibration
- Available with high-flex PUR cable rated for over 5 million flex cycles or weld slag resistant cable rated for over 2 million cycles
- Special insert design acts as a mechanical end stop preventing possible damage to Viton o-ring from over tightening
- Materials of construction tested to withstand harsh conditions and aggressive oils and coolants
- Cordsets feature a broad operating temperature of -25 to 90 °C with cULus approval

## ecolink M12 Micro DC cordsets

ifm's ecolink M12 cordsets are designed and tested to resist harsh conditions in industrial automation and oils and coolants. The product line meets cULus approval, RoHS standards and is silicon and halogen free. The high-flex PUR jacketed cable is rated to over 5 million flex cycles. ecolink's connection technology meets the M12 standard EN 61076.

## A variety of rugged cordsets to fit most applications

ifm ecolink cordsets are available in a variety of configurations and cable lengths for application versatility. The family includes right angle models with LEDs, standard straight cordsets, standard right angle cordsets and patchcords.

The 316 stainless steel sleeve with sawtooth contour maintains optimum sealing and prevents the cordset from detaching.

## High temperature coolant test

Sensors and cordsets are completely submerged in industrial oils and coolants for a prolonged period at a temperature of 176° F.

Following the test, the product's characteristics and zero-leak design are verified for reliable operation.

## Top product features!

- Fully shielded cable and connector
- Available with metal braided shield connected or not connected to coupling nut
- "Lock-in-Place" coupling nut resists high levels of shock and vibration
- High-flex PUR-jacketed cable rated for over 2 million flex cycles
- Special insert design acts as a mechanical end-stop preventing possible damage to Viton O-ring from over-tightening

## ecolink M12 Micro DC cordsets for EMI environments

ifm's ecolink M12 shielded cordsets are designed to protect against EMI (Electromagnetic Interference), vibration and damage to the O-ring seal. The lock-in-place coupling nut design resists high levels of shock and vibration. An integrated end stop protects the O-ring from damage caused by over-tightening the coupling nut.

Industrial applications such as the plant floor are typically electrically noisy environments. The primary way to reduce EMI in cables is through the use of shielding. ifm's shielded cordsets are manufactured with a metal braided shield, high strength PUR jacket and a 2 million flex cycle rating.

The ecolink M12 product line meets cULus approval, RoHS standards and is silicon and halogen free. ecolink's connection technology meets the M12 standard EN 61076.

The 360° metal braided shield around conductors and connector provides maximum protection in environments affected by noise.

## Top product features!

- Designed to reduce installation time and simplify wiring
- Can be used as an input and / or output device
- Power and signal LED displays for quick and accurate troubleshooting
- Available with single or dual LED outputs
- Dust caps and identification labels available

## ecolink M12 wiring block systems with built-in LEDs for input and output devices

ifm's passive wiring block systems provide a rugged yet simple solution for wire consolidation in applications with a high-density of input or output connections. Wiring block systems can replace junction boxes, terminal strips and will help to prevent wiring mistakes.

When using wiring block systems, devices can be changed in seconds, greatly reducing maintenance costs.

ifm offers a wide selection of patchcords that connect to the wiring block systems.

## Robust wiring blocks withstand harsh environments

For application versatility, wiring blocks are available in cabled models as well as quick disconnect models that require an M23 quick disconnect cable for electrical connection.

## Quick connection with ecolink patchcords and blocks

Patchcords are available in cable lengths starting at 0.3 meters up to 5 meters.

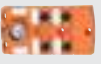

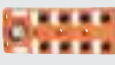

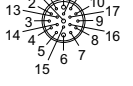

\* For 6-port and non-LED versions, visit [www.ifm.com/us](http://www.ifm.com/us). Labels and dust caps are available.

<b>Technical Specs</b>							
Operating voltage:		250 AC / 300 DC: Part Nos. EVC011 - EVC019					
Max. total current:		12 A					
Max. load current per port:		4 A					
Wiring blocks protection:		IP67 / IP68					
Patchcords protection:		IP67 / IP68 / IP69K					
Operating temperature:		-25...80 °C (wiring blocks); -25...90 °C (patchcords)

## Top product features!

- Industry standard color coding
- Vibration resistant coupling nut
- Viton O-ring
- Low-resistance contact design with gold plated contacts
- Available with PVC or TPE cable

## Rugged Micro AC cordsets are designed for industrial automation and metal forming applications

### Why choose PVC or TPE cable material

PVC (polyvinylchloride) offers excellent performance in a wide range of temperatures. PVC cables resist flame, heat, moisture and abrasion. PVC is considered the most commonly used cable jacket material in industrial automation applications.

TPE (thermoplastic elastomer) resists a broad range of oils, chemicals, acids and solvents. TPE is a high flex material and is rated for over 5 million flex cycles. It can be used in continuous flex applications such as robotic arms and grippers.

## Reliable performance

High flex TPE-jacketed cable rated for over 5 million flex cycles.

Broad operating temperature  
PVC: -20 to 80 °C  
TPE: -45 to 105 °C

Materials of construction tested to withstand harsh conditions and aggressive oils and coolants.

UL and CSA approved

## Technical Specs

Coupling nut: Nickel plated brass  
 Housing: Nylon: Part Nos. L34101, L34103, E10788, E10789  
 Contacts: Gold plated  
 Conductors size: 22 AWG  
 O-ring material: Viton™  
 18 AWG maximum: Part Nos. L34101, L34103, E10788 and E10789

## We stand behind our products

All ifm efector products are backed with the longest established warranty program in the sensor industry. All products have a 5-year warranty after the date of shipment.

ifm efector warrants that products will be free from defects in materials and workmanship. ifm efector will repair or replace any of these products which are found to be defective and which are returned to us, shipping prepaid, within one year after the defect is discovered.

This warranty is in lieu of and excluding any implied warranty of merchantability or fitness for a particular purpose and this remedy is the exclusive remedy, as ifm efector will not be responsible for any incidental or consequential damages.

### **5-year Limited Warranty:**

**Position Sensors**

**Sensors for Motion Control**

**Vision Sensors**

**Safety Technology**

**Process Sensors**

**Industrial Networks**

**Identification Systems**

**Machine Condition Monitoring**

**Systems for Mobile Machines**

**Wiring Technology**

**Power Supplies**

### **Concerning safety...**

ifm efector makes every effort to build a dependable product, but every product will eventually fail. Therefore, your equipment must be designed to prevent property damage and personal injury if our products fail.

ifm efector products are not designed to be used as stand-alone devices to protect or guard human life or limb.

Prices F.O.B. Malvern, PA. Prices and specifications subject to change without notice.

# Our people and our products are committed to helping you succeed in your business

You can count on our Service Center to be a reliable partner.

That means easy order placement and knowledgeable technical support. Your time is too valuable to waste.

Get to know us...

- Service Center staffed from 7:30 am to 6:30 pm EST.
- We strive to provide first-time call resolution.
- Our goal is to respond to emails within 15 minutes.
- Products are available from stock. 90% of orders shipped complete within 24 hours.
- You will receive a shipment tracking number within an hour of placing your order.
- Multiple shipping methods are available. Example: UPS, FedEx.
